*Evolutionary Ecology of Marine Invertebrate Larvae* Tyler J. Carrier, Adam M. Reitzel, Andreas Heyland, 2018 Marine invertebrate larvae are an integral part of pelagic diversity and have stimulated the curiosity of researchers for centuries This book integrates the latest research in order to provide a modern synthesis of this interdisciplinary field *Ecology of Marine Invertebrate Larvae* Larry McEdward, 2020-04-08 This is the first book to provide a detailed treatment of the field of larval ecology The 13 chapters use state of the art reviews and critiques of nearly all of the major topics in this diverse and rapidly growing field Topics include patterns of larval diversity reproductive energetics spawning ecology life history theory larval feeding and nutrition larval mortality behavior and locomotion larval transport dispersal population genetics recruitment dynamics and larval evolution Written by the leading new scientists in the field chapters define the current state of larval ecology and outline the important questions for future research *Ecology of Marine Invertebrate Larvae* Larry R. McEdward, 1995 This is the first book to provide a detailed treatment of the field of larval ecology The 13 chapters use state of the art reviews and critiques of nearly all of the major topics in this diverse and rapidly growing field Topics include patterns of larval diversity reproductive energetics spawning ecology life history theory larval feeding and nutrition larval mortality behavior and locomotion larval transport dispersal population genetics recruitment dynamics and larval evolution Written by the leading new scientists in the field chapters define the current state of larval ecology and outline the important questions for future research **Field Inferences in the Ecology of Marine Invertebrate Larvae**, 1990 **Atlas of Marine Invertebrate Larvae** Michael J. Boyle, Craig M. Young, Mary A. Sewell, 2025-04-16 Atlas of Marine Invertebrate Larvae Second Edition covers the origins and history of marine larval science contemporary state of the art approaches to larval development and biology and the highest quality images and schematics showing the broadest diversity of marine larvae in the animal tree of life This book illustrates larval body plans the anatomy of their organ systems muscular sensory digestive including distinct ciliation patterns that facilitate swimming and the complex metamorphic changes they undergo between different larval and growth stages Each chapter contains in text references that direct readers to both historical and contemporary research on the forms functions behaviors and biogeographical distributions of marine larvae This book is a valuable and foundational resource for biologists across various disciplines including biodiversity biogeography and developmental biology Ecologists taxonomists oceanographers and environmental scientists also benefit from the complete coverage of marine larval forms offered by this book Additionally the broad scope and phyletic coverage of marine biodiversity presented in this atlas is ideal for students in oceanography and marine biology animal development biological oceanography and invertebrate zoology Covers every major marine invertebrate clade within the Metazoa Includes an expanded introductory chapter on the biology ecology and roles of larvae in marine food webs and the movements of marine invertebrate species within the world's oceans Provides complete updates to each chapter including condensed comparative

background information on taxon specific development and life history patterns Features detailed anatomical schematics and drawings accompanied by compound confocal and scanning electron micrographs for multiple recognized clades within each phylum

Field Interferences in the Ecology of Marine Invertebrate Larvae Kirsten Muus,1990      **The Response of Marine Invertebrate Larvae to Physical and Biological Characteristics of the Water Column** Jessica A. Sameoto,2007

