Making Time Richard Whipp,Barbara Adam,Ida Sabelis,2002-07-04 Time is an essential feature of social and organizational life and part of the deep structure of business activity Plans performance productivity and pay are all linked to and often measured by time Yet time is often taken for granted in daily life and the business world The aim of this book is to bring time into sharper focus and in particular to look at the way time is constructed made managed and used in organizations The book both provides an overview of some of the key concepts in time time s arrow time s cycle clock time etc and it explores how particular features of the modern world global time futures etc extend and change the temporal dimension of organizational activity Making Time emphasizes the

richness of the temporal relations within organizations and the wealth of competing attempts to order and control time in the act of managing. It describes and explains this temporal complexity as it occurs in management giving full recognition to the way that people create their own sense of time alongside the official temporal apparatus of the clock and diary. The contributors use a variety of management perspectives: strategy, organization theory, decision making, industrial relations and marketing, and deliberately place the experience of more traditional industrial settings alongside those at the forefront of the new economy. *Making Time* seeks to spark a debate across the field of management that does justice to the richness of the temporal features of contemporary organizations. The book will be vital reading for those who want to understand the complexities of time in organizations and the modern world and the challenges it presents for the theoretical and practical spheres of management.

A Sociological Theory of Communication Loet Leydesdorff, 2001-01-01. Networks of communication evolve in terms of reflexive exchanges. The codification of these reflections in language that is at the social level can be considered as the operating system of society. Under sociologically specifiable conditions, the discursive reconstructions can be expected to make the systems under reflection increasingly knowledge intensive. This sociological theory of communication is founded in a tradition that includes Giddens' 1979 structuration theory, Habermas' 1981 theory of communicative action, and Luhmann's 1984 proposal to consider social systems as self-organizing. The study also elaborates on Shannon's 1948 mathematical theory of communication for the formalization and operationalization of the non-linear dynamics. The development of scientific communications can be studied using citation analysis. The exchange media at the interfaces of knowledge production provide us with the evolutionary model of a Triple Helix of university, industry, government relations. The construction of the European Information Society can then be analyzed in terms of interacting networks of communication. The issues of sustainable development and the expectation of social change are discussed in relation to the possibility of a general theory of communication.

REVIEW In this book Loet Leydesdorff sets out to answer the question: Can society be considered as a self-organizing autopoietic system? In the process, Leydesdorff develops a general sociological theory of communication as well as a special theory of scientific communication designed to analyze complex systems such as the European Information Society. From review in JASIST 53:1, 2002, 62-63.

Hidden in Historicism Harry Jansen, 2020-06-10 Hidden in Historicism considers how the nineteenth century philosophy of historicism depicts three forgotten time regimes a time of rise and fall an ambiguous time of synchronicity of the non synchronous and a time in which decisive moments dominate Before the eighteenth century time was past oriented This inverted in the Enlightenment when the future became dominating Today this time of progress continues to be embraced as a time of the modern Yet inequality increasing violence and climate change lead to doubts over a bright future In this book Harry Jansen moves away from the heritage of Reinhart Koselleck and his single time of the modern towards a historicist threefold temporal approach to history writing In the time regime of the twenty first century past present and future coexist It is a heterogeneous time that takes on the three forms of historicism Jansen's study shows how all three times exist together in current historiography and contribute to a better understanding of the world today Based on the idea that an incarnated time rules everything that happens in reality the book offers a fresh perspective on the ongoing discussion about time and time regimes in contemporary philosophy and theory of history for students and scholars both time specialists and the non specialist

The digital age places premiums on just in time deliveries continual innovation instantaneous connectivity and around the clock availability. While some celebrate this 24/7 culture others see it as profoundly destructive to the natural rhythm of day and night and to human happiness. Beginning its examination around 1900 when rapid modernization was accompanied by comparably intense reflection on changing temporal experience *Precarious Times* provides historical depth and perspective to current debates on the digital now. Expanding the modern discourse on time and speed Fuchs deploys such concepts as attention slowness and lateness to emphasize the uneven quality of time around the world.
