forests vast deposits of oil gas and coal various ores major rivers such as the Volga Don and Angara and extensive biodiversity These resources and animals as well as the people who lived in the former Soviet Union Slavs Armenians Georgians Azeris Kazakhs and Tajiks indigenous Nenets and Chukchi were threatened by environmental degradation and extensive pollution This environmental history of the former Soviet Union explores the impact that state economic development programs had on the environment The authors consider the impact of Bolshevik ideology on the establishment of an extensive system of nature preserves the effect of Stalinist practices of industrialization and collectivization on nature and the rise of public involvement under Khrushchev and Brezhnev and changes to policies and practices with the rise of Gorbachev and the break up of the USSR

Nature's End S. Sörlin, P. Warde, 2009-07-23 Environmental History as a distinct discipline is now over a generation old with a large and diverse group of practitioners around the globe This book provides a reflection on the achievements diversity and direction of environmental history in its varied national international and continental contexts

The Ecology of Oil Myrna I. Santiago, 2006-08-14 Publisher Description *The Green and the Brown* Frank Uekötter, 2006-08-14 This study provides the first comprehensive discussion of conservation in Nazi Germany Looking at Germany in an international context it analyses the roots of conservation in the late 19th century the gradual adaptation of racist and nationalist thinking among conservationists in the 1920s and their indifference to the Weimar Republic It describes how the German conservation movement came to cooperate with the Nazi regime and discusses the ideological and institutional lines between the conservation movement and the Nazis Uekoetter further examines how the conservation movement struggled to do away with a troublesome past after World War II making the environmentalists one of the last groups in German society to face up to its Nazi burden It is a story of ideological convergence of tactical alliances of careerism of implication in crimes against humanity and of deceit and denial after 1945 It is also a story that offers valuable lessons for today's environmental movement

Pipe Dreams Maya K. Peterson, 2019-05-23 A long environmental history of the Aral Sea region focusing on colonization and development in Russian and Soviet Central Asia

Negotiating a River Daniel MacFarlane, 2014-03-01 A megaproject half a century in the making the planning and building of the St Lawrence Seaway and Power Project is one of the defining episodes in North American history Possibly the largest construction undertaking in Canadian history and one of the most ambitious borderlands projects ever embarked upon by two countries it also required decades of negotiation and the controversial relocation of thousands of people *Negotiating a River* looks at the profound impacts of this megaproject from the complex diplomatic negotiations political manoeuvring and environmental diplomacy to the implications on national identities and transnational relations

Empire and Ecology in the Bengal Delta Debjani Bhattacharyya, 2018-05-24 What happens when a distant colonial power tries to tame an unfamiliar terrain in the world's largest tidal delta This history of dramatic ecological changes in the Bengal Delta from 1760 to 1920 involves land water and humans tracing the stories and struggles that link them together Pushing beyond narratives

of environmental decline Bhattacharyya argues that property thinking a governing tool critical in making land and water discrete categories of bureaucratic and legal management was at the heart of colonial urbanization and the technologies behind the draining of Calcutta The story of ecological change is narrated alongside emergent practices of land speculation and transformation in colonial law Bhattacharyya demonstrates how this history continues to shape our built environments with devastating consequences as shown in the Bay of Bengal s receding coastline

Feral Animals in the American South Abraham H. Gibson, 2016-08-30 The relationship between humans and domestic animals has changed in dramatic ways over the ages and those transitions have had profound consequences for all parties involved As societies evolve the selective pressures that shape domestic populations also change Some animals retain close relationships with humans but many do not Those who establish residency in the wild free from direct human control are technically neither domestic nor wild they are feral If we really want to understand humanity s complex relationship with domestic animals then we cannot simply ignore the ones who went feral This is especially true in the American South where social and cultural norms have facilitated and sustained large populations of feral animals for hundreds of years *Feral Animals in the American South* retells southern history from this new perspective of feral animals

Water in North American Environmental History Martin V. Melosi, 2022-06-07 *Water in North American Environmental History* offers 25 cases studies that explore the range of uses and perceptions of water throughout Canadian Mexican and United States history Water has served a myriad of purposes historically as human sustenance agricultural irrigation sanitation fire protection military defense power generation transportation and much more Water and its uses provide an excellent entrance into the study of humans and the environment not only because water is a vital resource for life but also because water as a medium is so intimately woven into the everyday experiences of humans and into society s economic political and social fabric A North American perspective is not representative of the world s water use but it is an area with a linked history and many overlapping human and environmental features and concerns With a continental perspective the book explores many disparate topics without being confined to the history and experiences of just one country The chapters are short but descriptive and departure points for what they tell us about the human experience in dealing with water and the environmental implications of water use The text leads students to consider water in relation to society and to the past The book will be of interest to students of environmental history geography and the environmental sciences

Empire of Timber Erik Loomis, 2016 This is the first book to center labor unions as actors in American environmental policy