Aggregations of meroplankton at physical and biological discontinuities have been observed in the field however the role of larval behaviour in generating these patterns remains elusive This thesis examined the effects of salinity food patches larval density and flow on the vertical distribution of meroplanktonic larvae For bipinnaria of the sea star *Asterias rubens* 4 and 6 arm sea urchin larvae of *Strongylocentrotus droebachiensis* and veligers of the mussel *Mytilus edulis* the presence of a halocline had a pronounced effect on larval vertical distribution In the absence of a halocline larvae swam upwards and for echinoderm larvae most larvae aggregated near the surface of the water column When the salinity of the top water layer was reduced larvae aggregated at and below the halocline The aggregation response of larvae increased with the strength of the vertical salinity gradient and was not caused by larval buoyancy Rather salinity induced mortality likely influenced the behavioural changes seen in the halocline study as a strong relationship was observed between the proportion of larvae in the top water layer in the halocline treatments and the probability of larvae surviving in the salinity of that layer The shape of this relationship varied between *A. rubens* and *S. droebachiensis* indicating that the functional response of larvae to salinity is most likely species specific The presence of a food patch acted to further inhibit larval dispersal through the halocline by strengthening the aggregation response at the halocline Changes in the vertical distribution of 4 arm stage echinoplutei of *S. droebachiensis* were also examined at three flow velocities 0.048 and 1.02 cm s<sup>-1</sup> in an annular flume Under flow conditions the number of larvae observed in the mid to low water column increased with increased flow velocity These results suggest that flow negatively influences the ability of larvae to aggregate near the surface of the water column but that even weak swimming larvae such as *S. droebachiensis* are able to actively influence their vertical distribution in flows that exceed their swimming speed This study adds to our knowledge of the behavioural interaction of larvae with their environment and suggests that on small scales cm s to m s behaviour may play an important role in determining larval distribution To my knowledge this is the first study to explicitly relate larval behaviour with salinity induced stress and the first to test the effect of flow on larval vertical distribution in the water column

**Evolution of Sexual Reproduction in Marine Invertebrates** Andrew (Andrey N.) Ostrovsky, 2013-12-16 Three major aspects that distinguish this book are that 1 it contains the most detailed analysis of the sexual reproduction oogenesis fertilization and embryonic incubation in a particular phylum of the aquatic invertebrates Bryozoa ever made this analysis is based on an exhaustive review of the literature on that topic published over the last 260 years as well as extensive original histological anatomical and morphological data obtained during studies of both extant and extinct species 2 this broad analysis has made it possible to reconstruct the major patterns stages and trends in the evolution of sexual reproduction in various bryozoan clades showing numerous examples of parallelisms during transitions from broadcasting to embryonic incubation from planktotrophic to non feeding larvae and from lecithotrophy to placentation corresponding shifts in oogenesis fertilization and embryonic development are discussed in detail and 3 the key evolutionary novelties acquired by Bryozoa are compared with similar

innovations that have evolved in other groups of marine invertebrates showing the general trends in the evolution of their sexual reproduction Ecological background of these innovations is considered too Altogether these aspects make the monograph an Encyclopedia of bryozoan sexual reproduction offering an integral picture of the evolution of this complex phenomenon

**Biofouling** Simone Dürr, Jeremy C. Thomason, 2009-12-21 Biofouling the colonisation of an interface by a diverse array of organisms is almost always a problem where it occurs as it negatively affects surfaces the materials that they are made from and the structures that they form and can even destroy them This comprehensive book covers in detail in its first section the processes involved in marine freshwater and medical biofouling including coverage of settlement by larvae and spores biofouling community processes epibiosis biofouling on living organisms and microbial fouling including biofilms deleterious to human health The book s second section encompassing biofouling processes with industrial implications includes coverage of biofouling on artificial substrata paints and coatings technology for the control of marine biofouling biofouling and antifouling in the maritime industries such as shipping offshore oil and aquaculture and in power stations and other industries The impacts of both biofouling and biofouling control and details of current legislation of relevance to biofouling issues are fully covered The book

s final section looks at methods for the measurement of biofouling and future prospects for biofouling including in depth coverage of the changes anticipated in biofouling worldwide due to global climate change and likely future directions in antifouling research technology and legislation Biofouling which includes contributions from many international experts is an essential reference for all those working in the antifouling industry including those involved in formulation of antifouling products such as paints and other coatings Aquatic biologists ecologists environmental scientists and lawyers marine engineers aquaculture personnel chemists and medical researchers will all find much of interest within this book All universities and research establishments where these subjects are studied and taught should have copies of this important work on their shelves
