Channell, 2017-06-14 Are science and technology independent of one another Is technology dependent upon science and if so how is it dependent Is science dependent upon technology and if so how is it dependent Or are science and technology becoming so interdependent that the line dividing them has become totally erased This book charts the history of technoscience from the late nineteenth century to the end of the twentieth century and shows how the military industrial academic complex and big science combined to create new examples of technoscience in such areas as the nuclear arms race the space race the digital age and the new worlds of nanotechnology and biotechnology      Prologue, 2000      *Technology's Storytellers* John M. Staudenmaier, 1989-09-06 Technology s Storytellers documents the emergence of the history of technology as a coherent intellectual discipline Based on an analysis of nearly 300 articles published in *Technology and Culture* it proposes a mode of historical research as a communal rather than an individualistic endeavor looking for patterns of consensus in the authors choice of time periods geographical locations and types of technology to study It discusses the recurrent themes of the relationship between science and technology and the cultural ambience of technology and examines the extent to which historians are moving away from a once pervasive ideology of autonomous technological progress Co published with the Society for the History of Technology      **Innovation as a Social Process** W. Bernard Carlson, 2003-02-13 Elihu Thomson was a late nineteenth century American inventor who helped create the first electric lighting and power systems One of the most prolific inventors in American history Thomson was granted nearly 700 patents in a career spanning the 1880s to 1930s      Patents, Inventions and the Dynamics of Innovation Roger Cullis, 2007-01-01 This unique study investigates the path of innovation in the electrical electronics and communications engineering industries It presents a holistic multi disciplinary analysis of innovation based on case studies of paradigm changing inventions spanning two hundred years which altered the course of the global economy The stimuli and constraints which control the dynamics of these innovations are pin pointed in this book and applied to emerging technologies Roger Cullis tests the analysis using a recent technology which underpins the embryonic information based economy He demonstrates that it is possible to use the hierarchical and time dependent nature of the stimuli and constraints he has identified to predict the likely success of a new technological invention Considering the impact of all factors which contribute to the success of innovations this unique book will be of great interest to inventors patent attorneys and intellectual property practitioners and academics It will also interest licensing executives and venture capitalists innovation economists and government policymakers Book jacket      **Agricultural Enlightenment** Peter Jones, 2016 *Agricultural Enlightenment*

explores the modernization of the rural economy in Europe through the lens of the Enlightenment It focuses on the second half of the eighteenth century and emphasizes the role of useful knowledge in the process of agrarian change and agricultural development As such it invites economic historians to respond to the challenge issued by Joel Mokyr to look beyond quantitative data and to take seriously the argument that cultural factors broadly understood may have aided or hindered the evolution of agriculture in the early modern period what people knew and believed had a direct bearing on their economic behavior Mokyr *The Enlightened Economy* Evidence in support of the idea that a readily accessible supply of agricultural knowledge helps to explain the trajectory of the rural economy is drawn from all of the countries of Europe The book includes two cases studies of rapid rural modernization in Scotland and Denmark where Agricultural Enlightenment was swiftly followed by full scale Agricultural Revolution *Proceedings, American Philosophical Society (vol. 147, no. 3, 2003)* , **An American Manufactory** Laura N. march on Lexington and Concord is a legendary contribution to the American Revolution This book reveals another side of this American hero's life that of a transformational entrepreneur instrumental in the industrial revolution It combines a biographical examination of Revere with a study of the new nation's business and technological climate A silversmith prior to the Revolution and heralded for his patriotism during the war Revere aspired to higher social status within the fledgling United States To that end he shifted away from artisan silversmithing toward larger more involved manufacturing ventures such as ironworking bronze casting and copper sheet rolling The author explores Revere's vibrant career successes and failures social networks business practices and the groundbreaking metallurgical technologies he developed and employed Revere's commercial ventures epitomized what Martello terms proto industrialization a transitional state between craft work and mass manufacture that characterizes the broader fast changing landscape of the American economy

**The Tool Engineer**, 1942 *Material Culture* Kenneth L. Ames, 1985 *The Challenge of Emulation in Art and Architecture* David Mayernik, 2016-04-01 Emulation is a challenging middle ground between imitation and invention The idea of rivaling by means of imitation as old as the Aeneid and as modern as Michelangelo fit neither the pessimistic deference of the neoclassicists nor the revolutionary spirit of the Romantics Emulation thus disappeared along with the Renaissance humanist tradition but it is slowly being recovered in the scholarship of Roman art It remains to recover emulation for the Renaissance itself and to revivify it for modern practice Mayernik argues that it was the absence of a coherent understanding of emulation that fostered the fissuring of artistic production in the later eighteenth century into those devoted to copying the past and those interested in continual novelty a situation solidified over the course of the nineteenth century and mostly taken for granted today This book is a unique contribution to our understanding of the historical phenomenon of emulation and perhaps more importantly a timely argument for its value to contemporary practice

**Mechanics' Magazine, and Register of Inventions and Improvements** John Knight, 1834 **Thomas Edison: Success and Innovation through Failure** Ian Wills, 2020-01-01 This book develops a systematic approach to the role of failure in innovation using the laboratory notebooks of America's most successful inventor Thomas Edison It argues that Edison's active pursuit of failure and innovative uses of failure as a tool were crucial to his success From this the author argues that not only should we expect innovations to fail but that there are good reasons to want them to fail Using Edison's laboratory notebooks written as he worked and before he knew the outcome we see the many false starts wrong directions and failures that he worked through on his way to producing revolutionary inventions While Edison's strengths in exploiting failure made him the icon of American inventors they could also be liabilities when he moved from one field to another Not only is this book of value to readers with an interest in the history of technology and American invention its insights are important to those who seek to innovate and to those who employ and finance them
