Nature's Holism Laurence Evans, 1999-08 In the association of the bee and the flower is a very advanced reflection of the process of evolution through natural selection Nature's Holism explores the coevolution of long associated species arriving at a holistic view of nature where the compatibility between species is significant In nature there are two interacting forces There is the numerical increase in numbers of a species termed a force of perpetuity Increasing numbers of a single species have an inevitable impact on the environment However as each species survives within an ecological context there is a feedback from the ecosystem as numbers increase requiring a necessary compatibility with the ecosystem Fitness is therefore defined not only by quantitative representation of genes in the next generation perpetuity but also the qualitative condition of compatibility with the habitat or ecosystem that provided the conditions and resources for this success

Time Maps Eviatar Zerubavel, 2020-03-04 The pioneering sociologist and author of *The Seven Day Circle* continues his analysis of time with this fascinating look at history as social construct Who were the first people to inhabit North America Does the West Bank belong to the Arabs or the Jews Why are racists so obsessed with origins Is a seventh cousin still a cousin Why do some societies name their children after dead ancestors As Eviatar Zerubavel demonstrates in *Time Maps* we cannot answer burning questions such as these without a deeper understanding of how we envision the past In a pioneering attempt to map the structure of collective memory Zerubavel considers the cognitive patterns we use to organize the past and the social grammar of conflicting interpretations of history Drawing on fascinating examples that range from Hiroshima to the Holocaust and from ancient Egypt to the former Yugoslavia Zerubavel shows how we construct historical origins how we tie discontinuous events together into stories how we link families and entire nations through genealogies and how we separate

distinct historical periods from one another through watersheds such as the invention of fire or the fall of the Berlin Wall Time Maps extends beyond all of the old clichés about linear circular and spiral patterns of historical process and provides us with models of the actual legends used to map history brilliant and elegant Hayden White University of California Santa Cruz
