Emerging Computer Techniques In Stormwater And Flood Management:

Emerging Computer Techniques in Stormwater and Flood Management William James, 1984 Proceedings of a conference held at Niagara on the Lake Ontario Canada October 29 November 4 1983 This collection contains 29 papers that identify and assemble information on recent applications of mini and microcomputer technology to problems in urban stormwater and flood management Instrumentation and data management are reviewed with respect to watershed management and flood forecasting Computer applications of hydrologic modeling are reported Hydraulics and water quality models using microcomputers and programmable calculators are presented and applied to urban flooding and runoff and river plume models Real time control is reviewed in application to urban runoff forecasting flood forecasting and reservoir operation Implications for the future are discussed covering software expert systems and interactive processing

New Techniques for Modelling the Management of Stormwater Quality Impacts William James, 1992-12-21 New Techniques for Modelling the Management of Stormwater Quality Impacts is a unique volume devoted to discussing new developments in modeling best management practices BMPs information management user interfacing and instrumentation for reducing the impacts of urbanization on aquatic ecosystems The book is divided into three sections ecosystems and environmental modeling contexts best management practices including real time control and applications of geographical information systems GIS Specific topics addressed include the need to move from a regulatory basis for system management to a process based management system the use of remote sensing to divide a catchment into six different hydrologic response classes to compute floods instrumentation data acquisition real time control aspects of stormwater detention ponds and methods for using GIS Detailed indexes lists of acronyms programs and models and a full glossary are provided at the end of the book New Techniques for Modelling the Management of Stormwater Quality Impacts will interest professional engineers in municipal and environmental engineering consultants researchers in civil engineering hydrological engineers hydraulics engineers environmental policy makers and students

Hydroinformatics Tools for Planning, Design, Operation and Rehabilitation of Sewer Systems J. Marsalek, Cedo Maksimovic, Evzen Zeman, Roland Price, 2013-04-17 Hydroinformatics systems are systems that combine computational hydraulic modelling with information systems including knowledge based systems They are gaining rapid acceptance in the areas of environmental planning design and management The present book focuses exclusively on sewage systems starting with their planning and then going on to discuss their design operation and rehabilitation The very experienced authors discuss business and information needs in the management of urban drainage tools for collecting and archiving such data and their use in modelling catchment hydrology sewer systems hydraulics wastewater quality wastewater treatment plant operation and receiving waters The control and operation of sewer systems in real time is described followed by a discussion of their maintenance and rehabilitation Intelligent decision support systems for managing the urban drainage business process are presented Audience Researchers into sewer design municipal

Ford,Darryl W. Davis,1983 **HEC Software Development and Support** Bill Eichert,1983 **Disaster Risk Reduction for Resilience** Saeid Eslamian,Faezeh Eslamian,2023-11-15 This book is part of a six volume series on Disaster Risk Reduction and Resilience The series aims to fill in gaps in theory and practice in the Sendai Framework and provides additional resources methodologies and communication strategies to enhance the plan for action and targets proposed by the Sendai Framework The series will appeal to a broad range of researchers academics students policy makers and practitioners in engineering environmental science and geography geoscience emergency management finance community adaptation atmospheric science and information technology This volume discusses the implementation of socio hydrological resilience measures to curb the impacts on vulnerable communities of hydrologic diasters such as coastal floods drought water scarcity and thunderstorms The book provides a framework for sustainable hydrology community interactions to inform local communities about the best practices to achieve hydrological resilience and to implement resilient water infrastructure Hydrological influences on the resilience of a region are comprehensively surveyed and a green economy strategy is described and recommended for achieving climatic and hydrological sustainability *Decision Support Systems* Daniel P. Mambretti,C. A. Brebbia,2014-05-27 Urban Water II is the proceedings of the 2nd International Conference on the Design Construction Maintenance Monitoring and Control of Urban Water Systems The meeting was reconvened following the success of the first conference held in the New Forest home to the Wessex Institute of Technology in 2012 Water systems in the urban environment consist of supply networks as well as sewage and storm drainage systems They interact with each other and with warm bodies such as rivers lakes and aquifers and this interaction affects the quality and quantity of the different systems As our cities continue to expand their urban infrastructure must be re evaluated and adapted to new requirements related to the increase in population and the growing areas under urbanisation New water systems are also required to reduce the risk associated with floods network failures and many others related to inadequate networks New systems should reduce economic losses and environmental impacts as well as promote a higher degree of reliability Improved management measurement and control mechanisms are needed to ensure the efficiency and safety of urban water systems Topics such as contamination and pollution discharges in urban water bodies as well as the monitoring of water recycling systems are currently receiving a great deal of attention from researchers and professional engineers working in the water industry Architects and town planners are also aware of the importance of the interaction between urban water cycles and city planning and landscaping Management of all these aspects requires the development of specialised computer tools that can respond to the increased

complexity of urban water systems Relating to the subject areas of Water supply networks and Urban Drainage topics covered include Leakage and losses Modelling and experimentation Safety and security of water systems Maintenance and repairs Water quality Water savings and reuse Surface water and groundwater sources Reservoirs Network design Waste water treatment and disposal Structural works and infrastructure Water quality issues Combined sewer networks Flood control Storage tanks Environmental impact Domestic and industrial waste water issues *ASCE Combined Index* American Society of Civil Engineers,1984 Indexes materials appearing in the Society's Journals Transactions Manuals and reports Special publications and Civil engineering **Watershed Models** Vijay P. Torno,Jiri Marsalek,Michel Desbordes,2013-06-29 In most of the developed countries of the World significant efforts to control the pollution of surface waters have been underway for decades and particularly the last 10 15 years These efforts have focused mainly on eliminating or mitigating the effects of point sources of pollution In many cases however it is clear that we have achieved only limited improvement in water quality and that non point sources of pollution are going to control any further improvement It has long been known that urban runoff is a major non point source and much research has been done in an attempt to understand the mechanisms and processes which govern this source and to reduce or eliminate its impacts Many urban jurisdictions have adopted urban runoff pollution control measures in spite of the fact that there is a great deal that we still do not know and without really being able to quantify the benefits achieved A major problem is that while a great deal of work is being done both in Europe and North America it is very difficult to keep abreast of new developments The Urban Water Resources Research Council of the American Society of Civil Engineers has for many years had as one of its major objectives the transfer of urban runoff technology among researchers and practitioners in the field as well as to those engineers who are not in the forefront but who nonetheless need the information on the latest developments *Ei Engineering Conference Index* ,1985 Systems Analysis in Water Quality Management M.
