SIM, J. S., and S. NAKAI, ed. *Egg Uses and Processing Technologies: New Developments*. 1994. CAB International, Wallingford, Oxon, UK.

This 420-page text presents a summary of the Non-Conventional Egg Uses and Newly Emerging Processing Technologies Symposium held April, 1992 in Banff, Canada. Part I, which includes the first six chapters, is dedicated to worldwide trends in egg products technology. This section offers a unique opportunity to develop an appreciation of the cultural diversity of egg utilization. The chapter providing information on Japanese nontraditional egg use is particularly interesting, as it discusses very recent developments for eggs in the medical and pharmaceutical fields. Pharmaceutical applications include egg components as an HPLC ligand for separation of chiral compounds. Part II addresses egg chemicals and separation technologies. Several of these chapters are specific "how tos" concerning lysozyme and avidin separation and preparation, separation of immunoglobulin from egg, and supercritical fluid extraction. The chapters also offer insight into the impact of these technologies on other areas of food production, such as the isolation of phosvitin from egg yolk for use as an antioxidant for nonegg products. Part III explores nonfood egg uses, with several chapters dealing specifically with egg yolk TgY isolation and application. Two novel applications discussed include use of egg yolk TgY in the development of an ELISA for Ochratoxin A and use for resistance against *Edwardsiella tarda* in Japanese eel. Part IV reviews functional modifications of egg products. Timely topics include the effects of gamma irradiation on the physicochemical properties of eggs and egg products. One chapter provides a comprehensive summary of the influence of irradiation on the functional characteristics of shell, liquid-frozen, and spray-dried eggs. Another chapter discusses the use of

egg white in rheological studies for elucidating protein interactions in the formation of gels. Part V presents chapters dealing with the nutritional modification of egg products, specifically the enhancement of yolk n-3 fatty acids. Due to the recent upsurge in research interest in this area some of this material is dated, although it does provide useful background information for more recent developments.

Egg Uses and Processing Technologies provides a condensed summary of several emerging technologies in the area of egg utilization. Overall the text is well written, although some chapters are surprisingly short given the amount of work the respective author has completed in a particular area. This book seems best suited as a supplementary text to a graduate poultry products class, although several chapters may require additional diagrams to aid in student comprehension.

EL BOUSHY, A.R.Y., and A.F.B. VAN DER POEL, *Poultry Feed From Waste—Processing and Use*. 1994. Chapman and Hall, London, United Kingdom. 438 pp.

The education systems of the world encourage improved nutrition for the well being and productivity of humankind. This combined with a steady population growth and changing lifestyles has produced increased production in livestock and plant products. This has resulted in a marked increase in by-product production, which must be properly utilized to maximize food production and to prevent environmental pollution.

The book deals with many of the by-products associated with humans and agriculture. They include dried poultry waste, poultry processing plant sludge, poultry processing by-products, hide and tanning waste, fruit, vegetable and brew-
