Reptile Ecology and Conservation C. Kenneth Dodd Jr., 2016-05-05 This practical handbook of reptile field ecology and conservation brings together a distinguished international group of reptile researchers to provide a state of the art review of the many new and exciting techniques used to study reptiles The authors describe ecological sampling techniques and how they are implemented to monitor the conservation status and population trends of snakes lizards tuatara turtles and crocodilians throughout the world Emphasis is placed on the extent of statistical inference and the biases associated with different techniques and analyses The chapters focus on the application of field research and data analysis for achieving an understanding of reptile life history population dynamics movement patterns thermal ecology conservation status and the relationship between reptiles and their environment The book emphasises the need for thorough planning and demonstrates how a multi dimensional approach incorporates information related to morphology genetics molecular biology epidemiology statistical modelling animal welfare and biosecurity Although accentuating field sampling sections on experimental applications in laboratories and zoos thermal ecology genetics landscape ecology disease and biosecurity and management options are included Much of this information is scattered in the scientific literature or not readily available and the intention is to provide an affordable comprehensive synthesis for use by graduate students researchers and practising conservationists worldwide

Geoinformation Technologies for Geo-Cultural Landscapes: European Perspectives Andreas Vassilopoulos, Niki Evelpidou, Oliver Bender, Alenka Krek, 2008-12-04 The focal main objective of the book is to constitute a meaningful linkage among research problems geoinformation methods and corresponding applications The research goals related both to theoretical and practical issues derive from multidisciplinary fields such as archaeology history geography landscape planning environment geoinformation

Geography in America at the Dawn of the 21st Century Gary L. Gaile, Cort J. Willmott, 2005 Geography in America at the Dawn of the 21st Century surveys American geographers current research in their specialty areas and tracks trends and innovations in the many subfields of geography As such it is both a state of the discipline assessment and a topical reference It includes an introduction by the editors and 47 chapters each on a specific specialty The authors of each chapter were chosen by their specialty group of the American Association of Geographers AAG Based on a process of review and revision the chapters in this volume have become truly representative of the recent scholarship of American geographers While it focuses on work since 1990 it additionally includes related prior work and work by non American geographers The initial Geography in America was published in 1989 and has become a benchmark

reference of American geographical research during the 1980s This latest volume is completely new and features a preface written by the eminent geographer Gilbert White Tourism Research Methods Brent W. Ritchie, Peter M. Burns, Catherine A. Palmer, 2005-01-01 This book aims to move beyond the business social science debate by highlighting the diversity and richness of tourism research via case studies that cross the quantitative and qualitative divide A key feature of the book is the integration of theory with practice It considers a wide range of research issues approaches and techniques and includes contributions from both experienced and new researchers Geo-Design Steffen Nijhuis, Sisi Zlatanova, Eduardo Dias, Frank van der Hoeven, Stefan van der Spek, 2016-12-01 Geo Design Advances in bridging geo information technology and design bring together a wide variety of contributions from authors with backgrounds in urban planning landscape architecture education and geo information technology presenting the latest insights and applications of geo design Geo Design is here understood as a hybridization of the concepts Geo representing the modeling analytical and visualization capacities of GIS and Design representing spatial planning and design turning existing situations into preferred ones Through focusing on interdisciplinary design related concepts and applications of GIS international experts share their recent findings and provide clues for the further development of geo design This is important since there is still much to do Not only in the development of geo information technology but especially in bridging the gap with the design disciplines The uptake on using GIS is still remarkably slow among landscape architects urban designers and planners and when utilized it is often restricted to the basic tasks of mapmaking and data access Knowledge development and dissemination of applications of geodesign through research publications and education therefore remain key factors This publication draws upon the insights shared at the Geodesign Summit Europe held at Delft University of Technology in 2014 All contributions in the book are double blind reviewed by experts in the field The International Encyclopedia of Primatology, 3 Volume Set Agustín Fuentes, 2017-04-24 The International Encyclopedia of Primatology represents the first comprehensive encyclopedic reference focusing on the behaviour biology ecology evolution genetics and taxonomy of human and non human primates Represents the first comprehensive encyclopedic reference relating to primatology Features more than 450 entries covering topics ranging from the taxonomy history behaviour ecology captive management and diseases of primates to their use in research cognition conservation and representations in literature Includes coverage of the basic scientific concepts that underlie each topic along with the latest advances in the field Highly accessible to undergraduate and graduate students in primatology anthropology and the medical biological and zoological sciences Essential reference for academics researchers and commercial and conservation organizations This work is also available as an online resource at www.encyclopediaofprimatology.com The Least Cost Path From Landscape Genetics to Landscape Genomics Samuel A. Cushman, Andrew J. Shirk, Glenn T. Howe, Melanie A. Murphy, Rodney J. Dyer, Stéphane Joost, 2018-08-03 Ecosystems are the stage on which the play of evolution is acted and ecosystems are complex spatially structured and temporally varying The

