Advances in Modeling and Management of Urban Water Networks Alberto Campisano, Enrico Creaco, 2021-01-06 The Special Issue on Advances in Modeling and Management of Urban Water Networks UWNs explores four important topics of research in the context of UWNs asset management modeling of demand and hydraulics energy recovery and pipe burst identification and leakage reduction In the first topic the multi objective

optimization of interventions on the network is presented to find trade off solutions between costs and efficiency In the second topic methodologies are presented to simulate and predict demand and to simulate network behavior in emergency scenarios In the third topic a methodology is presented for the multi objective optimization of pump as turbine PAT installation sites in transmission mains In the fourth topic methodologies for pipe burst identification and leakage reduction are presented As for the urban drainage systems UDSs the two explored topics are asset management with a system upgrade to reduce flooding and modeling of flow and water quality with analyses on the transition from surface to pressurized flow impact of water use reduction on the operation of UDSs and sediment transport in pressurized pipes The Special Issue also includes one paper dealing with the hydraulic modeling of an urban river with a complex cross section *Index of USACERL Publications, October 1984 - December 1990* ,1991 SMART - IWRM - Sustainable Management of Available Water Resources with Innovative Technologies - Integrated Water Resources Management in the Lower Jordan Rift Valley : Final Report Phase II Klinger, Jochen, Goldscheider, Nico, Hoetzl, Heinz, 2015-10-01 **GIS and Geocomputation for Water Resource Science and Engineering** Barnali Dixon, Venkatesh Uddameri, 2015-11-25 GIS and Geocomputation for Water Resource Science and Engineering not only provides a comprehensive introduction to the fundamentals of geographic information systems but also demonstrates how GIS and mathematical models can be integrated to develop spatial decision support systems to support water resources planning management and engineering The book uses a hands on active learning approach to introduce fundamental concepts and numerous case studies are provided to reinforce learning and demonstrate practical aspects The benefits and challenges of using GIS in environmental and water resources fields are clearly tackled in this book demonstrating how these technologies can be used to harness increasingly available digital data to develop spatially oriented sustainable solutions In addition to providing a strong grounding on fundamentals the book also demonstrates how GIS can be combined with traditional physics based and statistical models as well as information theoretic tools like neural networks and fuzzy set theory **FDC Newsletter** ,1985 **Governing Integrated Water Resources Management** Oliver Fritsch, David Benson, 2020-01-23 Integrated Water Resources Management IWRM has become a global paradigm for the governance of surface coastal and groundwaters This Special Issue contains twelve articles related to the transfer of IWRM policy principles The articles explore three dimensions of transfer causes processes outcomes and offer a theoretically inspiring methodologically rich and geographically diverse engagement with IWRM policy transfer around the globe As such they can also productively inform a future research agenda on the dimensional aspects of IWRM governance Regarding the causes the contributions apply criticise extend or revise existing approaches to policy transfer in a water governance context asking why countries adopt IWRM principles and what mechanisms are in place to understand the adoption of these principles in regional or national contexts When it comes to processes articles in this Special Issue unpack the process of policy transfer and implementation and explore how IWRM principles travel across borders levels and scales

Finally this set of papers looks into the outcomes of IWRM policy transfer and asks what impact IWRM principles once implemented gave on domestic water governance water quality and water supply and how effective IWRM is at addressing critical water issues in specific countries
