First Man Into Space:

The First Man In Space Alistair David Todd, 2017-10-25 The First Man In Space is a dramatic poem taking the symbol of the astronaut to meditate on humanity's ability to develop and control their environment right to the very limits of the skies. Written in four parts it looks at the life of the unnamed astronaut in his childhood, his training, his experience in space and finally him growing old back on Earth. Reflecting on the philosophic as well as the scientific and also on the isolation it takes to achieve such a feat. The First Man In Space takes you to outer and inner reaches of the human will and human capability to overcome.

First American Into Space Robert Silverberg, 2008-04-01 Here is the spine tingling true story of that first American blast into the realm of the stars of the men who underwent rigorous training for that epic mission and of the one man who made the safe journey. This is the factual account of the history of rocketry, its triumphs and its failures, our shame in the neglect of it and our pride in its later accomplishments. Here too is a glimpse into the future as only science fiction writer Robert Silverberg could foresee: orbiting space stations, a man on the moon and more.

The Cold War, the Space Race, and the Law of Outer Space Albert K. Lai, 2021-07-26 The Cold War, the Space Race and the Law of Outer Space tells the story of one of the United Nations' most enduring and least known achievements: the adoption of five multilateral treaties that compose the international law of outer space. The story begins in 1957 during the International Geophysical Year, the largest ever cooperative scientific endeavor that resulted in the launch of Sputnik. Although satellites were first launched under the auspices of peaceful scientific cooperation, the potentially world-ending implications of satellites and the rockets that carried them was obvious to all. By the 1960s, the world faced the prospect of nuclear testing in outer space, the placement of weapons of mass destruction in orbit and the militarization of the moon. This book tells the story of how the United Nations tried to seize the promise of peace through scientific cooperation and to ward off the potential for war in the Space Age through the adoption of the Outer Space Treaty, the Rescue and Return Agreement, the Liability Convention, the Registration Convention and the Moon Agreement. Interdisciplinary in approach, the book will be of interest to scholars in law, history and other fields who are interested in the Cold War, the Space Race and outer space law.

[Meta-Geopolitics of Outer Space](#) N. Al-Rodhan, 2012-05-11 Al Rodhan sheds new light on the debate about the geopolitics of outer space, going beyond applying traditional International Relations approaches to space power and security by introducing a multidimensional spatial framework. The meta geopolitics framework includes space and expands classical power considerations to cover seven state capacities.
