Glass Anvil:

Glasshouses and Glass Manufacturers of the Pittsburgh Region Jay W. Hawkins, 2009-04 The Pittsburgh region while well known for steelmaking was likewise an important glass manufacturing center in this country's history This book provides detailed accounts of the region's glassmakers from the first factory dating to 1795 through 1910 Glassmaking started out modestly with small glasshouses in Pittsburgh and up the Monongahela River in New Geneva during the final few years of the 18th century By the close of the 19th century the Pittsburgh region was producing more than half of all domestic window glass and the lion's share of most other forms of glass in the United States The original purpose of this manuscript was to assemble and record as accurately as possible the history of all of the glassworks and the glass manufacturers that operated them in Pittsburgh and the immediate surrounding region This book was designed to be a reference guide for anyone who is interested in the history of glass in western Pennsylvania The years companies were operating where the glassworks were located what types of glass and specific glass items did they make and what marks did they use is just some of the information that can be found in this book There are hundreds of individual companies and name changes listed in this volume It contains as much information about each company that could practically be included Even the most minor name or address change was recorded exactly as noted by contemporary sources As much as possible contemporary reference sources such as city directories early newspapers maps and journals were used to provide accurate and complete histories of the glasshouses Generally the better known companies will have much more of their history available However every known glassmaker and glasshouse was included regardless of how little information about them could be found This book is intended to aid researchers in the determination of the age and the origin of marked pieces as well as narrowing down potential manufacturers of unmarked objects The liberal reproduction of original advertisements and maps as well as the photographs of glass marks were included to complement and augment the narrative The format of this book was established to facilitate its use as a reference guide

Modern Glass Characterization Mario Affatigato, 2015-09-10 The book consists of a series of edited chapters each written by an expert in the field and focusing on a particular characterization technique as applied to glass The book covers a variety of techniques ranging from the very common like Raman and FTIR to the most recent and less well known ones like SEM for structural analysis and photoelastic measurements The level of the chapters make it suitable for researchers and for graduate students about to start their research work It will also discuss the technique itself background nuances when it comes to looking at glassy materials interpretation of results case studies and recent and near future innovations Fill a widening gap in modern techniques for glass characterization Provide much needed updates on the multiple essential characterization techniques

Gwatkin,2013-11-11 Developmental biology has been transformed recently by discoveries in the fields of molecular biology cell biology and immunology New ways of manipulating mammalian development are uncovering control mechanisms and enabling us to apply them in solving practical problems in animal production and human health This book outlines some of these new manipulations and how they have contributed to the present state of developmental biology Chapter 1 describes gene transfer by micro injection of cloned recombinant DNA into zygotes Although the factors that affect transformation frequencies and integration sites are still unknown such techniques offer a number of exciting prospects Research models for human disease could be artificially created and desirable characteristics in agricultural animals could be enhanced The theme of cell to cell transfer is continued in Chapters 2 and 3 Chapter 2 describes pronuclear transplantation by Sendai virus induced fusion of the karyoplast with the enucleated embryo Using this procedure it has been demonstrated that both male and female genomes are essential for normal development although the reason for this is not yet understood Chapter 3 describes studies on the fusion of whole oocytes **Specifications and Drawings of Patents Issued from the United States Patent Office** United States. was known about the way in which fibres break In this book about 20 different modes of fibre failure are examined Case studies have been selected both from the traditional uses of textiles in clothing and in household products such as sheets towels and carpets and also from the study of failure in textile structures used in industry and engineering for example seat belts and ropes This unique collection of more than 1500 scanning electron micrographs and other pictures for identifying failure modes together with the accompanying explanatory text provides fibre scientists polymer scientists and others working in textile research with a better understanding of fracture mechanisms The book will also be of interest to forensic scientists and medical specialists using fibre implants Finally it will help textile technologists and design engineers to manufacture improved textile products and to use them in ways which will maximise their life span **Songs and**
