**Effect of Laser Radiation on Absorbing Condensed Matter** V. B. Fedorov,1990      The Physics of Laser Radiation-Matter Interaction Alexander Horn,2022-11-20 This textbook explains the fundamental processes involved in the interaction of electromagnetic radiation with matter It leads students from a general discussion of electrodynamics forming the mathematical foundation for the Maxwell equations to key results such as the Fresnel equations Snell s law and the Brewster angle deriving along the way the equations for accelerated charges and discussing dipole radiation Bremsstrahlung and synchrotron radiation By considering more and more interacting particles the book advances its treatment of the subject approaching the solid state regime using both classical and quantum mechanical approaches to describe interaction paths with electromagnetic radiation Finally specific interactions of laser radiation with matter are explained such as ultrafast coherent and selective interaction With an emphasis on achieving an intuitive grasp of the basic physics underlying common laser technology this textbook is ideal for graduate students seeking both a better fundamental and applied understanding of laser matter interaction      Nuclear Science Abstracts ,1976      **Directed Energy Weapons** Bahman Zohuri,2016-08-29 This book delves deeply into the real world technologies behind the directed energy weapons that many believe exist only within the confines of science fiction On the contrary directed energy weapons such as high energy lasers are very real and this book provides a crash course in all the physical and mathematical concepts that make these weapons a reality Written to serve both scientists researching the physical phenomena of laser effects as well as engineers focusing on practical applications the author provides worked examples demonstrating issues such as how to solve for heat diffusion equation for different boundary and initial conditions Several sections are devoted to reviewing and dealing with solutions of diffusion equations utilizing the aid of the integral transform techniques Ultimately this book examines the state of the art in currently available high energy laser technologies and suggests future directions for accelerating practical applications in the field br div      **High Energy Laser (Hel)** Bahman Zohuri,2014-11-22 Directed Energy Weapons is nothing new to mankind historically the origination of such weapons falls in centuries ago when first time the famous Greek mathematician physicist engineer inventor and astronomer Archimedes of Syracuse used different mirrors to collect sunbeams and focusing them on Romans fleet in order to destroy enemy ships with fire This is known as the Archimedes Heat Ray Archimedes may have used mirrors acting collectively as a parabolic reflector to burn ships attacking Syracuse The device was used to focus sunlight onto approaching ships causing them to catch fire Of course the myth or reality of Archimedes Heat Ray still is a questionable story but certain experiments with the help of a group of students from Massachusetts Institute of Technology was carried out with 127 one foot 30 cm square mirror tiles in October of 2005 that was focused on a mock up wooden ship at a range of around 100 feet 30 m The flames broke out on a patch of the ship but only after the sky had been cloudless and the ship had remained stationary for around ten minutes It was concluded the device was a feasible weapon under these
