

Introduction

Peptic stress ulcers are said to be caused by an increase in stress among other factors. Primarily, ulceration of the stomach lining is caused by the *Helicobacter Pylori* infection or the use of Nonsteroidal anti-inflammatory drugs. Some studies have shown that psychological stress is one of the causes of stomach ulcers while some refute these claims by stating that stomach ulcers are caused by the bacteria and that stress aggravates as opposed to being the root cause. To be able to answer these questions, the paper is an annotated bibliography that will provide insight into the occurrence of stomach ulcers in individuals and the causes of this ulceration. Psychological stress can, however, be perceived as one of the causes of stomach ulceration in individuals.

The sources of the following studies are from credible databases, and they have been peer reviewed which helps in validating the information provided in the studies. Some of the problems encountered in the writing of the paper was being able to select the studies that relate to the topic, and thus the use of an inclusion criterion was helpful.

Levenstein, S., Rosenstock, S., Jorgensen, T., & Kart, R. (2015). Psychological Stress Increases Risk for Peptic Ulcer, Regardless of *Helicobacter Pylori* Infection or Use of Nonsteroidal Anti-inflammatory Drugs. *Clinical Gastroenterology and Hepatology*, 13(3), 498-506.

Evaluating Critical Care William J. Sibbald, Julian F. Bion, 2002-01-21 Measuring the quality of a complex service like critical care that combines the highest technology with the most intimate caring is a challenge Recently consumers clinicians and payers have requested more formal assessments and comparisons of the quality and costs of medical care 2 Donabedian 1 proposed a framework for thinking about the quality of medical care that separates quality into three components structure process and outcome An instructive analogy for understanding this framework is to imagine a food critic evaluating the quality of a restaurant The critic might comment on the decoration and lighting of the restaurant how close the tables are to each other the extent of the wine list and where the chef trained These are all evaluations of the restaurant structure In addition the critic might comment on whether the service was courteous and timely measures of process Finally the critic might comment on outcomes like customer satisfaction or food poisoning Similarly to a health care critic structure is the physical and human resources used to deliver medical care Processes are the actual treatments offered to patients Finally outcomes are what happens to patients for example mortality quality of life and satisfaction with care Table 1 There is a debate about which of these measurements is the most important measure of quality
