The European Union and National Macroeconomic Policy James Forder, Anand Menon, 1998 The European Union and National Macroeconomic Policy examines the way in which the European Union has affected autonomy in the macro economic policy making of the member states

Development Macroeconomics Pierre-Richard Agénor, Peter J. Montiel, 2015-06-23 The global financial crisis triggered severe shocks for developing countries whose embrace of greater commercial and financial openness has increased their exposure to external shocks both real and financial This new edition of Development Macroeconomics has been fully revised to address the more open and less stable environment in which developing countries operate today Describing the latest advances in this rapidly changing field the book features expanded coverage of public debt and the management of capital inflows as well as new material on fiscal discipline monetary policy regimes currency banking and sovereign debt crises currency unions and the choice of an exchange rate regime A new chapter on dynamic stochastic general equilibrium DSGE models with financial frictions has been added to reflect how the financial crisis has reshaped our thinking on the role of such frictions in generating and propagating real and financial shocks The book also discusses the role of macroprudential regulation both independently and through its interactions with monetary policy in preserving financial and macroeconomic stability Now in its fourth edition Development Macroeconomics remains the definitive textbook on the macroeconomics of developing countries The most authoritative book on the subject now fully revised and expanded Features new material on fiscal discipline monetary policy regimes currency banking and sovereign debt crises and much more Comes with online supplements on informal financial markets stabilization programs the solution of DSGE models with financial frictions and exchange rate crises *IMF Staff papers, Volume 43 No. 1*

International Monetary Fund. Research Dept., 1996-01-01 This paper extends a standard growth model and obtains consistent panel data estimates of the growth retarding effects of military spending via its adverse impact on capital formation and resource allocation Simulation experiments suggest that a substantial long term peace dividend in the form of higher capacity output may result from markedly lower military expenditure levels achieved in most regions during the late 1980s and the further military spending cuts that would be possible if global peace could be secured Global Finance and the Macroeconomy A. Makin, 2016-01-08 This book provides new ways of analyzing the key issues in international finance and open economy macroeconomics The topics covered include financial globalization and the evolution of the international financial system international macroeconomic accounting and measurement early balance of payments approaches the intertemporal model of international borrowing and lending the significance of external deficits the determinants of interest rate differentials and exchange rates the effectiveness of monetary and fiscal policies capital mobility and economic growth and the causes of financial crisis in emerging economies *IMF Staff papers* International Monetary Fund. Research Dept., 1995-01-01 This paper provides a critical survey of the literature on politico institutional determinants of the

government budget We organize our discussion around two questions Why did certain OECD countries but not others accumulate large public debts Why did these fiscal imbalances appear in the last twenty years rather than sooner We begin by discussing the tax smoothing model and conclude that this approach alone cannot provide complete answers to these questions We then proceed to a discussion of political economy models which we organize into six groups 1 models based upon opportunistic policy makers and naive voters with fiscal illusion 2 models of intergenerational redistributions 3 models of debt as a strategic variable linking the current government with the next one 4 models of coalition governments 5 models of geographically dispersed interests and 6 models emphasizing the effects of budgetary institutions We conclude by briefly discussing policy implications

Economic and Political Institutions in Economic Policy Vitantonio Muscatelli, 1996 Bringing together leading names from different economic disciplines the volume includes chapters on elections and the economy distributional policies and constitutional design and government and the market

Foundations of International

Macroeconomics Maurice Obstfeld, Kenneth Rogoff, 1996-09-12 Foundations of International Macroeconomics is an innovative text that offers the first integrative modern treatment of the core issues in open economy macroeconomics and finance With its clear and accessible style it is suitable for first year graduate macroeconomics courses as well as graduate courses in international macroeconomics and finance Each chapter incorporates an extensive and eclectic array of empirical evidence For the beginning student these examples provide motivation and aid in understanding the practical value of the economic models developed For advanced researchers they highlight key insights and conundrums in the field Topic coverage includes intertemporal consumption and investment theory government spending and budget deficits finance theory and asset pricing the implications of and problems inherent in international capital market integration growth inflation and seignorage policy credibility real and nominal exchange rate determination and many interesting special topics such as speculative attacks target exchange rate zones and parallels between immigration and capital mobility Most main results are derived both for the small country and world economy cases The first seven chapters cover models of the real economy while the final three chapters incorporate the economy's monetary side including an innovative approach to bridging the usual chasm between real and monetary models

Interests, Institutions, and Information Helen V.

