Gordon W. Gribble, John A. Joule

Fischer Indole Synthesis:

The Fischer Indole Synthesis Brian Robinson, 1982 A comprehensive survey of the Fischer indole synthesis Emphasizes three main features of the reaction its development the clarification of its mechanism and the utilization of it and its extensions in the synthetic process Covers the investigations of the reaction from its discovery in 1883 through the last published report in 1981 **Studies on the Fischer Indole Synthesis** Earl Eugene Fisher, 1948 *Kinetic Investigations of the Fischer Indole Synthesis* Paulus Isaac Th.. Scheltus, 1959

Name Reactions in Heterocyclic Chemistry Jie Jack Li, 2004-12-13 Covers important name reactions relevant to heterocyclic chemistry The field of heterocyclic chemistry has long presented a special challenge for chemists Because of the enormous amount and variety of information it is often a difficult topic to cover for undergraduate and graduate chemistry students even in simplified form Yet the chemistry of heterocyclic compounds and methods for their synthesis form the bedrock of modern medicinal chemical and pharmaceutical research Thus there is a great need for high quality up to date and authoritative books on heterocyclic synthesis helpful to both the professional research chemist as well as the advanced student *Name Reactions in Heterocyclic Chemistry* provides a one stop repository for this important field of organic chemistry The primary topics include three and four membered heterocycles five membered heterocycles including indoles furans thiophenes and oxazoles six membered heterocycles including quinolines isoquinolines and pyrimidines and other heterocycles Each name reaction is summarized in seven sections Description Historical perspective Mechanism Variations and improvements Synthetic utility Experimental References Authored by a team of world renowned contributors some of whom have discovered the very reactions they describe *Name Reactions in Heterocyclic Chemistry* represents a state of the art resource for students and researchers alike

Kinetic Investigations of the Fischer Indole Synthesis Paulus Isaac Theodoor Scheltus, 1959 **Towards an Efficient Fischer Indole Synthesis of 3,2'-biindoles** Joseph K. Kubert, Dartmouth College. Department of Chemistry, 2010

II. Studies on the Fischer Indole Synthesis John George Wallace, 1950 **A Study of the Fischer Indole Synthesis** Frank P. Robinson (Jr.), 1964 With the aim of gaining evidence in support of the proposed dienone imine intermediate in the Fischer indole synthesis several attempts were made to form a Diels Alder adduct of this intermediate by the thermal cyclization of simple phenylhydrazones in the presence of the dienophiles maleic anhydride and tetracyanoethylene Even though cyclization of the phenylhydrazones to the corresponding indoles occurred under the conditions used no adduct could be isolated With maleic anhydride as the dienophile hydrazide formation occurred instead Attempts to form such an adduct by cyclizing the diacetyl derivative of methyl ethyl ketone phenylhydrazone in the presence of maleic anhydride were also unsuccessful The attempted preparation of the diacetyl derivatives of 2,6-dimethylphenylhydrazones led to mono and diacylated 2,6-dimethylphenylhydrazines instead An improved technique for the identification of these latter compounds was devised This method consists of hydrogenolysis of the N-N bond of the acylated hydrazines with Raney nickel and hydrazine

followed by isolation and identification of the resulting fragments Finally when N methyl 2 6 dichlorophenylhydrazine was prepared and condensed with cyclohexanone under mild room temperature conditions two indoles were isolated and their structures proven by unambiguous syntheses The formation of these products is explained in terms of the proposed dienone imine intermediate This also represents the first known case of such a facile non catalytic Fischer indole synthesis

Studies on the Direction of Cyclization in the Fischer Indole Synthesis William Neal Schinske,1973 **Reactive Intermediates in the Fischer Indole Synthesis** Dorothy M. Walker,1967 **The Fischer Indole Synthesis with Substituted Hydrazines** Harlan Patrick Hamlow,1962 **Stereochemical Effects on the Direction of Cyclization in the Fischer Indole Synthesis** Raymond A. Lohr,1977 **A Mechanistic Study of the Fischer Indole Synthesis** Gurdip Singh Bajwa,1968

To obtain the dienone imine intermediate proposed in the Robinson mechanism of the Fischer indole synthesis the reaction of cyclohexanone with alkyl 2 6 dialkylphenylhydrazine and its hydrochloride was studied When the above reactants were heated in refluxing dry benzene and water removed azeotropically 8 9 dialkyl 1 2 3 4 tetrahydrocarbazole could be obtained in good yield Only two other products could be isolated from this reaction They were ammonium chloride and alkylamine hydrochloride The latter arose through the elimination of the alkyl group at the nitrogen atom and not from the alkyl group attached to the aromatic ring of the hydrazine Although neither the enehydrazine nor the dienone imine intermediate could be isolated the products of the reaction could be explained only through their intermediacy When the reaction of N methyl 2 6 dimethylphenylhydrazine with cyclohexanone was conducted at room temperature through the azeotropic removal of water under vacuum an oil was obtained which gave an indication of the presence of the expected enehydrazine in it All attempts to isolate this enehydrazine in pure form were unsuccessful Further when this oil was treated in benzene with maleic anhydride no Diels Alder adduct of the expected dienone imine could be isolated The inability to isolate or trap the dienone imine intermediate was ascribed to the presence of an enolizable hydrogen at a carbon atom symbol to the imine carbon of the former cyclohexanone ring When such an enolizable hydrogen in the dienone imine intermediate was eliminated by the use of isobutyraldehyde and the latter allowed to react with N methyl 2 6 dimethylphenylhydrazine hydrochloride a stable dienone imine hydrochloride was obtained This could be purified and converted to the free dienone imine This dienone imine reacted with tetracyanoethylene and maleic anhydride to give the reactions of secondary amines rather than to form the corresponding Diels Alder adducts The reaction with acetyl chloride gave N acetylation However this dienone imine could not be converted to the corresponding indole When a mixture of propionaldehyde and N methyl 2 6 dimethylphenylhydrazine hydrochloride was heated in refluxing dry benzene for 20 hours 1 3 7 trimethylindole 31% was obtained The latter was contaminated with 3 7 dimethyl indole 9% When the above reactants were heated in refluxing dry benzene for only 10 12 minutes a solid dienone imine hydrochloride containing isomeric contaminants was obtained When this material was again heated in refluxing dry benzene for 19 hours the reaction mixture

gave a 35% yield of 1,3,7-trimethylindole also contaminated with 3,7-dimethylindole 9% The isolation of a dienone imine and its conversion to the corresponding indole supports the mechanism proposed by Robinson for the Fischer indole synthesis