Made Modern Edward Jones-Imhotep, Tina Adcock, 2018-12-14 Science and technology have shaped not only economic empires and industrial landscapes but also the identities anxieties and understandings of people living in modern times *Made Modern* Science and Technology in Canadian History draws together leading scholars from a wide range of fields to enrich our understanding of history inside and outside Canada s borders The book s chapters examine how science and technology have allowed Canadians to imagine and reinvent

themselves as modern Focusing on topics including exploration scientific rationality the occult medical instruments patents communication and infrastructure the contributors situate Canadian scientific and technological developments within larger national and transnational contexts The first major collection of its kind in thirty years *Made Modern* explores the place of science and technology in shaping Canadians experience of themselves and their place in the modern world *Across Forest, Steppe, and Mountain* David A. Bello, 2016-02-04 In this book David Bello offers a new and radical interpretation of how China's last dynasty the Qing 1644-1911 relied on the interrelationship between ecology and ethnicity to incorporate the country's far flung borderlands into the dynasty's expanding empire The dynasty tried to manage the sustainable survival and compatibility of discrete borderland ethnic regimes in Manchuria Inner Mongolia and Yunnan within a corporatist Han Chinese imperial political order This unprecedented imperial unification resulted in the great human and ecological diversity that exists today Using natural science literature in conjunction with under utilized and new sources in the Manchu language Bello demonstrates how Qing expansion and consolidation of empire was dependent on a precise and intense manipulation of regional environmental relationships *The Oxford Handbook of Environmental History* Andrew C. Isenberg, 2017 The Oxford Handbook of Environmental History draws on a wealth of new scholarship to offer diverse perspectives on the state of the field **Trout Culture** Jen Corrinne Brown, 2015-05-01 From beer labels to literary classics like *A River Runs Through It* trout fishing is a beloved feature of the iconography of the American West But as Jen Brown demonstrates in *Trout Culture: How Fly Fishing Forever Changed the Rocky Mountain West* the popular conception of Rocky Mountain trout fishing as a quintessential experience of communion with nature belies the sport's long history of environmental manipulation engineering and ultimately transformation A fly fishing enthusiast herself Brown places the rise of recreational trout fishing in a local and global context Globally she shows how the European sport of fly fishing came to be a defining tourist attracting feature of the expanding 19th century American West Locally she traces the way that the burgeoning fly fishing tourist industry shaped the environmental economic and social development of the Western United States introducing and stocking favored fish species eradicating the less favored native trash fish changing the courses of waterways and leading to conflicts with Native Americans fishing and territorial rights Through this analysis Brown demonstrates that the majestic trout streams often considered a timeless feature of the American West are in fact the product of countless human interventions adding up to a profound manipulation of the Rocky Mountain environment <https://www.youtube.com/watch?v=ZKMwEkKj9jg>

The Wired Northwest Paul W. Hirt, 2012-10-18 The Pacific Northwest holds an abundance of resources for energy production from hydroelectric power to coal nuclear power wind turbines and even solar panels But hydropower is king Dams on the Columbia Snake Fraser Kootenay and dozens of other rivers provided the foundation for an expanding regionally integrated power system in the U.S. Northwest and British Columbia A broad historical synthesis chronicling the region's first century of electrification Paul Hirt's new study reveals how the region's citizens struggled to build a power

system that was technologically efficient financially profitable and socially and environmentally responsible Hirt shows that every energy source comes with its share of costs and benefits Because Northwest energy development meant river development the electric power industry collided with the salmon fishing industry and the treaty rights of Northwest indigenous peoples from the 1890s to the present Because U S federal agencies like the Army Corps of Engineers and the U S Bureau of Reclamation built many of the large dams in the region a significant portion of the power supply is publicly owned initiating contentious debates over how that power should best serve the citizens of the region Hirt dissects these ongoing battles evaluating the successes and failures of regional efforts to craft an efficient yet socially just power system Focusing on the dynamics of problem solving governance and the tense relationship between profit seeking and the public interest Hirt s narrative takes in a wide range of players not only on the consumer side where electricity transformed mills mines households commercial districts urban transit factories and farms but also power companies operating at the local and regional level and investment companies that financed and in some cases parasitized the operators His study also straddles the international border It is the first book to compare energy development in the U S Northwest and British Columbia Both engaging and balanced in its treatment of all the actors on this expansive stage The Wired Northwest helps us better understand the challenges of the twenty first century as we try to learn from past mistakes and re design an energy grid for a more sustainable future

[Fixing Niagara Falls](#) Daniel Macfarlane, 2020-09-01 Since the late nineteenth century Niagara Falls has been heavily engineered to generate energy behind a flowing facade designed to appeal to tourists Fixing Niagara Falls reveals the technological feats and cross border politics that facilitated the transformation of one of the most important natural sites in North America Daniel Macfarlane details how engineers bureaucrats and politicians conspired to manipulate the world s most famous waterfall Essentially they turned this natural wonder into a tap huge tunnels divert the waters of the Niagara River around the Falls which ebb and flow according to the tourism calendar To hide the visual impact of diverting the majority of the water the United States and Canada cooperated to install massive control works while reshaping and shrinking the Horseshoe Falls This book offers a unique interdisciplinary perspective on how the Niagara landscape ultimately embodies both the power of technology and the power of nature
