concepts and terminology explained Is a useful companion to the Association for the Study of Medical Education's ASME book *Understanding Medical Education* Covers a wide range of topics and themes Is a perfect guide for teaching and learning in both the classroom and clinical setting *Medical Education* Della Fish, Colin Coles, 2005-11-16 This book is written by two eminent educators and clinicians in medicine and provides a wealth of information and food for thought for those who have responsibility for curriculum development *Journal of Orthodontics* What are the contemporary problems facing curriculum designers and developers What are the key questions that ought to be addressed with regard to curriculum design for medical practice How might a curriculum for practice in medical education be developed *Medical Education* offers a detailed response to these questions and shows what form a curriculum for practice should take and how one can be developed These ideas are presented in a highly practical and readable account that is essential reading for those involved in educating the doctors of the future and for policy makers in the field of medical education It also offers useful advice for those in related fields of health care The authors show that recent developments of curricula for postgraduate doctors have been founded on the misguided view promoted by politicians and policy makers that medical practice is routine straightforward and able to be reduced to simple protocols that professionals must learn and follow In this view doctors are technicians who need merely to be trained through a simple curriculum In contrast this book shows that the practice of medicine as experienced by working doctors is complex uncertain and unpredictable This requires a curriculum that provides the opportunity to learn to exercise professional judgement and make decisions based on practical wisdom Teachers and Teaching in U.S. Medical Schools Hilliard Jason, Jane Westberg, 1982 **Educating Physicians** Molly Cooke, David M. Medical Education for the Future Alan Bleakley, John Bligh, Julie Browne, 2011-02-21 The purpose of medical education is to benefit patients by improving the work of doctors Patient centeredness is a centuries old concept in medicine but there is still a long way to go before medical education can truly be said to be patient centered Ensuring the centrality of the patient is a particular challenge during medical education when students are still forming an identity as trainee doctors and conservative attitudes towards medicine and education are common amongst medical teachers making it hard to bring about improvements How can teachers policy makers researchers and doctors bring about lasting change that will restore the patient to the heart of medical education The authors experienced medical educators explore the role of the patient in medical education in terms of identity power and location Using innovative political philosophical cultural and literary critical frameworks that have previously never been applied so consistently to the field the authors provide a fundamental reconceptualisation of medical teaching and learning with an emphasis upon learning at the bedside and in the clinic They offer a wealth of practical and conceptual insights into the three way relationship between patients students and teachers setting out a radical and exciting approach to a medical education for the future The authors provide us with a masterful reconceptualization of medical education that challenges traditional notions about teaching and learning The book critiques current practices and offers new approaches to medical education based upon sociocultural research and theory This thought provoking narrative advances the case for reform and is a must read for anyone involved in medical education David M Irby PhD Vice Dean for Education University of California San Francisco School of Medicine and co author of Educating Physicians A Call for Reform of Medical School and Residency This book is a truly visionary contribution to the Flexner centenary It is compulsory reading for the medical educationalist with a serious concern for the future and for the welfare of patients and learners in the here and now Professor Tim Dornan University of Manchester Medical School and Maastricht University Graduate School of Health Professions Education

The Importance of Becoming a Medical Educator Anthony Berman, 2020-03-30 It is often assumed that healthcare professionals are effective medical educators simply because they have completed the required courses leading to their degrees As such they are rarely provided with the ongoing support needed to become consistently effective medical teachers Developing effective medical teachers is a complex task that can best be achieved by providing teacher candidates with the understanding and tools they need to become effective Although a thorough knowledge of medicine is necessary to become an excellent medical educator earning a medical degree alone is not enough A variety of factors go into a teacher's effectiveness in any educational setting and most teachers need guidance and practice in order to become effective Among the many topics addressed in this text are teaching learning instructional objectives teacher assessment adult learning theory motivation of adult learners the red flags of ineffective teaching and the difference between equality and equity This book will serve to educate doctors on how to better teach their students and current colleagues and most importantly how to better educate their patients **A**

Education Jochanan Benbassat, 2024-12-06 This concise and challenging examination of medical education aims to discuss curriculum design and evaluation in medical schools and to take a fresh look at current trends in patient care and continuing education teaching methods The ideas and insights provided here are based on the author's long career in clinical practice and teaching medical students and residents Medical education is no exception to the changes at every level in medicine For example the ready access to medical information via the Internet and other media has produced smarter and informed patients Multi specialty hospital practice has replaced the individual doctor patient relationship perhaps compromising patient care to some extent New subjects have been added over the years to medical curricula Nevertheless there has often been a reluctance to remove older topics possibly limiting the medical training course's ability to develop as expected The transition from theories of higher education to the reality of curriculum planning and design is a huge leap An important question is how to translate the mission of higher education in general which has been variably described as a training of reflective individuals who possess both culture and expertise and can master any subject with facility into a coherent teaching program The mission of medical education includes the promotion of professionalism in learners by including courses in medical ethics that have become integral to medical education in the USA However despite the development of standards and competencies related to professionalism there is no consensus on the specific goals of medical ethics education the knowledge and skills expected of learners and the best pedagogical methods and processes for their implementation and assessment A significant contribution to the clinical teaching literature Curriculum Design Evaluation and Teaching in Medical Education should be of interest to a variety of readers including clinical educators administrators health care professionals and especially residency directors
