Natural Kinds and Classification in Scientific Practice Catherine Kendig, 2015-12-22 This edited volume of 13 new essays aims to turn past discussions of natural kinds on their head Instead of presenting a metaphysical view of kinds based largely on an unempirical vantage point it pursues questions of kindness which take the use of kinds and activities of kinding in practice as significant in the articulation of them as kinds The book brings philosophical study of current and historical episodes and case studies from various scientific disciplines to bear on natural kinds as traditionally conceived of within metaphysics Focusing on these practices reveals the different knowledge producing activities of kinding and processes involved in natural kind use generation and discovery Specialists in their field the esteemed group of contributors use diverse empirically responsive approaches to explore the nature of kindness This groundbreaking volume presents detailed case studies that exemplify kinding in use Newly written for this volume each chapter engages with the activities of kinding across a variety of disciplines Chapter topics include the nature of kinds kindness kinding and kind making in linguistics chemical classification neuroscience gene and protein classification colour theory in applied mathematics homology in comparative biology sex and gender identity theory memory research race extended cognition symbolic algebra cartography and geographic information science The volume seeks to open up an as yet unexplored area within the emerging field of philosophy of science in practice and constitutes a valuable addition to the disciplines of philosophy and history of science technology engineering and mathematics

Thinking Big Data in Geography Jim Thatcher, Andrew Shears, Josef Eckert, 2018-04 Thinking Big Data in Geography offers a practical state of the field overview of big data as both a means and an object of research with essays from prominent and emerging scholars such as Rob Kitchin Renee Sieber and Mark Graham Part 1 explores how the advent of geoweb technologies and big data sets has influenced some of geography's major subdisciplines urban politics and political economy human environment interactions and geographic information sciences Part 2 addresses how the geographic study of

big data has implications for other disciplinary fields notably the digital humanities and the study of social justice The volume concludes with theoretical applications of the geoweb and big data as they pertain to society as a whole examining the ways in which user generated data come into the world and are complicit in its unfolding The contributors raise caution regarding the use of spatial big data citing issues of accuracy surveillance and privacy History in the Digital Age Toni Weller,2013 The digital age is affecting all aspects of historical study but much of the existing literature about history in the digital age can be alienating to the traditional historian who does not necessarily value or wish to embrace digital resources History in the Digital Age takes a more conceptual look at how the digital age is affecting the field of history for both scholars and students The printed copy the traditional archive and analogue research remain key constitute parts for most historians and for many will remain precious and esteemed over digital copies but there is a real need for historians and students of history to seriously consider some of the conceptual and methodological challenges facing the field of historical enquiry as we enter the twenty first century Including international contributors from a variety of disciplines History English Information Studies and Archivists this book does not seek either to applaud or condemn digital technologies but takes a more conceptual view of how the field of history is being changed by the digital age Essential reading for all historians **Picture Planning**

Perspectives Hugo de Vos,2004-01-06 This book investigates problems of GIS implementation in three Costa Rican ministries It reveals that embedding technology is part of complex institutional processes where actors and politics shape contexts By linking an historical analysis of land use Managing Geographic Information Systems Nancy J. Obermeyer,Jeffrey K. Pinto,2007-12-03 Now in a fully revised and expanded second edition this widely adopted text and practical reference addresses all aspects of developing and using geographic information systems GIS within an organization Coverage includes the role of the GIS professional how geographic information fits into broader management information systems the use of GIS in strategic planning and ways to navigate the organizational processes that support or inhibit the success of GIS implementation All chapters retained from the prior edition have been thoroughly updated to reflect significant technological empirical and conceptual advances as well as the changing contexts of GIS use New chapters discuss organizational politics metadata legal issues and GIS ethics **Digital Geographies** James Ash,Rob Kitchin,Agnieszka Leszczynski,2018-10-29 As digital technologies have become part of everyday life mediating tasks such as work travel consumption production and leisure they are having increasingly profound effects on phenomena that are of immediate concern to geographers These include the production of space spatiality and mobilities the processes practices and forms of mapping the contours of spatial knowledge and imaginaries and the formation and enactment of spatial knowledge politics Similarly there are distinct geographies of digital media such as those of the internet games and social media that have become indispensable to geographic practice and scholarship across sub disciplines regardless of conceptual approach This textbook presents a fully up to date synoptic and critical overview of how digital devices logics methods etc

