Promoting Silicon Valleys in Latin America Luciano Ciravegna, 2012 The spectacular economic performance of China East Asia and India during the last ten years has ignited some profound changes in the world economy The share of global demand investments trade and production of the traditional industrialized powers the US Europe and Japan has gradually yet continuously declined This rise of China also has implications for Latin America On the one hand booming Chinese demand for raw materials and food has sustained the economic performance of Latin America during the last decade On the other hand the competitiveness of China and as a hub for advanced manufacturing is threatening Latin America s attempt to diversify its economy from its dependence on the export of natural resource based goods Most Latin American countries are not however waiting passively for their economies to become ever more reliant on high prices for food minerals and oil Leveraging the economic and political stability that they achieved during the last decades many countries in the region such as Brazil Chile Colombia Costa

Rica and Uruguay are attempting to capture the growing market for knowledge intensive products and services by breeding their own Silicon Valleys This book discusses the promotion of ICT clusters in Latin America by analyzing the development of the Costa Rican cluster in particular an often celebrated case of successful policy in the region Costa Rica a small country traditionally known for its coffee and wildlife managed to build an information technology cluster within ten years becoming the leading producer of ICT per capita in Latin America Studying the Costa Rican case provides a solid starting point for understanding the challenges of building ICT clusters in Latin America Political Economy of the Environment Simon Dietz,Jonathan Michie,Christine Oughton,2011-02-01 This book is the culmination of several years work by a group of academics policy makers and other professionals looking to understand how alternative economic thinking and indeed thinking from quite different social scientific disciplines could enhance the mainstream economic approach to environmental and natural resource problems Of the editors Dietz comes from the mainstream economics tradition while Michie and Oughton draw explicitly on institutional and evolutionary economics The various authors represent a range of disciplinary backgrounds and approaches This book draws on the strengths of each and all of these approaches to analyse environmental issues and what can be done to tackle these through corporate and public policy The book argues that the need for an inter disciplinary approach Two themes which emerge repeatedly throughout the book are the need for an interdisciplinary theory of technological change and the need for a similarly interdisciplinary approach to the study of human behaviour and how it influences both production and consumption choices The two themes are of course related Resolving environmental questions requires an understanding of their nature of their causes and to the extent that they are anthropogenic of how to change human behaviour These fundamental issues are the focus of the four chapters that form Part 1 of this volume The remainder of the volume develops them in more detail **Collected Writings of R.P. Dore** R.P. Dore,2014-05-01 This volume of the Collected Writings of Modern Western Scholars on Japan published under the Japan Library imprint brings together landmark writings by R P Dore on Japanese society politics and economics *Towards a Sustainable European Company Law* Beate Sjøfjell,2009-01-01 No one doubts any longer that sustainable development is a normative imperative Yet there is unmistakably a great reluctance to acknowledge any legal basis upon which companies are obliged to forgo shareholder value when such a policy clearly dilutes responsibility for company action in the face of continuing environmental degradation Here is a book that boldly says Shareholder primacy is wrong Such a narrow short term focus the author shows works against the achievement of the overarching societal goals of European law itself The core role of EU company and securities law is to promote economic development notably through the facilitation of market integration while its contributory role is to further sustainable development through facilitation of the integration of economic and social development and environmental protection There is a clear legal basis in European law to overturn the poorly substantiated theory of a market for corporate control as a theoretical and ideological basis when enacting company law With rigorous and

persuasive research and analysis this book demonstrates that European companies should have legal obligations beyond the maximization of profit for shareholders human and environmental interests may and should be engaged with in the realm of company law and company law has a crucial role in furthering sustainable development As a test case the author offers an in depth analysis of the Takeover Directive showing that it neither promotes economic development nor furthers the integration of the economic social and environmental interests that the principle of sustainable development requires This book goes to the very core of the ongoing debate on the function and future of European company law Surprisingly it does not make an argument in favour of changing EU law but shows that we can take a great leap forward from where we are For this powerful insight and the innumerable recognitions that support it this book is a timely and exciting new resource for lawyers and academics in both camps those on the activist side of the issue and those with company or official policymaking responsibilities

The Interaction Between Competition Law and Corporate Governance Florence Thépot, 2019-02-14 Florence Th pot provides the first systematic account of the interaction between competition law and corporate governance She challenges the black box conception of the firm or undertaking in competition law as applied to increasingly complex corporate relations The book opens the black box of the firm to understand the internal drivers of collusive behaviour and proposes a unified approach to cartel enforcement based on the agency theory It explores key issues including corporate compliance programmes the attribution of liability in corporate groups and structural links between competitors and should be read by anyone interested in how the evolution of the corporate landscape impacts competition law

Differential Rates, Residual Information Sets and Transactional Algebras Rodolfo Apreda, 2006 Both current theory and practice in financial markets are undergoing a strong pressure to include recently developed fields of inquiry namely market microstructure transaction costs and asymmetric information This claim has been taking shape after nearly thirty years of worthy research and empirical development that laid sound groundwork to those promising subjects The purpose of this book is to introduce a new approach to work out the returns from financial assets Firstly by means of the concept of differential rates which allow the breaking down of the ordinary rate of return into components that are rates on their own Secondly residual information sets are built up to match each differential rate with its underlying information

Radical Product Innovation in Network Economies Philipp Leutiger, 2002-07-24 Inhaltsangabe Abstract The focus of this thesis is set on radical product introductions in network markets It appears that these have to overcome significant impediments to reach

critical mass in the form of network externalities A literature overview of economic analysis in this field including network types value of networks path dependencies and lock ins as well as a detailed critique of these frameworks is provided We then discuss several possible avenues to overcome these challenges some of which relate to the optimal boundaries of the firm as well as some which attempt to tackle market externalities From these a market based framework will be developed as a guideline for radical product introductions into network economies We analyse business cases in light of this framework in a selection of historic examples In addition as we find that contradictory arguments abound in chapter three a second approach is proposed tentatively as basis for further research Besides it s theoretic approach this thesis also provides real world examples from different geographic areas such as the U S Europe and Japan A special emphasis will be put on the market of payment solutions now emerging in Europe and in particular on the German start up Paybox net AG
