Ecosystems Of Disturbed Ground:

Ecosystems of Disturbed Ground L.R. Walker, 1999-12-17 As the human population inexorably grows its cumulative impact on the Earth's resources is hard to ignore. The ability of the Earth to support more humans is dependent on the ability of humans to manage natural resources wisely. Because disturbance alters resource levels, effective management requires understanding of the ecology of disturbance. This book is the first to take a global approach to the description of both natural and anthropogenic disturbance regimes that physically impact the ground. Natural disturbances such as erosion, volcanoes, wind, herbivory, flooding, and drought, plus anthropogenic disturbances such as forestry, grazing, mining, urbanization, and military actions are considered. Both disturbance impacts and the biotic recovery are addressed, as well as the interactions of different types of disturbance. Other chapters cover processes that are important to the understanding of disturbance of all types, including soil processes, nutrient cycles, primary productivity, succession, animal behaviour, and competition. Humans react to disturbances by avoiding, exacerbating, or restoring them, or by passing environmental legislation. All of these issues are covered in this book. Managers need better predictive models and robust data collections that help determine both site-specific and generalized responses to disturbance. Multiple disturbances have a complex effect on both physical and biotic processes as they interact. This book provides a wealth of detail about the process of disturbance and recovery, as well as a synthesis of the current state of knowledge about disturbance theory with extensive documentation.

Oceans P.A. Tyler, 2003-03-27 This volume examines the deep sea ecosystem from a variety of perspectives. The initial chapters examine the deep sea floor, the deep pelagic environment, and the more specialised chemosynthetic environments of hydrothermal vents and cold seeps. These environments are examined from the perspective of the relationship of deep sea animals to their physico-chemical environment. Later chapters examine the biogeography of the main deep oceans: Atlantic, Pacific, and Indian, with particular attention to the downward flux of surface-derived organic matter and how this drives the processes within the deep sea ecosystem. The peripheral deep seas, including the polar seas and the marginal deep seas: inter alia the Mediterranean, Red, Caribbean, and Okhotsk seas, are explored in the same context. The final chapters examine the processes occurring in the deep sea and include an analysis of why the deep sea has high species diversity, how the fauna respond to organic input, and how species have adapted reproductive activity in the deep sea. The volume concludes with an analysis of the anthropogenic impact on the deep sea.

Themes in Biogeography J. A. Taylor, 2019-10-01 Originally published in 1984, *Themes in Biogeography* presents a broad examination of biogeographical themes extending across the field of plant and animal ecology and geography. The book provides a detailed and unique investigation into life and its environment and delves into not just geography and ecology but provides an interdisciplinary look at these areas across both biological and environmental sciences. The book examines biogeographical themes, applying them to areas of research in soils

and climate change as well as in depth studies of plant communities and their animal associates The book also discusses plants and animals through their taxonomic distribution and deals with factors of plant geography using both global and regional examples This book will be of interest to biologists ecologists and geographers alike *Recent Hurricane Research* Anthony Lupo, 2011-04-19 This book represents recent research on tropical cyclones and their impact and a wide range of topics are covered An updated global climatology is presented including the global occurrence of tropical cyclones and the terrestrial factors that may contribute to the variability and long term trends in their occurrence Research also examines long term trends in tropical cyclone occurrences and intensity as related to solar activity while other research discusses the impact climate change may have on these storms The dynamics and structure of tropical cyclones are studied with traditional diagnostics employed to examine these as well as more modern approaches in examining their thermodynamics The book aptly demonstrates how new research into short range forecasting of tropical cyclone tracks and intensities using satellite information has led to significant improvements In looking at societal and ecological risks and damage assessment authors investigate the use of technology for anticipating and later evaluating the amount of damage that is done to human society watersheds and forests by land falling storms The economic and ecological vulnerability of coastal regions are also studied and are supported by case studies which examine the potential hazards related to the evacuation of populated areas including medical facilities These studies provide decision makers with a potential basis for developing improved evacuation techniques *A Caribbean Forest Tapestry* Nicholas V. L. Brokaw, 2012-06-28 This book explains how to foresee and manage ecosystem changes in the Luquillo Mountains in Puerto Rico by looking at underlying causes and effects The lessons from the abiotic and biotic environments populations and ecosystems in this region apply to analogous forest biomes in Central and South America as well as around the world Terrestrial Ecosystems in a Changing World Josep G. Canadell, Diane E. Pataki, Louis F. Pitelka, 2007-01-10 Over 100 authors present 25 contributions on the impacts of global change on terrestrial ecosystems including key processes of the earth system such as the CO₂ fertilization effect shifts in disturbances and biome distribution the saturation of the terrestrial carbon sink and changes in functional biodiversity ecosystem services such the production of wheat pest control and carbon storage in croplands and sensitive regions in the world threaten by rapid changes in climate and land use such as high latitudes ecosystems tropical forest in Southeast Asia and ecosystems dominated by Monsoon climate The book also explores new research developments on spatial thresholds and nonlinearities the key role of urban development in global biogeochemical processes and the integration of natural and social sciences to address complex problems of the human environment system Encyclopedia of the Arctic Mark Nuttall, 2005-09-23 With detailed essays on the Arctic s environment wildlife climate history exploration resources economics politics indigenous cultures and languages conservation initiatives and more this Encyclopedia is the only major work and comprehensive reference on this vast complex changing and increasingly important part of the globe Including 305 maps