purpose of this Research Topic is to explore critical challenges and opportunities for the transition from landscape genetics to landscape genomics. Landscape genetics has focused on the spatial analysis of small genetic datasets typically comprised of less than 20 microsatellite markers taken from clusters of individuals in putative populations or distributed individuals across landscapes. The recent emergence of large scale genomic datasets produced by next generation sequencing methods poses tremendous challenge and opportunity to the field. Perhaps the greatest is to produce process curate archive and analyze spatially referenced genomic datasets in a way such that research is led by a priori hypotheses regarding how environmental heterogeneity and temporal dynamics interact to affect gene flow and selection. The papers in the Research Topic cover a broad range of topics under this area of focus from reviews of the emergence of landscape genetics to best practices in spatial analysis of genetic data. The compilation like the emerging field itself is eclectic and illustrates the scope of both the challenges and opportunities of this emerging field.

Methods of Environmental Impact Assessment Peter Morris, Riki Therivel, 2001. Written by experts this text deals with how environmental impact assessment should be carried out for specific environmental components such as air and water.

Deep Learning for Earth Observation and Climate Monitoring Uzair Aslam Bhatti, Mir Muhammad Nizamani, Yong Wang, Hao Tang, 2025-03-19. Deep Learning for Earth Observation and Climate Monitoring bridges the gap between deep learning and the Earth sciences offering cutting edge techniques and applications that are transforming our understanding of the environment. With a focus on practical scenarios this book introduces readers to the fundamental concepts of deep learning from classification and image segmentation to anomaly detection and domain adaptability. The book includes practical discussion on regression parameter retrieval forecasting and interpolation among other topics. With a solid foundational theory, real world examples and example codes it provides a full understanding of how intelligent systems can be applied to enhance Earth observation and especially climate monitoring. This book allows readers to apply learning representations, unsupervised deep learning and physics aware models to Earth observation data enabling them to leverage the power of deep learning to fully utilize the wealth of environmental data from satellite technologies. Introduces deep learning for classification covering recent improvements in image segmentation and encoding priors, anomaly detection and target recognition and domain adaptability. Includes both learning representations and unsupervised deep learning covering deep learning picture fusion, regression parameter retrieval forecasting and interpolation from a practical standpoint. Provides a number of physics aware deep learning models including the code and the parameterization of models on a companion website as well as links to relevant data repositories allowing readers to test techniques themselves.

The Environment Chris C. Park, 2001. The second edition of this fully integrated introductory text for courses in environmental studies and physical geography builds on the resounding success of the first edition providing a comprehensive account of modern environmental issues and the physical and socio economic framework in which they are set. It explains the principles and applications of the different parts of the Earth's system: the lithosphere

atmosphere hydrosphere and the biosphere and explains the interrelationships within and between these systems It explores the present environmental crisis examines how the planet Earth fits into the wider universe and explores human environment interactions Environmental Information Management And Analysis W K Michener,J W Brunt,S G Stafford,1994-08-08

Most environmental studies are based upon data collected at fine spatial scales plots sediments cores etc Furthermore temporal scales of these studies have been relatively short days weeks months and few studies have exceeded three years duration the typical funding cycle Despite this history environmental scientists are now being called *Theories and Approaches of Environmental Economics* M.V. MacLeod,2013 This book provides a user friendly and practical introduction to the use of Geographic Information Systems GIS in marine biology Unlike most other books about using GIS this information is specifically presented in a marine biological context It is divided into three sections The first section provides just enough background information to allow you to get started with GIS without getting too bogged down in the theory behind it or making some of the most common mistakes made by beginners It covers areas such as what GIS is why GIS is useful in marine biology the basics of GIS common concepts and terms in GIS how data are contained in a GIS useful information about what to think about before starting a GIS project and how to break down and translate marine biological tasks into the language of GIS This information is provided in easy to read and non technical language with specific reference to its application in marine biology The second section which constitutes the main body of the book consists of a How To reference guide for carrying out specific tasks which marine biologists are likely to need to be able to do in their everyday research using ESRI s ArcGIS r 10 1 software This information is provided in easy to follow instruction sets which allow you to complete each task with the minimum of reference to other parts of the book As a result it is designed to be dipped into as and when needed by both novices and more experienced marine biological GIS users who need reminding of how to do specific things from time to time rather than to be read from start to finish The final section provides additional useful reference material including a guide to using extensions

in ArcGIS 10.1 software a guide to useful tools in ArcGIS 10.1 software a brief chapter on trouble shooting GIS projects and a glossary of common terms This is part of the PSLS series of books which use Task Oriented Learning TOL to teach the practical application of research skills to the life sciences This involves demonstrating how these skills can be used in the specific circumstances in which they are likely to be required rather than concentrating on teaching theoretical frameworks or on teaching skills in a generic or abstract manner By seeing how the similar processes are used to achieve a variety of different goals within a specific field it becomes easier for the reader to identify the general rules behind the practical application of these processes and therefore to transfer them to novel situations they may encounter in the future
