First Steps In Maple:

First Steps in Maple Werner Burkhardt, 2012-12-06 Maple is a computer algebraic system with a fast growing number of users in schools universities and other institutions Intended for anyone who is encountering Maple for the first time First Steps in Maple provides a detailed step by step introduction teaching by way of examples taken from many areas of mathematics It is particularly suitable for undergraduates and has self test problems with solutions for each chapter

Introduction to Maple Andre HECK, 2012-12-06 The first edition of this book has been very well received by the community The new version 4 of Maple V contains so many new mathematical features and improvements in the user interface that Waterloo Maple Inc markets it as the Power Edition These two facts have made it necessary to write a second edition within a short period of the first I corrected typographical errors rephrased text updated and improved many examples and added much new material Hardly any chapter has been left untouched Substantially changed or added sections and chapters address the assume facility I/O approximation theory integration composite data types simplification graphics differential equations and matrix algebra Tables summarize features command options etc and constitute a quick reference The enlarged index of the book has been carefully compiled to make locating search items quick and easy Many new examples have been included showing how to use Maple as a problem solver how to assist the system during computations and how to extend its built in facilities About the Maple Version Used The second edition of this book is fully revised and updated to Maple V Release 4 More precisely the second edition of this book was produced with Maple V Release 4 beta 3 on a SUN SPARCstation 20 Model 71 There should be hardly any difference between this beta version and the final release only minor differences in the user interface are not excluded *Advanced Problem Solving Using Maple* William P Fox, William Bauldry, 2020-11-09 Advanced Problem Solving Using Maple™ Applied Mathematics Operations Research Business Analytics and Decision Analysis applies the mathematical modeling process by formulating building solving analyzing and criticizing mathematical models Scenarios are developed within the scope of the problem solving process The text focuses on discrete dynamical systems optimization techniques single variable unconstrained optimization and applied problems and numerical search methods Additional coverage includes multivariable unconstrained and constrained techniques Linear algebra techniques to model and solve problems such as the Leontief model and advanced regression techniques including nonlinear logistics and Poisson are covered Game theory the Nash equilibrium and Nash arbitration are also included Features The text's case studies and student projects involve students with real world problem solving Focuses on numerical solution techniques in dynamical systems optimization and numerical analysis The numerical procedures discussed in the text are algorithmic and iterative Maple is utilized throughout the text as a tool for computation and analysis All algorithms are provided with step by step formats About the Authors William P Fox is an emeritus professor in the Department of Defense Analysis at the Naval Postgraduate School Currently he is an adjunct professor Department of

Mathematics the College of William and Mary He received his PhD at Clemson University and has many publications and scholarly activities including twenty books and over one hundred and fifty journal articles William C Bauldry Prof Emeritus and Adjunct Research Prof of Mathematics at Appalachian State University received his PhD in Approximation Theory from Ohio State He has published many papers on pedagogy and technology often using Maple and has been the PI of several NSF funded projects incorporating technology and modeling into math courses He currently serves as Associate Director of COMAP's Math Contest in Modeling MCM

Nonlinear Dynamic in Engineering by Akbari-Ganji'S Method Mohammadreza Akbari, Alireza Ahmadi, Davood Domairry Ganji, 2015-11-10 In the present book attempts have been made to conquer the difficulty of solving nonlinear differential equations especially the highly nonlinear ones A convenient approach AGM Akbari Ganji's method has been proposed to solve all the existing nonlinear ordinary differential equations up to now Here all the existing nonlinear ODEs have been divided into some categories and for each of them an innovative technique has been introduced to find their exact solution Moreover a suitable technique has been proposed to evaluate the precision of the acquired solution which can be utilized when there is not any exact solution and the problem is not solvable by numerical methods such as some kinds of inverse problems One of the significant nobilities of this book refers to the ability of AGM in solving partial differential equations in different aspects for instance fluid mechanics heat transfer and vibration as discussed in the sixth chapter Eventually we hope this book can be considered as a suitable guide for all the people who deal with nonlinear differential equations