This Encyclopedia is not only an interdisciplinary work of reference for all those involved in teaching or researching Arctic issues but a fascinating and comprehensive resource for residents of the Arctic and all those concerned with global environmental issues sustainability science and human interactions with the environment

Forest Restoration in Landscapes Stephanie Mansourian, Daniel Vallauri, 2006-02-23 Is it a sign of the times that last year the Nobel committee chose to award the Nobel Peace prize to Wangari Maathai for having planted 30 million trees We believe so We think that while in the 20th century conservation made significant progress on setting up a global protected area network the 21st century will be a time of forest restoration The fact that Wangari Maathai is the first African woman to receive such an honourable distinction is in itself a major accomplishment What is even more remarkable is that for the first time this highly esteemed prize which has long been associated with political feats was given for an environmental achievement And not just any environmental achievement but forest restoration It is a comfort to see that it is not just us at WWF the global conservation organisation who believe forest restoration to be of global significance but that the Nobel committee is in agreement

Assembly Rules and Restoration Ecology Vicky M. Temperton, Richard J. Hobbs, Tim Nettle, Stefan Halle, 2013-04-10 Understanding how ecosystems are assembled how the species that make up a particular biological community arrive in an area survive and interact with other species is key to successfully restoring degraded ecosystems Yet little attention has been paid to the idea of assembly rules in ecological restoration in both the scientific literature and in on the ground restoration efforts Assembly Rules and Restoration Ecology edited by Vicky M Temperton Richard J Hobbs Tim Nettle and Stefan Halle addresses that shortcoming offering an introduction overview and synthesis of the potential role of assembly rules theory in restoration

ecology It brings together information and ideas relating to ecosystem assembly in a restoration context and includes material from a wide geographic range and a variety of perspectives Assembly Rules and Restoration Ecology contributes new knowledge and ideas to the subjects of assembly rules and restoration ecology and represents an important summary of the current status of an emerging field It combines theoretical and practical aspects of restoration making it a vital compendium of information and ideas for restoration ecologists professionals and practitioners

Biogeography James Allan Taylor, 1984-01-01 Biogeography has been one of the great growth areas in geography in recent years with much new research work and many new developments taking place This book presents an authoritative up to date international review of all the major biogeographical themes The chapters define each theme and its place within biogeography and consider the methods of study adopted Each chapter then assesses recent trends and the latest state of the art and concludes by examining where future developments are likely Many case studies and examples are provided from throughout the world including North America

The Ecology of Place Ian Billick, Mary V. Price, 2012-08-01 Ecologists can spend a lifetime researching a small patch of the earth studying the interactions between organisms and the environment and exploring the roles those interactions play in determining distribution abundance and evolutionary change With so few ecologists and so many systems to study generalizations are essential But how do you extrapolate knowledge about a well studied area and apply it elsewhere Through a range of original essays written by eminent ecologists and naturalists The Ecology of Place explores how place focused research yields exportable general knowledge as well as practical local knowledge and how society can facilitate ecological understanding by investing in field sites place centered databases interdisciplinary collaborations and field oriented education programs that emphasize natural history This unique patchwork of case study narratives philosophical musings and historical analyses is tied together with commentaries from editors Ian Billick and Mary Price that develop and synthesize common threads The result is a unique volume rich with all too rare insights into how science is actually done as told by scientists themselves

environmental changes and how their responses affect ecosystem properties and the ecosystem services on which humans depend for survival This edition also addresses recent reports of global declines in insect abundance and how these declines could affect human interests Insect Ecology An Ecosystem Approach Fifth Edition is an important resource for researchers entomologists ecologists pest managers and conservationists who want to understand insect ecology and to manage insects in ways that sustain the delivery of ecosystem services Graduate and advanced undergraduate students may also find this as a useful resource for entomology and specifically insect ecology courses The only insect ecology text that emphasizes insect effects on ecosystem properties and services as well as evolutionary adaptations to environmental conditions Includes new material on long term trends in insect abundance addressing the so called insect apocalypse Offers crucial updates on mechanisms by which insects affect and potentially regulate ecosystem structure and function Applies ecological principles to improved management of insects for the sustainable delivery of ecosystem services Invasive Plant Ecology in Natural and Agricultural Systems Barbara Diane Booth, Stephen D. Murphy, Clarence J. Swanton, 2010 As an undergraduate text the book does a superb job of traversing the wide expanse of ecology Several chapters should be key components of any course on understanding weed ecology Biological Invasions
