Advancing the New Jazz Studies by focusing on questions of intermediality and cultural catalysis this book demonstrates the role jazz played in the re making of West German culture in the post war era The shadow of National Socialism a history of German polarisation by jazz and the influences of occupation and division meant that jazz catalysed influential young creative artists These included writers such as Nobel Laureate G nter Grass Young German Cinema filmmakers like Hansj rgen Pohland and abstract visual artists like KRH Sonderborg Jazz provided an impulse to take into extra musical artforms and an impetus to reflect on what art and culture were Through considering poetry the novel photography film and television graphic design and the fine arts this volume reveals how German creatives were influenced not only by American jazz culture but also by cultural innovations from elsewhere and by German traditions they considered less compromised by the Nazi era The book also explores the limits of this catalysis examining for example how African Americans received the German representation of jazz culture Written in an accessible style this important contribution to New Jazz Studies and German Studies scholarship will appeal to both graduate and undergraduate students or researchers in the fields of jazz history twentieth century musicology and European or German cultural studies      **The Art and Politics of Asger Jorn** Ms Karen Kurczynski,2014-08-28 Situating the Danish artist Asger Jorn s work in an international post World War II context Karen Kurczynski offers an account of the essential phases of this prolific artist s career and addresses his works in various media alongside his extensive writings and collaborations The study reframes our understanding of the 1950s and foregrounds the idea that the sensory address of art and its complex relationship to popular media can have a direct social and political impact      [Lonely Planet The Netherlands](#) Nicola Williams,2022-07 Lonely Planet s The Netherlands is your passport to the most relevant up to date advice on what to see and skip and what hidden discoveries await you Marvel at Rotterdam s architecture sample Dutch cheese and explore Amsterdam s Canal Ring all with your trusted travel companion Get to the heart of the Netherlands and begin your journey now Inside Lonely Planet s The Netherlands Travel Guide Up to date information all businesses were rechecked before publication to ensure they are still open after 2020 s COVID 19 outbreak NEW top experiences feature a visually inspiring collection of the Netherlands best experiences and where to have them What s NEW feature taps into cultural trends and helps you find fresh ideas and cool new areas NEW pull out passport size Just Landed card with wi fi ATM and transport info all you need for a smooth journey from airport to hotel Planning tools for family travellers where to go how to save money plus fun stuff just for kids Colour maps and images throughout Highlights and itineraries help you tailor your trip to your personal needs and interests Insider tips to save time and money and get around like a local avoiding crowds and trouble spots Essential info at your fingertips hours of operation websites transit tips

**Light and Matter Id / Licht und Materie Id** H. Bilz, D. Strauch, R.K. Wehner, 2012-12-06 The dynamical properties of solids have recently attracted renewed interest in connection with the increasing understanding of phase transitions and related phenomena In particular soft modes or more generally phonon anomalies seem to play an important role in structural and electronic phase transitions such as ferroelectric or superconducting transitions The understanding of the mechanisms responsible for the occurrence of unusually low frequencies in phonon spectra requires a detailed analysis of the microscopic forces governing the lattice vibrations Of particular importance is the influence of the electron lattice interaction in the adiabatic approximation which in many cases is the origin of peculiarities in the phonon self energy In this work the vibrational spectra of pure non metals and of those containing point defects are investigated In these materials the interrelation between the pseudo harmonic forces determining the phonon dispersion relations and the non linear anharmonic and electron phonon forces as they act in infrared and Raman spectra is most obvious and can be quantitatively analysed in terms of appropriate models The main task is to arrive at a physically correct treatment of electronic degrees of freedom as for example in an electronic shell model which leads to the description of phonon spectra in terms of long range polarizabilities and short range deformabilities The purpose of our review is to stimulate further investigations which we hope will result in explicit relations between the parameters of the semi microscopic models and the matrix elements from the electronic band structure
