McFadden, 1995-02-28 Summarizes research in the field and provides a historical context to social and personality development and developmental psychology emphasizing the role of emotions in personality formation and social behavior Assesses current theories and alternate models in areas such as attachment emotion expression and personality change Presents a function The ^AEmotions in Early Chinese Philosophy Curie Virág, 2017-02-13 In China the debate over the moral status of emotions began around the fourth century BCE when early philosophers first began to invoke psychological categories such as the mind xin human nature xing and emotions qing to explain the sources of ethical authority and the foundations of knowledge about the world Although some thinkers during this period proposed that human emotions and desires were temporary physiological disturbances in the mind caused by the impact of things in the world this was not the account that would eventually gain currency The consensus among those thinkers who would come to be recognized as the

foundational figures of the Confucian and Daoist philosophical traditions was that the emotions represented the underlying dispositional constitution of a person and that they embodied the patterned workings of the cosmos itself. Curie Virg sets out to explain why the emotions were such a central preoccupation among early thinkers situating the entire debate within developments in conceptions of the self, the cosmos and the political order. She shows that the mainstream account of emotions as patterned reality emerged as part of a major conceptual shift towards the recognition of natural reality as intelligible, orderly and coherent. The mainstream account of emotions helped to summon the very idea of the human being as a universal category and to establish the cognitive and practical agency of human beings. This book, the first intensive study of the subject, traces the genealogy of these early Chinese philosophical conceptions and examines their crucial role in the formation of ethical, political and cultural values in China.

Group Management of Stress-related Emotions in the Workplace Zdenka Šadl, Jerca Pavlič, Dana Mesner-Andolšek, 2023-05-25. This book spotlights the communities of coping that develop in everyday routines at work, like socialising, taking group breaks, telling stories and jokes, or drinking coffee and smoking together. Such practices help employees improve their well-being as they try to deal with the stress and emotions created by their demanding jobs. Effective solutions for how work groups can better manage work-related stress by building strong emotional cultures with a strong group mindset, trust and connection are described. The research points to communication patterns that encourage co-workers to openly discuss work problems, painful experiences and therefore better deal with stress. These communal practices nourish the camaraderie that sustains them and ensures the work is done. What is also highlighted is the way individuals become both involved in the system of power at play in the organisation by expressing, suppressing their stress, caused feelings and entangled in the struggles against this system.

Handling Emotions in Human-Computer Dialogues Johannes Pittermann, Angela Pittermann, Wolfgang Minker, 2009-10-28. In this book, a novel approach that combines speech-based emotion recognition with adaptive human-computer dialogue modeling is described. With the robust recognition of emotions from speech signals as their goal, the authors analyze the effectiveness of using a plain emotion recognizer, a speech emotion recognizer combining speech and emotion recognition, and multiple speech emotion recognizers at the same time. The semi-stochastic dialogue model employed relates user emotion management to the corresponding dialogue interaction history and allows the device to adapt itself to the context, including altering the stylistic realization of its speech. This comprehensive volume begins by introducing spoken language dialogue systems and providing an overview of human emotions, theories, categorization and emotional speech. It moves on to cover the adaptive semi-stochastic dialogue model and the basic concepts of speech emotion recognition. Finally, the authors show how speech emotion recognizers can be optimized and how an adaptive dialogue manager can be implemented. The book, with its novel methods to perform robust speech-based emotion recognition at low complexity, will be of interest to a variety of readers involved in human-computer interaction.
