Navigating Global Environmental Sustainability Bret L. Billet, 2023-08-22 The Great Recession provided an opportunity to reconsider how to simultaneously enhance the well being of individuals corporations countries and the global environment A half century of vital environmental data demands examining several questions pertaining to the impact of a recession on sustainable environmental consumption Does a recession provide an occasion for productive dialogue that might reconcile the ostensible incompatibility of economic and ecological rationales Does it constitute an artificial turning point whereby appropriate incentives may induce productive change Are post recession environmental consumption patterns indicative of government encouragement and corporate willingness to pursue transformative environmental technologies Alternatively are the patterns illustrative of countries transferring their environmental consumption to other countries via international trade Bret L Billet argues that the simultaneous investigation of both the Ecological Modernization theory and the Ecological Unequal Exchange theory strengthens the present quantitative analysis enhancing understanding of the recession well being sustainable environment nexus Each ecological theory is rooted in the politicized evolution of traditional theories of economic development The introduction of an Aristotelean conception of development as well being an exceptionally large number of cases and the analysis of multiple country subsets results in a more robust inquiry as to the

impact of the Great Recession on the global sustainable environment
