Glass as a Waste Form and Vitrification Technology National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Steering Committee on Vitrification of Radioactive Wastes, 1997-03-02 **New Developments in Glassy Nuclear Wasteforms** Michael I. Ojovan, W. E. Lee, 2007 Based on the authors recent investigations this book describes the application of glassy and polyphase composite materials for nuclear waste immobilisation It introduces immobilisation issues beginning with a short description of nuclear waste types and compositions Sources of nuclear waste are described including the nuclear fuel cycle operational and spent nuclear fuel reprocessing waste streams The glassy waste forms currently being used for high intermediate and low level radioactive waste immobilisation are described Problems related to immobilisation capacity process efficiency and long term radionuclide retention are highlighted Scientific and technical problems in nuclear waste immobilisation are emphasised in particular long term waste form stability and durability Recent developments in advanced nuclear waste forms are described such as glass composite materials GCM with higher versatility and waste loading New immobilisation approaches and technologies are described including advanced cold crucible induction melting CCM self sustaining thermochemical immobilisation SSI and in situ self sintering in deep underground repositories Long term durability tests of nuclear waste glasses are outlined and the role of ion exchange phase in glass corrosion is described in detail The State of Development of Waste Forms for Mixed Wastes National Research Council, Division on Earth and Life Studies, Commission on Geosciences, Environment and Resources, Committee on Mixed Wastes, 1999-07-02 *Research Needs for High-Level Waste Stored in Tanks and Bins at U.S. Department of Energy Sites* National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Long-Term Research Needs for Radioactive High-Level Waste at Department of Energy Sites, 2001-10-05 The United States Department of Energy DOE has approximately 400 million liters 100 million gallons of liquid high level waste HLW stored in underground tanks and approximately 4 000 cubic meters of solid HLW stored in bins The current DOE estimate of the cost of converting these liquid and solid wastes into stable forms for shipment to a geological repository exceeds 50 billion to be spent over several decades DOE 2000 The Committee on Long Term Research Needs for Radioactive High Level Waste at Department of Energy Sites was appointed by the National Research Council NRC to advise the Environmental Management Science Program EMSP on a long term research agenda addressing the above problems related to HLW stored in tanks and bins at DOE sites **An Introduction to Nuclear Waste Immobilisation** Michael I. Ojovan, William E Lee, William E. Lee, 2010-07-07 Safety and environmental impact is of uppermost concern when dealing with the movement and storage of nuclear waste The 20 chapters in An Introduction to Nuclear Waste Immobilisation cover all important aspects of immobilisation from nuclear decay to regulations to new technologies and methods Significant focus is given to the analysis of the various matrices used in transport cement bitumen

and glass with the greatest attention being given to glass The last chapter concentrates on the performance assessment of each matrix and on new developments of ceramics and glass composite materials thermochemical methods and in situ metal matrix immobilisation The book thoroughly covers all issues surrounding nuclear waste from where to locate nuclear waste in the environment through nuclear waste generation and sources treatment schemes and technologies immobilisation technologies and waste forms disposal and long term behaviour Particular attention is paid to internationally approved and worldwide applied approaches and technologies Each chapter focuses on a different matrix used in nuclear waste immobilisation Cement bitumen glass and new materials Keeps the most important issues surrounding nuclear waste such as treatment schemes and technologies and disposal at the forefront

Hazardous and Radioactive Waste Treatment Technologies Handbook Chang H. Oh, 2001-06-27 With detailed photos and schematic system diagrams the Hazardous and Radioactive Waste Treatment Technologies Handbook provides the latest information on current technologies in the market Intended as a reference for scientists engineers and engineering students it covers waste related thermal and non thermal technologies separation techniques and stabilization technologies It provides an overview of recent waste technologies for both hazardous chemical wastes and radioactive wastes By implementing the techniques presented in this book readers will be able to decide which appropriate technology to use and how to design the equipment for their particular needs

Waste Treatment Anne E. Maczulak, 2009 Discusses how the waste treatment industry removes processes and disposes of human household and industrial wastes *Science and Technology for DOE Site Cleanup* National Research Council, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, 2010-03-05 The Department of Energy's Office of Environmental Management is developing a technology roadmap to guide planning and possible future congressional appropriations for its technology development programs It asked the National Research Council of the National Academies to provide technical and strategic advice to support the development and implementation of this roadmap specifically by undertaking a study that identifies principal science and technology gaps and their priorities for the cleanup program based on previous National Academies reports updated and extended to reflect current site conditions and EM priorities and input from key external groups such as the Nuclear Regulatory Commission Defense Nuclear Facilities Safety Board Environmental Protection Agency and state regulatory agencies In response this book provides a high level synthesis of principal science and technology gaps identified in previous NRC reports in part 1 Part 2 summarizes a workshop meant to bring together the key external groups to discuss current site conditions and science and technology needs

