 Hall, 2003-12-31 Whether responding to a CNN.com survey or voting for the NFL All Pro team computer users are becoming  
 more and more comfortable with Internet polls Computer use in the United States continues to grow more than half of all  
 American households now have a personal computer The next question then becomes obvious Should Americans be able to  
 use the Internet in the most important polls of all Some advocates of Internet voting argue that Americans are well suited to  
 casting their ballots online in political elections They are eager to make use of new technology and they have relatively broad  
 access to the Internet Voting would become easier for people stuck at home at the office or on the road Internet voting might  
 encourage greater political participation among young adults a group that stays away from the polling place in droves It  
 would hold special appeal for military personnel overseas whose ability to vote is a growing concern There are serious  
 concerns however regarding computer security and voter fraud unequal Internet access across socioeconomic lines the  
 digital divide and the civic consequences of moving elections away from schools and other polling places and into private  
 homes and offices After all showing up to vote is the most public civic activity many Americans engage in and it is often their  
 only overt participation in the democratic process In Point Click and Vote voting experts Michael Alvarez and Thad Hall make  
 a strong case for greater experimentation with Internet voting In their words There is no way to know whether any argument  
 regarding Internet voting is accurate unless real Internet voting systems are tested and they should be tested in small scale  
 scientific trials so that their successes and failures can be evaluated In other words you never know until you try and it's time  
 to try harder The authors offer a realistic plan for putting pilot remote Internet voting programs into effect     *Internet Tax
