Research in Psychiatry L.K. George Hsu,Michel Hersen,2013-11-11 This multiauthored textbook is directed to the psychiatric resident and other professionals who are interested in the issues strategies and methods of psychiatric research Although the field of psychiatry has not attained the scientific rigor and clinical sophistication of some of its sister disciplines in the medical arena considerable progress has been made in the last decade or two and a full understanding of the types of articles that now appear in such publications as the American Journal of Psychiatry the Archives of General Psychiatry and the Journal of the American Academy of Child and Adolescent Psychiatry requires a fair amount of knowledge about research design and strategy Whereas articles in psychiatric journals 20 years ago dealt mainly with psycho dynamic topics and utilized nonexperimental observations today their counter parts are concerned

mostly with psychobiology clinical features diagnosis and treatment and employ scientific experimental designs The trend of applying scientific methodology to research in psychiatry is increasing and undoubtedly will continue to do so in the future

The Race Against Time Robert A. Nemiroff, Calvin A. Colarusso, 2013-11-21 This is the second book in the pioneering investigation of adult development by Robert A. Nemiroff and Calvin A. Colarusso. The first, *Adult Development: A New Dimension in Psychodynamic Theory and Practice*, arrived to critical acclaim in 1981. It presented a psychodynamic theory of development during the second half of life and a model of normal adult functioning. This book is the logical sequel, expanding and elaborating the original formulations and applying them to the clinical practice of psychotherapy and psychoanalysis. Nemiroff and Colarusso demonstrate that these are appropriate techniques for patients in the second half of life regardless of age. They lay to rest many stereotypes and myths that have long interfered with the dynamic treatment of older patients and they propose exciting new conceptualizations such as that of adult developmental arrests. The genetic approach reaches beyond childhood and adolescence and takes on important new meaning by incorporating an adult developmental past that influences both psychopathology and transference. The relationship between theory and therapy is richly demonstrated in the clinical presentations including ten detailed case histories of patients between the ages of 40 and 80. These and other clinical discussions provide ample evidence that a psychodynamic approach that is based on a sound adult developmental psychology can be extraordinarily effective. They also demonstrate both the similarities and differences in working with older versus younger patients. This work is a major contribution in a long neglected dimension of clinical psychiatry. Innovative Approaches for Difficult-to-treat Populations Scott W. Henggeler, 1997 *Innovative Approaches for Difficult to Treat Populations* makes recommendations for developing and disseminating innovative mental health services. It is geared toward clinicians, administrators, and policy makers struggling to develop both clinically effective and cost-effective mental health and substance abuse services and it focuses on services for individuals who use the highest proportion of mental health resources and for whom traditional services have not been effective. These target populations include youth with serious behavioral and emotional disturbances and adults with severe and persistent mental illnesses. The innovative approaches reviewed include diverse treatment methods for differing clinical populations. These varied approaches have several common elements: social ecological theory frameworks; an emphasis on delivering flexible, comprehensive, pragmatic and goal-oriented interventions in persons' natural environments; increased accountability on the part of service providers. The transition from centralized to community-based care is discussed and normalizing a patient's daily routine as an important factor in the success of state-of-the-art community support programs is emphasized. *Innovative Approaches for Difficult to Treat Populations* offers mental health professionals and students a firsthand look at the future direction of clinical services. Policy issues necessary to developing and disseminating progressive treatments are addressed, including the downsizing of state psychiatric hospitals, strategies for reforming state mental hospital systems, and ethical issues in research.

on child and adolescent mental disorders *Psychopathology and Violent Crime* Andrew E. Skodol, 1998 Psychopathology and Violent Crime goes to the heart of this controversial and complex subject Dr Skodol presents the results of extensive epidemiologic samples and studies of criminal populations on the correlation between crime and mental disorder

