Wollheim,1971 **How to Live Forever** Stephen R L Clark,2008-01-28 Immortality is a subject which has long been explored and imagined by science fiction writers In his intriguing new study Stephen R L Clark argues that the genre of science fiction writing allows investigation of philosophical questions about immortality without the constraints of academic philosophy He reveals how fantasy accounts of issues such as resurrection disembodied survival reincarnation and devices or drugs for preserving life can be used as an important resource for philosophical inquiry and examines how a society of immortals might function through a reading of the vampire myth How to Live Forever is a compelling study which introduces students and professional philosophers to the possibilities of using science fiction in their work It includes extensive suggestions for further reading both fictional and philosophical and examines the work of such major science fiction authors as Arthur C Clarke Frank Herbert Larry Niven William Gibson and Colin Wilson Nature & Science on the Pacific Coast ,1915 **Twins and Recursion in Digital, Literary and Visual Cultures** Edward King,2022-04-07 The tale of twins being reunited after a long separation is a trope that has been endlessly repeated and reworked across different cultures and throughout history with each moment adapting the twin plot to address its current cultural tensions In this study Edward King demonstrates how twins are a means of exploring the social implications of hyper connectivity and the compromising relationship between humans and digital information their environment and their genetics As King demonstrates twins tell us about the changing forms of connectivity and power in contemporary culture and what new conceptions of the human they present us with Taking account of a broad range of literary cultural and scientific practices Entwined Being probes discussions surrounding twins such as The way in

which they appear in behavioral genetics as a way of identifying inherited predispositions to social media How their faces interrupt biometric interfaces such as facial recognition software and undermine advances in neo liberal surveillance systems How they represent the uncanny and the weird in the horror genre and how this questions ideologies of communications media and the connectivity it enables Their association with telepathy and cybernetics in science fiction Their construction as models for entangled being in ecological thought Drawing upon the literary and filmic works of Ken Follet Edgar Allan Poe H P Lovecraft Bruce Chatwin Shelley Jackson Brian de Palma Peter Greenway and David Cronenberg as well as science fiction literature and the television series Orphan Black King illuminates how twins are employed across a range of disciplines to envision a critical re conception of the human in times of digital integration and ecological crisis [The Way to Ground Zero](#) Martha A. Bartter, 1988-10-24 Bartter surveys 250 American science fiction stories and American SF novels with occasional overlaps of stories made into episodic novels that have some relationship often direct sometimes marginal to atomic weapons and their effects Highly recommended for popular literature collections Choice Divided into three principal parts The Way to Ground Zero begins by exploring The Way to Hiroshima Through a detailed analysis of the works included Bartter reveals the sociopolitical assumptions that authors took for granted and develops a method by which these assumptions can be disclosed She shows that encoded in these fictions we can find the patterns that led us to create and use the atomic bomb In the second section Bartter looks at the deeper assumptions on which these sociopolitical assumptions rest focusing particularly on those which perpetuate considerations of nuclear war both in science fiction and in actual policy making Finally Bartter explores alternative assumptions proposed by innovative science fiction writers Throughout an attempt is made to forge a deeper understanding of the ways in which science fiction both reflects and influences human and international relations Students of science fiction and of literature and politics will find Bartter's work enlightening provocative reading Bartter argues that a close examination of American fiction particularly science fiction can offer important new insights into the events surrounding the bombing of Hiroshima in 1945 The use of an atomic bomb to end the war followed a scenario long established in science fiction defeating our enemy with a super weapon developed by native technological genius By examining the interrelationship between this persistent plot device and the development and use of a real super weapon Bartter sheds new light on the transactional role of literature and real life Her analysis is based on a comprehensive theory of human nature substantiated by exhaustive research in science fiction archives and libraries and covers a large number of stories both well known and relatively obscure featuring super weapons or super war and published by American authors
