People offers new perspectives on the challenges posed today by climate change and peak oil demonstrating that although the path of modern economic development has vastly increased our energy use it has not been a story of ever rising and continuous consumption The book sheds light on the often lengthy and complex changes needed for new energy systems to emerge the role of energy resources in economic growth and the importance of energy efficiency in promoting growth and reducing future energy demand

*The Technology Trap* Carl Benedikt Frey,2020-09-22 From the Industrial Revolution to the age of artificial intelligence Carl Benedikt Frey offers a sweeping account of the history of technological progress and how it has radically shifted the distribution of economic and political power among society s members As the author shows the Industrial Revolution created unprecedented wealth and prosperity over the long run but the immediate consequences of mechanization were devastating for large swaths of the population These trends broadly mirror those in our current age of automation But just as the Industrial Revolution eventually brought about extraordinary benefits for society artificial intelligence systems have the potential to do the same Benedikt Frey demonstrates that in the midst of another technological revolution the lessons of the past can help us to more effectively face the present From publisher description

*From Oikonomia to Political Economy* Germano Maifreda,2016-04-22 Renaissance Europe witnessed a surge of interest in new scientific ideas and theories Whilst the study of this Scientific Revolution has dramatically shifted our appreciation of many facets of the early modern world remarkably little attention has been paid to its influence upon one key area that of economics Through an interrogation of the relationship between economic and scientific developments in early modern Western Europe this book demonstrates how a new economic epistemology appeared that was to have profound consequences both at the time and for subsequent generations Dr Maifreda argues that the new attention shown by astronomers physicians aristocrats men of letters travellers and merchants for the functioning of economic life and markets laid the ground for a radically new discourse that envisioned economics as an independent field of scientific knowledge By researching the historical context surrounding this new field of knowledge he identifies three key factors that contributed to the cultural construction of economics Firstly Italian Humanism and Renaissance which promoted new subjects methods and quantitative analysis Secondly European overseas expansion which revealed the existence of economic cultures previously unknown to Europeans Thirdly factor identified is the fifteenth and sixteenth century crisis of traditional epistemologies which increasingly valued empirical scientific knowledge over long held beliefs Based on a wide range of published and archival sources the book illuminates new economic sensibilities within a range of established and more novel scientific disciplines including astronomy physics ethnography geology and chemistry alchemy By tracing these developments within the wider social and cultural fields of everyday commercial life the study offers a fascinating insight into the relationship between economic knowledge and science during the early modern period