Clinical Disorders of Memory Aman U. Khan, 2012-12-06 Memory is essential for the retention of learning In the presence of memory deficits new learning is impaired and performance of previously learned habits deteriorates What is the nature of memory Where does it reside in the brain What biological events are associated with the formation and retrieval of memory These questions are explored in the first chapter of this volume The answers are not final but we have learned a great deal about memory processes during the past few decades Memory is influenced by most of the pathological processes that influence the brain such as infection trauma cerebrovascular disorders and metabolic and degenerative diseases The nature and course of memory impairment are unique for each of the disorders and are fairly distinguishable More than fifty conditions are known to cause dementia which now affects several million Americans In Alzheimer's disease memory disorder predominates for two to three years before other intellectual functions are affected Many neurological diseases such as Huntington's disease Friedreich's ataxia and multiple sclerosis are associated with progressive memory deficits Forgetting is a problem that becomes progressively worse with age Most individuals in their forties begin to experience some difficulty in quick recall of past events By age sixty definite changes are evident in the process of registration storage and recall of memory At this age the material that is to be remembered is processed more slowly stored less firmly and poorly recalled

Mood Disorders Peter C. Whybrow, Hagop S. Akiskal, William T. McKinney Jr., 2012-12-06 In this book we present a conceptually integrated approach to disorders of mood These disorders are defined narrowly as the clinical syndromes of mania and melancholia The latter is our particular focus for the simple reason that it is more common and thus more is known about it Our approach owes much to Adolf Meyer who first used the term psychobiology It was he who emphasized in a practical way the importance of the clinician considering the joint contribution of psychosocial and biological factors in the genesis of mental disorders However until the 1960s our relative ignorance of basic mechanisms that link brain and behavior prevented the development of a genuine psychobiological perspective Thus Meyer's work was concerned largely with teaching the importance of the personal biography and a consideration of social history in the development of mental disorder We feel that sufficiently rigorous data have now emerged in psychiatry to permit tentative but real psychobiological integration Affective illness is probably the most promising area for an attempt at such a synthesis It is our belief that the theory and clinical practice of psychiatry now can be woven into a coherent theme integrating insights and evidence generated by the psychodynamic biological and behavioral methods hence in part we review the emerging psychobiology of mood disorders with the hope that it can serve as a generic paradigm for other psychiatric syndromes **The Veteran's Guide to Psychiatry** Deborah Y. Liggan MD, 2015-12-19 The Veterans Administration continues to play a central role in

providing mental health services but everyone in the field can do a better job helping those who've served our country Deborah Y Liggan MD who has succeeded in both civilian and Air Force military service explores the spectrum of mental health illnesses that affect veterans and how each disorder impacts their lives and the lives of their loved ones Topics focus specifically on veterans and include psychiatric interviewing mood disorders anxiety disorders psychotic disorders disorders of cognition recovery from mental illness and psychiatric emergencies With clear and concise language the guide explores how to respond to complaints such as depression suicide and psychotic thought processes At the conclusion of each chapter are ten study questions of self examination for review The Veterans Guide to Psychiatry is the definitive guide for psychiatrist residents psychologists psychiatric social workers and anyone involved in diagnosing and treating emotional illnesses

Evaluation of the Psychiatric Patient Seymour L. Halleck, 2013-11-09 A few months before the final manuscript of this book was sent to the publisher Dr Karl A Menninger died shortly before his ninety seventh birthday Thus when I sat down to write this preface he was very much on my mind I remembered that it had been almost forty years since he wrote A Manual for Psychiatric Case Study not one of his well known but probably the most practical of his books The psycho analytically trained part of me began to wonder what had motivated me to write a book on a topic so similar to that which had earlier drawn the attention of my revered teacher There is no pressing need for another book on psychiatric evaluation furthermore evaluation is a very difficult subject to write about in a straightforward way Whatever my unconscious motivations may have been I hope they were less significant than those of which I was aware I wrote this book mainly as part of an effort to reverse certain trends in psychiatric education In the last decade psychiatrists have increasingly been trained in an environment that emphasizes brief evaluation of patients and de-emphasizes teaching about the complexity of human behavior and experience Trainees no longer study psychiatric evaluation in a systematic manner They take fewer intensive histories fill out forms instead of describing the patient's mental status and with rare exceptions are not taught how to conceptualize biological and psychosocial interactions
