Gis In Site Design New Tools For Design:

Measuring Landscapes Andre Botequilha Leitao, Joseph Miller, Jack Ahern, Kevin McGarigal, 2012-09-26 This practical handbook bridges the gap between those scientists who study landscapes and the planners and conservationists who must then decide how best to preserve and build environmentally sound habitats Until now only a small portion of the relevant science has influenced the decision making arenas where the future of our landscapes is debated and decided The authors explain specific tools and concepts to measure a landscape s structure form and change over time Metrics studied include patch richness class area proportion patch number and density mean patch size shape radius of gyration contagion edge contrast nearest neighbor distance and proximity These measures will help planners and conservationists make better land use decisions for the future GIS and Site Design Karen C. Hanna, Karen Calhoon Hanna, R. Brian Culpepper, 1998-04-20 Demonstrates how to use IBM PC or Macintosh based Geographic Information Systems GIS software for landscape architecture site design land planning and visual resource analysis including design of large sites such as subdivisions golf courses parks campuses greenways trails riparian restorations and more **GIS in Site Design** Karen Calhoon Hanna, 1999

The Built Environment Wendy R. McClure, Tom J. Bartuska, 2011-09-09 This book takes a sweeping view of the ways we build things beginning at the scale of products and interiors to that of regions and global systems In doing so it answers questions on how we effect and are affected by our environment and explores how components of what we make from products buildings and cities are interrelated and why designers and planners must consider these connections Urban Parks Between Safety and Aesthetics Isabella M. Mambretti, Isabella Margherita Mambretti, 2011 The question of how to live in the city and increase the quality of urban life creates new challenges for both urban policies and academic research Urban parks are important keys for achieving a broader understanding of the urban landscape Open green spaces in every form are essential for life in our ever more urbanised society and are becoming a vital issue for the liveability of the urban environment The purpose of the present research is to acquire a more thorough knowledge of the evaluation of urban parks The study uses statistical analysis methods combined with landscape planning and visualisation methods The research provides an innovative and sophisticated point of view along with the means to improve the comprehension of people s preferences for alternative urban park scenarios The results are expected to create an advanced discussion platform and make a contribution towards improving knowledge of the public s perception of urban parks The investigation was conducted with empirical experiments on two parks in Zurich The functional component of the research is the visualisation of spatial data using powerful visualisation tools The theoretical prospect is the achievement of broader knowledge about individuals perception of open green spaces focusing on previously unexplored experimental research combining conjoint analysis and visualisation methods The experiments created for the research are effective for modelling and explaining the significance that people assign to specific dimensions characterising different park scenarios Two motivations are at the base of the

research exploring the use of conjoint analysis methods to study virtual urban parks and evaluating the use of visual stimuli with conjoint analysis

The Urban Forest David Pearlmutter, Carlo Calafapietra, Roeland Samson, Liz O'Brien, Silvija Krajter Ostoić, Giovanni Sanesi, Rocío Alonso del Amo, 2017-02-27 This book focuses on urban green infrastructure the interconnected web of vegetated spaces like street trees parks and peri urban forests that provide essential ecosystem services in cities The green infrastructure approach embodies the idea that these services such as storm water runoff control pollutant filtration and amenities for outdoor recreation are just as vital for a modern city as those provided by any other type of infrastructure Ensuring that these ecosystem services are indeed delivered in an equitable and sustainable way requires knowledge of the physical attributes of trees and urban green spaces tools for coping with the complex social and cultural dynamics and an understanding of how these factors can be integrated in better governance practices By conveying the findings and recommendations of COST Action FP1204 GreenInUrbs this volume summarizes the collaborative efforts of researchers and practitioners from across Europe to address these challenges

Reader's Guide to the Social Sciences Jonathan Michie, 2014-02-03 This 2 volume work includes approximately 1 200 entries in A Z order critically reviewing the literature on specific topics from abortion to world systems theory In addition nine major entries cover each of the major disciplines political economy management and business human geography politics sociology law psychology organizational behavior and the history and development of the social sciences in a broader sense

Improving Technology Through Ethics Simona Chiodo, David Kaiser, Julie Shah, Paolo Volonté, 2024-02-24 This book deals with the ethics of technology and addresses specific ethical problems related to some emerging technologies mainly in the field of computer science from machine learning models to extracting value from data to human robot interaction The contributions are authored mainly by scholars in ICT and other engineering fields who reflect on ethical and societal issues emerging from their own research activity Thus rather uniquely the work overcomes the traditional divide between pure ethical theory that disregards what practitioners do and mere R D practice that ignores what theorists conceptualize Conversely the reader is enabled to understand what ethics means when it is actually put into work by engineering researchers The book arises from a joint program between MIT and Politecnico di Milano aimed at training early career researchers in addressing the ethical issues of technology and critically reflecting on the social impacts of the emerging and even disruptive technologies they are currently developing through their novel research Overall it aims at spreading the task of developing technologies that from the beginning are designed to be responsible for human life society and nature
