Marine Simulation and Ship Manoeuvrability M.S. Chislett, 2021-10-01 Real time interactive ship simulators limped onto the scene in the wake of flight simulators some years ago The maritime industries have a long history of conservatism but this is now changing rapidly The information age has also swept over ships and shipping and has been taken to heart to such an extent that for example flight simulators now cooperate with ship simulators and import useful new concepts and methodologies The more than 50 papers contained in this book show what and why Although traditionally conservative the marine world is also traditionally international and this has not changed The papers in the book are by leading authors from all over the world and provide a detailed snap shot of the rapidly advancing state of the art together with pointers to the future The overall theme of MARSIM 96 and therefore also of this book is Vessel manoeuvrability and marine simulation research training and assessment and includes original papers on topics such as bridge resource management distant learning and simulators coupled via The Internet virtual reality neural networks rudder propeller hydrodynamics prime mover models squat in shallow water and many more

Global Perspectives of Nanoscience and Engineering Education Kurt Winkelmann, Bharat Bhushan, 2016-06-28 This book presents the perspectives of nanotechnology educators from around the world Experts present the pressing challenges of teaching nanoscience and engineering to students in all levels of education postsecondary and informal environments The book was inspired by the 2014 NSF workshop for Nanoscience and Engineering Education Since nanotechnology is a relatively new field authors present recommendations for designing nanotechnology education programs The chapters describe methods to teach specific topics such as probe microscopy size and scale and nanomaterial safety in classrooms around the world Other chapters describe the ways that organizations like NNIN and the NISE Network have influenced informal nanotechnology education Information technology plays a growing role in all types of education and

several chapters are devoted to describing ways how educators can use online curricula for teaching nanotechnology to students from preschool to graduate school *Simulators in Anesthesiology Education* Lindsey C. Henson, Andrew C. Lee, 2013-06-29 In the past ten years full scale simulation training has become dramatically more evident in undergraduate and graduate medical education This increase has been due primarily to two factors the development of new computer driven technology and an interest in simulation specific training techniques Technologically simulators have evolved from simple anatomical reproductions to full scale accurate reproductions of anatomy and physiology powered by multiple computers High technology simulation centers run by teams of faculty are emerging as integral tools in fulfilling medical centers educational missions In addition educational techniques specific to simulation which have been developed and used by other industries for over half a century are being applied to medical training Aviation and aerospace have used sophisticated simulation since the 1950s to train pilots and astronauts Extrapolating these methods for use in the medical world has been a natural course of events particularly in specialties that require some of the same basic thought processes and interactions required of the pilot or astronaut It is not surprising then that anesthesiology would be the medical specialty to take the lead in adding simulation training to its educational programs The anesthesiologist's job in the operating room is similar to that of a pilot in a cockpit not in the specific tasks but in decision making technological and human interfaces and crisis management
