The neurobiology of emotion-cognition interactions Hadas Okon-Singer, Luiz Pessoa, Alexander J. Shackman, 2015-06-12 There is increasing interest in understanding the interplay of emotional and cognitive processes The objective of the Research Topic was to provide an interdisciplinary survey of cutting edge neuroscientific research on the interaction and integration of emotion and cognition in the brain The following original empirical reports commentaries and theoretical reviews provide a comprehensive survey on recent advances in understanding how emotional and cognitive processes interact how they are integrated in the brain and what their implications for understanding the mind and its disorders are These works encompasses a broad spectrum of populations and showcases a wide variety of paradigms measures analytic strategies and conceptual approaches The aim of the Topic was to begin to address several key questions about the interplay of cognitive and emotional processes in the brain including what is the impact of emotional states anxiety and stress on various cognitive functions How are emotion and cognition integrated in the brain Do individual differences in affective dimensions of temperament and personality alter cognitive performance and how is this realized in the brain Are there individual differences that increase vulnerability to the impact of affect on cognition who is vulnerable and who resilient How plastic is the interplay of cognition and emotion Taken together these works demonstrate that emotion and cognition are deeply interwoven in the fabric of the brain suggesting that widely held beliefs about the key constituents of the emotional brain and the cognitive brain are fundamentally flawed Developing a deeper understanding of the emotional cognitive brain is important not just for understanding the mind but also for elucidating the root causes of its many debilitating disorders

Atlas of Emotion Giuliana Bruno, 2020-05-05 Atlas of Emotion is a highly original endeavour to map a cultural history of spatio visual arts In an evocative montage of words and pictures emphasises that sight and site but also motion and emotion are irrevocably connected In so doing Giuliana Bruno touches on the art of Gerhard Richter and Annette Message the film making of Peter Greenaway and Michelangelo Antonioni the origins of the movie palace and its precursors

and her own journeys to her native Naples Visually luscious and daring in conception Bruno opens new vistas and understandings at every turn *The Janus-Face of Language: Where Are the Emotions in Words and the Words in Emotions?* Cornelia Herbert, Thomas Ethofer, Andreas J. Fallgatter, Peter Walla, Georg Northoff, 2018-09-28 Language has long been considered independent from emotions In the last few years however research has accumulated empirical evidence against this theoretical belief of a purely cognitive based foundation of language In particular through research on emotional word processing it has been shown that processing of emotional words activates emotional brain structures elicits emotional facial expressions and modulates action tendencies of approach and avoidance probably in a similar manner as processing of non verbal emotional stimuli does In addition it has been shown that emotional content is already processed in the visual cortex in a facilitated manner which suggests that processing of emotional language content is able to circumvent in depth semantic analysis Yet this is only one side of the coin Very recent research putting words into context suggests that language may also construe emotions and that by studying word processing one can provide a window to one's own feelings All in all the empirical observations support the thesis of a close relationship between language and emotions at the level of word meaning as a specific evolutionary achievement of the human species As such this relationship seems to be different from the one between emotions and speech where emotional meaning is conveyed by nonverbal features of the voice But what does this relationship between written words and emotions theoretically imply for the processing of emotional information The present Research Topic and its related articles aim to provide answers to this question This book comprises several experimental studies investigating the brain structures and the time course of emotional word processing Included are studies examining the affective core dimensions underlying affective word processing and studies that show how these basic affective dimensions influence word processing in general as well as the interaction between words feelings and expressive behavior In addition new impetus comes from studies that on the one hand investigate how task sublexical and intrapersonal factors influence emotional word processing and on the other hand extend emotional word processing to the domains of social context and self related processing Finally future perspectives are outlined including research on emotion and language acquisition culture and multilingualism In summary this textbook offers scientists from different disciplines insight into the neurophysiological behavioral and subjective mechanisms underlying emotion and language interactions It gives new impulses to existing theories on the embodiment of language and emotion and provides new ways of looking at emotion cognition interactions *Emotion in the Human Face* Paul Ekman, Wallace V. Friesen, Phoebe Ellsworth, 2013-10-22 Emotion in the Human Face Guidelines for Research and an Integration of Findings reviews research findings about the link between the face and emotion and provides some guidelines for study of this complicated but intriguing phenomenon Some of the conceptual ambiguities that have hindered research and the methodological decisions that must be made in planning research on the face and emotion are discussed How past investigators handled these matters is presented critically and a

set of standards is offered This book is comprised of 21 chapters and begins with an overview of questions about how the face provides information about emotion with emphasis on evidence based on scientific research largely in psychology The reader is then introduced to conceptual ambiguities and methodological decisions related to research on the face emotion connection including sampling along with some important research findings In particular emotion categories and dimensions that observers can judge on the basis of facial behavior are analyzed and whether such judgments can be accurate The similarities and differences in facial behavior across cultures are also considered along with the relative contribution of facial behavior and contextual information to the judgment of emotion This monograph is intended primarily for students of psychology anthropology ethology sociology and biology as well as those planning or already conducting research on the face

Neural processing of emotion in multimodal settings Martin Klasen, Benjamin Kreifelts, Yu-Han Chen, Janina Seubert, Klaus Mathiak, 2015-05-06 Our everyday life is characterized by a multitude of emotionally relevant cues that we perceive and communicate via various sensory channels This does not only encompass the obvious cases of auditory and visual modalities but also olfactory gustatory and even tactile stimuli Any kind of emotional situation in a natural setting is usually a multimodal experience A friend welcomes us with warm words a smile and a happy voice the sight of our favourite food is accompanied by a seductive smell and a delicious taste the thrill of watching an exciting movie scene is intensified by a gripping soundtrack In these

situations the signals from various senses do not stand on their own they interact and create a unified emotional experience Recent neuroscientific research has begun to accommodate this inherent multimodality of emotions in natural situations by studying the interaction of affectively relevant information from more than one sensory channel Fascinating new aspects emerge concerning the neurobiology of emotion processing and there is evidence that integrating emotional cues from various sources invokes brain processes that go beyond the well known patterns observed during unimodal stimulation The aim of this volume is to present novel and interesting studies dealing with the multimodality of emotions and their neural processing This includes findings from novel paradigms beyond the classical stimulus response pattern fascinating new insights into the interaction of the chemical senses new analysis methods comprehensive reviews of selected topics multimodality in social interactions and clinical perspectives Taken together the studies of this volume thus help us to better understand the interplay of various senses in our daily emotional experiences
