The Rhetorical Turn Herbert W. Simons, 2011-02-15 We have only recently started to challenge the notion that serious inquiry can be free of rhetoric that it can rely exclusively on hard fact and cold logic in support of its claims Increasingly scholars are shifting their attention from methods of proof to the heuristic methods of debate and discussion the art of rhetoric to examine how scholarly discourse is shaped by tropes and figures by the naming and framing of issues and by the need to adapt arguments to ends audiences and circumstances Herbert W Simons and the contributors to this important collection of essays provide impressive evidence that the new movement referred to as the rhetorical turn offers a rigorous way to look within and across the disciplines The Rhetorical Turn moves from biology to politics via excursions into the rhetorics of psychoanalysis decision science and conversational analysis Topics explored include how rhetorical invention guides scientific invention how rhetoric assists political judgment and how it integrates varying approaches to meta theory Concluding with four philosophical essays this volume of case studies demonstrates how the inventive and persuasive dimensions of scholarly discourse point the way to forms of argument appropriate to our postmodern age The Data World Theory 2.0 Dennis Hans Ladener, 2020 **The Worst Enemy of Science?** Paul Feyerabend, 2000 This stimulating collection is devoted to the life and work of the most flamboyant of twentieth century philosophers Paul Feyerabend Feyerabend's radical epistemological claims and his stunning argument that there is no such thing as scientific method were highly influential during his life and have only gained attention since his death in 1994 The essays that make up this volume written by some of today's most respected philosophers of science many of whom knew Feyerabend as students and colleagues cover the diverse themes in his extensive body of work and present a personal account of this fascinating thinker

Instructional-design Theories and Models: A new paradigm of instructional theory Charles M. Reigeluth, 1983 Instructional theory describes a variety of methods of instruction different ways of facilitating human learning and development and when to use and not use each of those methods It is about how to help people learn better This volume provides a concise summary of a broad sampling of new methods of instruction currently under development helps show the interrelationships among these diverse theories and highlights current issues and trends in instructional design It is a sequel to *Instructional Design Theories and Models An Overview of Their Current Status* which provided a snapshot in time of the status of instructional theory in the early 1980s Dramatic changes in the nature of instructional theory have occurred since then partly in response to advances in knowledge about the human brain and learning theory partly due to shifts in educational philosophies and beliefs and partly in response to advances in information technologies These changes have made new methods of instruction not only possible but also necessary in order to take advantage of new instructional capabilities offered by the new technologies These changes are so dramatic that many argue they constitute a new paradigm of instruction which requires a new paradigm of instructional theory In short there is a clear need for this Volume II of

Instructional Design Theories and Models To attain the broad sampling of methods and theories it presents and to make this book more useful for practitioners as well as graduate students interested in education and training this volume contains twice as many chapters but each half as long as the ones in Volume I and the descriptions are generally less technical Several unique features are provided by the editor to help readers understand and compare the theories in this book Chapter 1 which discusses the characteristics of instructional theory and the nature of the new paradigm of instruction helps the reader identify commonalities across the theories Chapter forewords which summarize the major elements of the instructional design theories are useful for reviewing and comparing theories as well as for previewing a theory to decide if it is of interest and for developing a general schema that will make it easier to understand Editor s notes provide additional help in understanding and comparing the theories and the new paradigm of instruction to which they belong Units 2 and 4 have introductory chapters to help readers analyze and understand the theories in those units This is an essential book for anyone interested in exploring new approaches to fostering human learning and development and thinking creatively about ways to best meet the needs of learners in all kinds of learning contexts Readers are invited to use Dr Charles Reigeluth s Web site to comment and to view others comments about the instructional design theories in this book as well as other theories Point your browser to www.indiana.edu/idtheory