Milner, 2020-06-30 Increasingly scholars of international relations are rallying around the idea that domestic politics matters Few however have articulated precisely how or why it matters In this significant book Helen Milner lays out the first fully developed theory of domestic politics showing exactly how domestic politics affects international outcomes In developing this rational choice theory Milner argues that any explanation that treats states as unitary actors is ultimately misleading She describes all states as polyarchic where decision making power is shared between two or more actors such as a legislature and an executive Milner constructs a new model based on two level game theory reflecting the political activity at both the domestic and international levels She illustrates this model by taking up the critical question of cooperation among nations

Milner examines the central factors that influence the strategic game of domestic politics. She shows that it is the outcome of this internal game, not fears of other countries' relative gains or the likelihood of cheating that ultimately shapes how the international game is played out and therefore the extent of cooperative endeavors. The interaction of the domestic actors' preferences, given their political institutions and levels of information, defines when international cooperation is possible and what its terms will be. Several test cases examine how this argument explains the phases of a cooperative attempt: the initiation, the negotiations at the international level, and the eventual domestic ratification. The book reaches the surprising conclusion that theorists, neo-Institutionalists and Realists alike, have overestimated the likelihood of cooperation among states.

Balance of Payments and Exchange Rate Theories Norman C. Miller, 2002-01-01 Norman Miller provides a fresh perspective on balance of payments and exchange rate theories, including intertemporal open economy models that focus on the optimum current account. To this end, he proves that any non-zero balance of payments must always be associated with a disequilibrium in either a commodity or an asset market. In this rigorous yet readable book, important welfare and policy implications are carefully examined. Norman Miller develops a new theory of the balance of payments associated with commodity market disequilibrium, a loanable funds theory of exchange rate, and a modern foreign exchange market theory of the exchange rate that incorporates capital flows.

The Tax Treatment of Government Bonds Mr. John Norregaard, 1997-03-01 In their effort to finance fiscal deficits at a reasonable cost, governments compete with other users of financial capital. Governments, however, are in the unique position that they are the only debt suppliers that can determine the taxation of debt instruments they issue. Following an overview of the current tax treatment of government bonds in OECD countries, this paper argues that on purely economic grounds, there are no reasons for exempting interest on government bonds. Administrative difficulties in capturing interest on many other debt instruments in the tax net may, however, provide a rationale for doing so.

International Evidence on Tradables and Nontradables Inflation Mr. Jose De Gregorio, Holger C. Wolf, Mr. Alberto Giovannini, 1994-03-01 Using 1970-85 sectoral data for the OECD, we find that inflation in nontradable goods exceeds inflation in tradables. We identify a demand shift towards nontradables and faster growth of total factor productivity in the tradable goods sector as the prime causes of the differential inflation. In addition, disinflation attempts and the exchange rate regime appear to have exerted significant influence on the relative inflation rate.

Exercises in Intertemporal Open Economy Macroeconomics Thomas H. Krueger, Jonathan David Ostry, Chi-Wa Yuen, 1997 This exercise manual has been revised to be a companion volume to the third edition of *Fiscal Policies and the World Economy* by Jacob Frenkel and Assaf Razin. It includes new material on endogenous growth, convergence, and an extension of the Mundell-Flemming model.

Macroeconomics, second edition Alan J. Auerbach, Laurence J. Kotlikoff, 1998-07-31 Many undergraduate texts treat macroeconomics as a set of distinct topics rather than as a unified body of theory and empirical findings In contrast this text by Alan Auerbach and Laurence Kotlikoff uses a single analytic framework the two period life cycle model to explore and connect each of the major issues in contemporary macroeconomics The model describes the evolution of the economy over time in terms of the behavior of overlapping generations of individuals each of whom lives for two periods youth and old age This versatile framework can encompass most macroeconomic schools of thought through the alteration of key assumptions The use of one basic model also allows the authors to explore important topics not always addressed adequately in other texts these include credit constraints real business cycles generational accounting and international capital flows markets Written in a clear accessible style this shortened and simplified second edition provides a systematic way to interpret macroeconomic outcomes to understand various policy proposals and to appreciate how individuals and firms fit into the big picture
