Fish Processing Technology:

Fish Processing Technology George M. Hall, 2012-12-06 As with the first edition this book includes chapters on established fish processes and new processes and allied issues The first five chapters cover fish biochemistry affecting processing curing surimi and fish mince chilling and freezing and canning These established processes can still show innovations and improved theory although their mature status precludes major leaps in knowledge and technology The four chapters concerned with new areas relevant to fish processing are directed at the increasing globalisation of the fish processing industry and the demands from legislation and the consumer for better quality safer products One chapter reviews the methods available to identify fish species in raw and processed products The increased demand for fish products and the reduced catch of commercially important species has lead to adulteration or substitution of these species with cheaper species The ability to detect these practices has been based on some elegant analytical techniques in electrophoresis

Govindan, 1987-01-01 *FISH AND KRILL PROTEIN: Processing Technology* Taneko Suzuki, 1981-06 In her book Dr Taneko Suzuki shows us how a modern fish processing industry using complex technology has evolved from the traditional methods of fish preparation long in use in Japan With only a small proportion of arable land for

growing food the Japanese have always looked to the sea and fortunately have been blessed with a rich and varied aquatic fauna Over the ages the Japanese have learnt not only how to make maximum nutritional use of their marine resources but also how to present them as attractive food items As a result the visual impact and organoleptic properties of the vast array of fishery products make Japanese cuisine one of the most exciting in the world In addition the Japanese have developed a strong tradition of quality whether for the small quantities of fish used in the past to add interest to a monotonous rice diet or for the larger quantities of raw and cooked products required by today's affluent society The growth of the Japanese fishing industry paralleled the phenomenal industrial developments of the post war years It continued until Japanese fleets were in action all over the world trying to satisfy the demands of a booming economy for high quality fishery products All the time technology was being developed to make use of unusual species as raw material for traditional products