The Chemistry of the Actinide and Transactinide Elements (Set Vol.1-6) L.R. Morss, Norman M. Edelstein, Jean Fuger, 2010-10-21 The fourth edition of The Chemistry of the Actinide and Transactinide Elements comprises all chapters in volumes 1 through 5 of the third edition published in 2006 plus a new volume 6 To remain consistent with the plan of the first edition to provide a comprehensive and uniform treatment of the chemistry of the actinide and transactinide elements for both the nuclear technologist and the

inorganic and physical chemist and to be consistent with the maturity of the field the fourth edition is organized in three parts The first group of chapters follows the format of the first and second editions with chapters on individual elements or groups of elements that describe and interpret their chemical properties A chapter on the chemical properties of the transactinide elements follows The second group chapters 15 26 summarizes and correlates physical and chemical properties that are in general unique to the actinide elements because most of these elements contain partially filled shells of 5f electrons whether present as isolated atoms or ions as metals as compounds or as ions in solution The third group chapters 27 39 focuses on specialized topics that encompass contemporary fields related to actinides in the environment in the human body and in storage or wastes Two appendices at the end of volume 5 tabulate important nuclear properties of all actinide and transactinide isotopes Volume 6 Chapters 32 through 39 consists of new chapters that focus on actinide species in the environment actinide waste forms nuclear fuels analytical chemistry of plutonium actinide chalcogenide and hydrothermal synthesis of actinide compounds The subject and author indices and list of contributors encompass all six volumes

Improving the Scientific Basis for Managing DOE's Excess Nuclear Materials and Spent Nuclear Fuel National Research Council, Division on Earth and Life Studies, Board on Radioactive Waste Management, Committee on Improving the Scientific Basis for Managing Nuclear Materials and Spent Nuclear Fuel through the Environmental Management Science Program, 2003-06-09 The production of nuclear materials for the national defense was an intense nationwide effort that began with the Manhattan Project and continued throughout the Cold War Now many of these product materials by products and precursors such as irradiated nuclear fuels and targets have been declared as excess by the Department of Energy DOE Most of this excess inventory has been or will be turned over to DOE's Office of Environmental Management EM which is responsible for cleaning up the former production sites Recognizing the scientific and technical challenges facing EM Congress in 1995 established the EM Science Program EMSP to develop and fund directed long term research that could substantially enhance the knowledge base available for new cleanup technologies and decision making The EMSP has previously asked the National Academies National Research Council for advice for developing research agendas in subsurface contamination facility deactivation and decommissioning high level waste and mixed and transuranic waste For this study the committee was tasked to provide recommendations for a research agenda to improve the scientific basis for DOE's management of its high cost high volume or high risk excess nuclear materials and spent nuclear fuels To address its task the committee focused its attention on DOE's excess plutonium 239 spent nuclear fuels cesium 137 and strontium 90 capsules depleted uranium and higher actinide isotopes

The Office of Environmental Management Technical Reports, 1997 Independent Assessment of Science and Technology for the Department of Energy's Defense Environmental Cleanup Program National Academies of Sciences, Engineering, and Medicine, Division on Earth and Life Studies, Nuclear and Radiation Studies Board, Committee on Independent Assessment of Science and Technology for the