Bread from Heaven Bernhard Blankenhorn, 2021-08-07 Bread from Heaven offers a contemporary theological synthesis on the Eucharist that brings together classical and critical biblical exegesis debates on the early history of the Christian liturgy patristic doctrine the teachings offered by the Councils of Florence Trent and Vatican II and the Church s *lex orandi* all within a framework provided by the Eucharistic theology of Thomas Aquinas The volume begins with Christ s Bread of Life discourse in John 6 in light of the Old Testament theme of the manna and the Synoptic accounts of the Last Supper These biblical texts offer solid foundation for a theology of Eucharistic sacrifice presence and Communion It then continues with a historical and systematic study of the institution of the Eucharist by Christ with special attention given to the emergence of the first Eucharistic prayers Then follows a survey of key Christological and ecclesiological themes which undergird Eucharistic theology The chapters on Eucharistic sacrifice and presence form the heart of the work Here the focus moves to key conciliar patristic and Thomistic insights on these themes Bread from Heaven clarifies misunderstandings of Eucharistic sacrifice and renders transubstantiation accessible to beginners Blankenhorn concludes with a study of the consecration the minister of the Eucharist and the fruits of communion The chapter on the debate over the words of institution and the epiclesis gives a fresh perspective that integrates both eastern and western tradition The study of the Eucharistic celebrant strikes a balance between a spirituality of the priest as acting in persona Christi and of the priest as praying in persona ecclesiae The concluding chapter centers on the Eucharist s unitive mystical fruits in the Church This textbook is ideal for an advanced undergraduate or graduate course on Eucharistic theology It also seeks to advance the debate on several controversial historical and speculative issues in sacramental

theology Theory and Explanation in Geography Henry Wai-chung Yeung, 2023-08-15 THEORY AND EXPLANATION IN GEOGRAPHY With this book Henry Yeung puts Geography back into the driver's seat of new theory development. Foregrounding mid-range theories and mechanism-based explanations, he offers a pragmatic approach that has the capacity to shape the wider social sciences for years to come. The timing of this intervention is pitch-perfect as scholars search for ways to understand and intervene in an increasingly distrustful and polarized world. KATHARYNE MITCHELL Distinguished Professor, University of California Santa Cruz, USA. In *Theory and Explanation in Geography*, Yeung presents us with a rare thing: an argument for geographical theory with forms of causal explanation at its heart. The book is both modest and ambitious. Modest in its insistence on mid-level theory without a call for some new turn or advocacy for any particular approach. Ambitious in its insistence that existing theoretical traditions are inadequate or incomplete insofar as they lack causal explanatory power. Geographers will be inspired and/or infuriated by Yeung's arguments in this provocative and cogently argued call to theoretical arms for many years to come. TIM CRESSWELL OGILVIE Professor of Geography, University of Edinburgh, UK. Critical human geography possesses a distinctive theory culture: pluralist, creative, distributed, restless, contested, prone to turning wary of orthodoxies and fixed positions. In this original and provocative contribution, the leading economic geographer Henry Yeung steps out beyond his home turf to engage styles and practices of theorizing across this diverse field, carving out a new remit and rubric for middle-range theorizing. JAMIE PECK Canadian Research Chair and Distinguished University Scholar, University of British Columbia, Canada. Grounded in a generous reading of a multitude of critical approaches in human geography and their diverse conceptions of theory, *Theory and Explanation in Geography* draws upon cutting-edge debates on the mechanism-based approach to theory and explanation in analytical sociology, political science, and the philosophy of social sciences to inform current and future geographical thinking on theory. This consolidated conceptual work represents an extension and much further development of the author's well-cited works on relational geography, critical realism, and causal explanation, process-based methodology, globalization, and the theory of global production networks and theorizing back and situated knowledges that were published in leading journals in Geography. The work has several chapters that identify new directions for Geography's current and future engagement with the wider social sciences and relevant research agendas in geographical thought. Its main chapters provide the necessary conceptual toolkits for mobilizing such an expanding research program in the 2020s and beyond. Compared to typical texts on geographical thought, this book is less retrospective and historical and more prospective in nature. Detailing why and how mid-range explanatory theories can be better developed through causal mechanisms and relational thinking that have been revitalized in the social sciences, *Theory and Explanation in Geography* is an essential read for academics, geographers, and scholars seeking unique perspective on an important facet of the field. *In Search of Dreamtime* Tomoko Masuzawa, 1993-12. Extended discussion of the concepts of time and origin in the work of Durkheim, Muller, and Freud. Ch. 5 contrasts the

representation of the Dreaming in Eliade's Australian religions and Munns Walbiri iconography role of dreams and graphic representation in Walbiri women's lives their relation to formal analysis of the Dreaming argues that the Dreaming should be seen as a measure of difference and against its perception as an origin ground and designs historical consciousness

Einstein's Theories of Relativity and Gravitation James Malcolm Bird, 1921 Einstein's theory of relativity confounded and excited both professional and amateur scientists with its explanation of the intricacies of how the world and the universe truly work rather than how people wished or believed they worked His view of relativity dismantled Newton's theory of space and time as absolutes adding the concept of curved space time which deals with the velocity of motion Einstein explains his theory of physics in a way that was designed not only for scientists with a knowledge of the complicated math involved but for the general reader as well *Christian Apologetics* Walter Devivier, 1908
