**CYBER SECURITY RISK MANAGEMENT FOR FINANCIAL INSTITUTIONS** Mr. Ravikiran Madala, Dr. Saikrishna Boggavarapu, 2023-05-03 As the business developed risk management became a winding and winding road over time Modigliani and Miller 1958 found that risk management along with other financial strategies makes no sense for a firm's value creation process in an environment free of hiring costs misunderstandings and taxes It can even reduce the value of the company as it is rarely free The main motivation behind the development of risk management as a profession in recent years has been the question of the role of risk management in a value based business environment particularly finance This topic has fueled the growth of risk management as a discipline Having a reliable risk management systems infrastructure is not only a legal requirement today but also a necessity for companies that want to gain competitive advantage This happened due to the development of computing technology and the observation of a number of significant financial turmoil in recent history However the debate about the importance of risk management and the role it plays in a financial institution is still open and ongoing Regrettably a significant number of businesses continue to consider risk management to be nothing more than a defensive strategy or a reactionary measure adopted in response to regulatory concerns Non arbitrage is a fundamental concept in modern financial theory and it is particularly important to models such as the financial asset pricing model To improve one's position further one must be willing to expose themselves to a higher degree of risk When it comes to managing risks it's not just a matter of personal inclination it's also an obligation to ensure that a company is making the most money it can Because of their position in the market as intermediaries between creditors and investors banks should be
