**A New Measure of Competition in the Financial Industry** Jacob Bikker,Michiel van Leuvensteijn,2014-08-27 The 2008 credit crisis started with the failure of one large bank Lehman Brothers Since then the focus of both politicians and regulators has been on stabilising the economy and preventing future financial instability At this juncture we are at the last stage of future proofing the financial sector by raising capital requirements and tightening financial regulation Now the policy agenda needs to concentrate on transforming the banking sector into an engine for

growth Reviving competition in the banking sector after the state interventions of the past years is a key step in this process This book introduces and explains a relatively new concept in competition measurement the performance conduct structure PCS indicator The key idea behind this measure is that a firm's efficiency is more highly rewarded in terms of market share and profit the stronger competitive pressure is The book begins by explaining the financial market's fundamental obstacles to competition presenting a brief survey of the complex relationship between financial stability and competition The theoretical contributions of Hay and Liu and Boone provide the theoretical underpinning for the PCS indicator while its application to banking and insurance illustrates its empirical qualities Finally this book presents a systematic comparison between the results of this approach and all existing methods as applied to 46 countries over the same sample period This book presents a comprehensive overview of the knowns and unknowns of financial sector competition for commercial and central bankers policy makers supervisors and academics alike *International Economics and Confusing Politics* David
