Norton, 2000-01-01 Explains how things from everyday life are made, built and used and tells what goes on in stores, offices and in the city. *A Day in a Working Life* Gary Westfahl, 2015-04-21 Ideal for high school and college students studying history through the everyday lives of men and women, this book offers intriguing information about the jobs that people have held from ancient times to the 21st century. This unique book provides detailed studies of more than 300 occupations as they were practiced in 21 historical time periods ranging from prehistory to the present day. Each profession is examined in a compelling essay that is specifically written to inform readers about career choices in different times and cultures and is accompanied by a bibliography of additional sources of information, sidebars that relate historical issues to present day concerns as well as related historical documents. Readers of this work will learn what each profession entailed or entails on a daily basis, how one gained entry to the vocation, training methods and typical compensation levels for the job. The book provides sufficient specific detail to convey a comprehensive understanding of the experiences, benefits and downsides of a given profession. Selected accompanying documents further bring history to life by offering honest testimonies from people who actually worked in these occupations or interacted with those in that field. **Textual Curation** Krista

Kennedy, 2016-11-01 A study of the roles community financial support, texts, information structures, interfaces and technology play in collaborative works. Wikipedia is arguably the most famous collaboratively written text of our time, but few know that nearly three hundred years ago Ephraim Chambers proposed an encyclopedia written by a wide range of contributors from illiterate craftspeople to titled gentry. Chambers wrote that incorporating information submitted by the public would considerably strengthen the second edition of his well-received *Cyclopædia*, which relied on previously published information. In *Textual Curation*, Krista Kennedy examines the editing and production histories of the *Cyclopædia* and Wikipedia, the ramifications of robot-written texts and the issues of intellectual property, theory and credit. Kennedy also documents the evolution of both encyclopedias as well as the participation of central players in discussions about the influence of technology and collaboration in early modern and contemporary culture. Through this comparative study based on extensive archival research and data-driven analysis, Kennedy illuminates the deeply situated nature of authorship, which is dependent on cultural approval and stable funding sources as much as it is on original genius and the ownership of intellectual property. Kennedy's work significantly revises long-held notions of authorial agency and autonomy, establishing the continuity of new writing projects such as wikis with longstanding authorial practices that she calls textual curation. This study examines a

wide range of texts that recompose accepted knowledge into reliable complex reference works combining contributions of article text alongside less commonly considered elements such as metadata vocabularies cross indexing and the development of print and digital interfaces Comparison of analog and networked texts also lays bare the impact of technological developments both in the composing process and in the topics that can practically be included in such a text By examining the human and technological curators that support these encyclopedias as well as the discourses that surround them Kennedy develops textual curation as a longstanding theory and process that offers a nuanced construction of authorship
