Computing and Educational Studies Eugene F. Provenzo, Jr., 2014-05-01 This special issue calls for a greater awareness of computing as a critical area of study for those interested in educational studies. Its purpose is to open up a wider dialogue about computing and education than has previously existed in the field. The questions raised provide the basis for a lively discussion and analysis of the role of educational studies in interpreting the role of computing in our culture and educational system. This issue also provides a model for exploring other topics of similar significance and importance to the field in future issues of the journal.

The Wiley International Handbook of Educational Foundations Alan S. Canestrari, Bruce A. Marlowe, 2018-09-12 Promotes a model of critique for teachers, scholars, and policy makers to challenge established educational practice in a global context. The Wiley International Handbook of Educational Foundations features international scholars uniquely qualified to examine issues specific to their regions of the world. The Handbook provides readers with an alternative to the traditional texts in the foundations of education by taking aim at the status quo and by offering frameworks from which teachers and scholars of education can critically evaluate schools and schooling. Throughout the essays are grounded in a broad historical context, and the authors use an international lens to examine current controversies in order to provoke the kinds of discussion crucial for developing a critical stance. The Handbook is presented in six parts, each beginning with an Introduction to the subject. The sections featured are: Part I: Challenging Foundational
