Efficient Algorithms For Listing Combinatorial Structures:

Efficient Algorithms for Listing Combinatorial Structures Leslie Ann Goldberg, 1993-04-22 This thesis is concerned with the design of efficient algorithms for listing combinatorial structures. The research described here gives some answers to the following guestions which families of combinatorial structures have fast computer algorithms for listing their members What general methods are useful for listing combinatorial structures. How can these be applied to those families that are of interest to theoretical computer scientists and combinatorialists Among those families considered are unlabeled graphs first order one properties Hamiltonian graphs graphs with cliques of specified order and k colorable graphs Some related work is also included that compares the listing problem with the difficulty of solving the existence problem the construction problem the random sampling problem and the counting problem In particular the difficulty of evaluating Polya's cycle polynomial is demonstrated **Efficient Algorithms for Listing Combinatorial Structures** Leslie Ann Goldberg, 2009-07-30 This thesis is concerned with the design of efficient algorithms for listing combinatorial structures The research described here gives some answers to the following questions which families of combinatorial structures have fast computer algorithms for listing their members What general methods are useful for listing combinatorial structures. The Algorithm Design Manual: Text Steven S. Skiena,1998 This volume helps take some of the mystery out of identifying and dealing with key algorithms Drawing heavily on the author s own real world experiences the book stresses design and analysis Coverage is divided into two parts the first being a general guide to techniques for the design and analysis of computer algorithms The second is a reference section which includes a catalog of the 75 most important algorithmic problems By browsing this catalog readers can quickly identify what the problem they have encountered is called what is known about it and how they should proceed if they need to solve it This book is ideal for the working professional who uses algorithms on a daily basis and has need for a handy reference This work can also readily be used in an upper division course or as a student reference guide THE ALGORITHM DESIGN MANUAL comes with a CD ROM that contains a complete hypertext version of the full printed book the source code and URLs for all cited implementations over 30 hours of audio lectures on the design and analysis of algorithms are provided all keyed to on line lecture notes

Sowa, 1994-07-27 This book is the proceedings of the Second International Conference on Conceptual Structures ICCS 94 held at College Park Maryland USA in August 1994 This proceedings presents on an international scale up to the minute research results on theoretical and applicational aspects of conceptual graphs particularly on the use of contexts in knowledge representation The concept of contexts is highly important for all kinds of knowledge intensive systems The book is organized into sections on natural language understanding rational problem solving conceptual graph theory contexts and canons and data modeling

Graph-Theoretic Concepts in Computer Science Juraj Hromkovič, Manfred Nagl, Bernhard Westfechtel, 2005-01-25 During its 30 year existence the International Workshop on Graph Theoretic Concepts in Computer Science has become a distinguished and high quality computer science event The workshop aims at uniting theory and practice by demonstrating how graph theoretic concepts can successfully be applied to v ious areas of computer science and by exposing new theories emerging from applications In this way WG provides a common ground for the exchange of information among people dealing with several graph problems and working in various disciplines Thereby the workshop contributes to forming an interdis plinary research community The original idea of the Workshop on Graph Theoretic Concepts in C puter Science was ingenuity in all theoretical aspects and applications of graph concepts wherever applied Within the last ten years the development has strengthened in particular the topic of structural graph properties in relation to computational complexity This workshop has become pivotal for the c munity interested in these areas An aimspeci c to the 30thWG was to support the central role of WG in both of the prementioned areas on the one hand and on the other hand to promote its originally broader scope The 30th WG was held at the Physikzentrum Bad Honnef which serves as the main meeting point of the German

The papers provide a wealth of new results for various classes of graphs graph computations graph algorithms and graph theoretical applications in various fields The workshop aims at uniting theory and practice by demonstrating how graph theoretic concepts can be applied to various areas in Computer Science or by extracting new problems from applications The goal is to present recent research results and to identify and explore directions of future research Mathematics in Berlin Heinrich Begehr, Helmut Koch, Jürg Kramer, Norbert Schappacher, Ernst-Jochen Thiele, 1998-07-21 This little book is conceived as a service to mathematicians attending the 1998 International Congress of Mathematicians in Berlin It presents a

comprehensive condensed overview of mathematical activity in Berlin from Leibniz almost to the present day without however including biographies of living mathematicians Since many towering figures in mathematical history worked in Berlin most of the chapters of this book are concise biographies. These are held together by a few survey articles presenting the overall development of entire periods of scientific life at Berlin Overlaps between various chapters and differences in style between the chap ters were inevitable but sometimes this provided opportunities to show different aspects of a single historical event for instance the Kronecker Weierstrass con troversy The book aims at readability rather than scholarly completeness There are no footnotes only references to the individual bibliographies of each chapter Still we do hope that the texts brought together here and written by the various authors for this volume constitute a solid introduction to the history of Berlin mathematics Principles of Data Mining and Knowledge Discovery Luc de Raedt, Arno Siebes, 2003-06-30 This book constitutes the refereed proceedings of the 5th European Conference on Principles of Data Mining and Knowledge Discovery PKDD 2001 held in Freiburg Germany in September 2001 The 40 revised full papers presented together with four invited contributions were carefully reviewed and selected from close to 100 submissions Among the topics addressed are hidden Markov models text summarization supervised learning unsupervised learning demographic data analysis phenotype data mining spatio temporal clustering Web usage analysis association rules clustering algorithms time series analysis rule discovery text categorization self organizing maps filtering reinforcement learning support vector machines visual data mining and machine learning