are transforming geography It is divided into six inter related sections introduction to digital geographies digital spaces digital methods digital cultures digital economies digital politics With illustrious instructors and researchers contributing to every chapter Digital Geographies is the ideal textbook for courses concerning digital geographies digital and new media and Internet communications and the spatial knowledge of politics

The Geohistorical Approach Silvia Elena Piovan, 2020-05-14 This book gives a comprehensive view of the strengths and limits of the interdisciplinary methods that work together to form the geohistorical approach to geographical and geological sciences The geohistorical approach can be synthetically defined as a multi and interdisciplinary approach that uses techniques and perspectives mainly from geography history and natural sciences to examine topics that inform the space time knowledge of environment territory and

landscape The boundary between the application of physical and human science methods is large and hazy This volume exists at this boundary and offers an approach that utilizes both historical data from both physical and human records and GIScience e g GIS cartography GPS remote sensing to investigate the evolution of the environment territory and landscape through both space and time The first objective of this volume is to define the term geohistorical approach An entire chapter focuses on a review of the main disciplines that connect geography and history a review of the terms environment territory and landscape as objects of study of this approach and the definition and importance of the geohistorical approach The second goal is to describe the methods used in the geohistorical approach Eight chapters present the key methods also using examples of applications from the international context offering an awareness of the potentials limitations and accuracy of each method with particular focus on the integration of methods The third goal is to provide case studies to demonstrate the use and integration of geohistorical methods from both original material and published research A final chapter is dedicated to an interdisciplinary case study from the Venetian Plain Italy providing an example of the integration of almost all methods described in the book

Geographical Information Massimo Rumor, R. McMillan, Henk F. L. Ottens, 1996 Geographical Information is defined as the collection of data on real virtual objects which have a fixed place above on in or beneath the surface of the earth Geographical information involves all information on buildings roads pipelines cabling etc as well as boundaries air corridors topography and postcode areas the information can be administrative and geometric Changes in social and economic interests have caused the emphasis to shift over the years Virtual objects areas postcode areas in particular have attracted more interest in recent years This is closely related to the increased desirability of analysing and presenting policy information within certain spatial limits in which the introduction of Geographical Information Systems GIS and systems like GIS has played a significant role Geographical Information cannot be regarded as the informational side of one policy area Geographical information is not only necessary for the layout and management of space but also for such things as taxation environmental policy water management maintenance and protection of pipeline systems and making maps The volumes address the latest developments with respect to technological innovation scientific progress and advanced professional application in the field of geographical information In addition articles dealing with the state of the art and coming innovations with respect to major fields of GI research and application are included The books cover the following areas of specific interest topics with the current scope of geographical information research geographical information technology geographical information and environment geographical information planning geographical information in urban and regional government geographical information in utilities telecom and private enterprise geographical information education and awareness geographical information in Spain

GIS Algorithms Ningchuan Xiao, 2015-11-09 Geographic information systems GIS have become increasingly important in helping us understand complex social economic and natural dynamics where spatial components play a key role The critical algorithms used in GIS however are notoriously difficult to

both teach and understand in part due to the lack of a coherent representation GIS Algorithms attempts to address this problem by combining rigorous formal language with example case studies and student exercises Using Python code throughout Xiao breaks the subject down into three fundamental areas Geometric Algorithms Spatial Indexing Spatial Analysis and Modelling With its comprehensive coverage of the many algorithms involved GIS Algorithms is a key new textbook in this complex and critical area of geography
