The Other Canon of Economics, Volume 2 Erik Reinert, 2024-02-13 Other Canon

Economics Essays in the Theory and History of Uneven Economic Development brings together key essays on development economics from one of the most prolific and important development economists and historians of economic policy today Erik S Reinert argues through essays ranging from 1994 to 2020 that neo classical economics damages developing countries the theory of comparative advantage leaves out a number of factors which make economic activities qualitatively different as carriers of economic growth Based on a long intellectual tradition started by the Italian economists Giovanni Botero 1589 and Antonio Serra 1613 and later used in virtually all presently industrialised countries Reinert shows that the country which exports increasing returns goods e g high end manufacture has advantages over the country which exports diminishing returns goods e g commodities This has important implications for today s development strategies that Reinert argues should be seen as industrial strategies

**Liberalism against Liberalism** Javier Aranzadi, 2006-04-18 The defence of the market and economic freedom have been the main objectives of the investigations by liberal thinkers such as Milton Friedman Gary Becker F Hayek and L Von Mises Bearing in mind that the first two economists are the maximum exponents of the Chicago School and the last two of the Austrian School it is often concluded that the theories of both schools are similar This book demonstrates that in reality there is no convergence or complementariness to be found between both schools of thought The anthropological categories contributed by Mises allow us to understand all human phenomena from the view of the man who acts In this view economics is part of a philosophical system whose core is the creative capacity of people Becker s work on the other hand is concentrated on the generalization of the homo economicus as the basis for explaining all human behaviour He generalizes the maximizing principle to explain all human reality and extends the scope of the application of a so called scientific and technical view of the world In this key volume an important read for those in the fields of economic theory and political economy Javier Aranzadi argues in essence that the tradition of Hayek and Mises encourages a humanistic liberalism whereas the Chicago School proposes only a technical humanism

They include recent game theoretic analyses of rent seeking contests and also applications of the rent seeking concepts and methodology to economic regulation international trade policy economic history political competition and other social phenomena The new collection is more than twice as large as any previous collection and both updates and extends the earlier surveys Volume I contains previously published research on the theory of rent seeking contests which is an important strand of contemporary game theory Volume II contains previously published research that uses the theory of rent seeking to analyze a broad range of public policy and social science topics The editors spent more than a year assembling possible papers and although the selections fill two large volumes many more papers could have been included
