**Motion and Knowledge in the Changing Early Modern World**

Ofer Gal, Yi Zheng, 2013-11-08 This volume comprises studies of the early modern drama of motion and transformation of knowledge. It is unique in taking its global nature as fundamental and contains studies of the theme of motion and knowledge in China, Europe and the Pacific from the 16th to the 18th century. People living around the turn of the 17th century were experiencing motion in ways beyond the grasp of anyone less than a century earlier. Goods and people were crossing lands and oceans to distances never envisioned and in scales hardly imaginable by their recent predecessors. The earth itself has been set in motion and the heavens were populated by a whole new array of moving objects: comets, moons, sun spots. Even the motion of terrestrial objects so close at hand and seemingly obvious was being thoroughly reshaped. In the two centuries to follow, this incessant world-changing motion would transform the creation, interpretation and dissemination of knowledge and the life and experiences of the people producing it: savants, artisans, pilots, collectors.

Viktor, 2023-05-01 Innovation and creativity in organizations are pivotal to survival as human activity fuses with technological domains. **Education from a Whiteheadian Point of View** Vesselin Petrov, 2019-03-28

The basic aims of contemporary thinking in education are to cultivate a proper comprehension of the meaning and purpose of education and the role of the teacher and to develop adequate theoretical and methodological frameworks that combine some of the positive sides of the leading theories while avoiding their disadvantages. Toward these ends, one excellent candidate for consideration is Alfred North Whitehead's 1861-1947 process-relational philosophy of education as set forth in *The Aims of Education* (1929) and elsewhere. The contributors to this volume analyze Whitehead's philosophy of education in a detailed and critical fashion, including inquiring into the development of cycle-based approaches to education like Whitehead's in intellectual history as well as its potential objective bases. They also demonstrate how this relates to and can be integrated with other leading

theories of education and contemporary pedagogical thinking and identify avenues for its positive practical application in schooling across the globe as well as in scientific research The book further critically evaluates current educational practices and the organization of educational institutions in this light and the effectiveness of teaching strategies that are founded upon some of its principles while also exploring the ramifications of its selection and application in education for society in general as well as for our common civilizational aspirations including humanity's addressing of global problems such as the ecological crisis In addition the volume also serves to lay some of the groundwork for its potential further development