Department of Energy's Defense Environmental Cleanup Program, 2019-04-27 The National Defense Authorization Act for fiscal year 2017 contained a request for a National Academies of Sciences Engineering and Medicine review and assessment of science and technology development efforts within the Department of Energy's Office of Environmental Management DOE EM This technical report is the result of the review and presents findings and recommendations *Nuclear Corrosion Science and Engineering* Damien Feron, 2012-02-21 Corrosion of nuclear materials i.e. the interaction between these materials and their environments is a major issue for plant safety as well as for operation and economic competitiveness Understanding these corrosion mechanisms the systems and materials they affect and the methods to accurately measure their incidence is of critical importance to the nuclear industry Combining assessment techniques and analytical models into this understanding allows operators to predict the service life of corrosion affected nuclear plant materials and to apply the most appropriate maintenance and mitigation options to ensure safe long term operation This book critically reviews the fundamental corrosion mechanisms that affect nuclear power plants and facilities Initial sections introduce the complex field of nuclear corrosion science with detailed chapters on the different types of both aqueous and non aqueous corrosion mechanisms and the nuclear materials susceptible to attack from them This is complemented by reviews of monitoring and control methodologies as well as modelling and lifetime prediction approaches Given that corrosion is an applied science the final sections review corrosion issues across the range of current and next generation nuclear reactors and across such nuclear applications as fuel reprocessing facilities radioactive waste storage and geological disposal systems With its distinguished editor and international team of expert contributors Nuclear corrosion science and engineering is an invaluable reference for nuclear metallurgists materials scientists and engineers as well as nuclear facility operators regulators and consultants and researchers and academics in this field Comprehensively reviews the fundamental corrosion mechanisms that affect nuclear power plants and facilities Chapters assess different types of both aqueous and non aqueous corrosion mechanisms and the nuclear materials susceptible to attack from them Considers monitoring and control methodologies as well as modelling and lifetime prediction approaches Characterization Techniques of Glasses and Ceramics Jesus Ma. Rincon, Maximina Romero, 2013-06-29 This book covers a wide range of lectures given at the Short Summer Course celebrated at La Laguna University about the new trends in the modern characterization methods chemical microscopies thermal X ray resonance and nuclear methods for ceramics glasses and related materials This book also looks also at the zeolite thermal characterization methods as well as the new approaches in new microscopies for the investigation of surfaces in materials Nowadays is generally accepted in the scientific community that characterization methods must be used in research from a complementary point of view The conscious application of several characterization techniques in the same material is very useful not only for obtaining a best knowledge of the material characteristics but also to answer scientific and technical questions about the processing and properties of final products Whereas the introducing chapter in chemical

analysis of rare earths the several methods here described looked as complementary methods which can be used in the investigation of ceramics and glasses The major part of the book is devoted to fundamentals and applications of the techniques with a direct style which makes the book easy to read being particularly useful for anyone beginning in research and applications of ceramics glasses and glass ceramics Each chapter include clear figures and additional references for those interested in obtaining a depth knowledge in different techniques

Uhlig's Corrosion Handbook R. Winston Revie, 2011-04-12 This book serves as a reference for engineers scientists and students concerned with the use of materials in applications where reliability and resistance to corrosion are important It updates the coverage of its predecessor including coverage of corrosion rates of steel in major river systems and atmospheric corrosion rates the corrosion behavior of materials such as weathering steels and newer stainless alloys and the corrosion behavior and engineering approaches to corrosion control for nonmetallic materials New chapters include high temperature oxidation of metals and alloys nanomaterials and dental materials anodic protection Also featured are chapters dealing with standards for corrosion testing microbiological corrosion and electrochemical noise

Municipal Solid Waste Management Christian Ludwig, Stefanie Hellweg, Samuel Stucki, 2012-12-06 Motivation The other day I was waiting at the station for my train Next to me a young lady was nonchalantly leaning against the wall Suddenly she took a cigarette pack out of her handbag pulled out the last cigarette put it between her lips crushed the empty pack threw it on the ground and hedonistically lit the cigarette I thought to myself What a behavior The nearest trashcan was just five meters away So I bent down took the crushed pack and gave it back to her saying that she had lost it She looked at me in a rather deranged way but she said nothing and of waste to the trashcan brought the piece Often people are not aware of the waste they produce They get rid of it and that's it As soon as the charming lady dropped the cigarette pack the problem was solved for her The pack was on the ground and it suddenly no longer belonged to her It is taken for granted that somebody else will do the cleaning up There is a saying that nature does not produce waste For long as humans obtained the goods they needed from the ground where they lived the waste that was produced could be handled by nature This has drastically changed due to urbanization and waste produced by human activities has become a severe burden

Chemically Bonded Phosphate Ceramics Arun S. Wagh, 2004-11-19 The first chemically bonded phosphate ceramics zinc phosphate dental cements were developed over a century ago However it has only been in the last 30 years that a new breed of materials has been discovered Chemically Bonded Phosphate Ceramics brings together latest developments in this field including several novel ceramics from Argonne and Brookhaven National Laboratories Coupled with further advances in their use as biomaterials these materials have found uses in diverse fields in recent years Applications range from advanced structural materials to oil well cements and stabilization and encapsulation of hazardous and radioactive waste Such developments call a single source

for their science and applications This book provides the first comprehensive account to fulfil this need Provides a foundation into the latest developments in chemically bonded phosphate ceramics Explores new CBPC s with a wide range of practical applications Over 30 years worth of developments and applications in the field available in a single source **Phosphates** Matthew J. Kohn, John Rakovan, John M. Hughes, 2018-12-17 Volume 48 of Reviews in Mineralogy and Geochemistry represents the work of many authors whose research illustrates how the unique chemical and physical behavior of phosphate minerals permits a wide range of applications that encompasses phosphate mineralogy petrology biomineralization geochronology and materials science While diverse these fields are all linked structurally crystal chemically and geochemically As geoscientists turn their attention to the intersection of the biological geological and material science realms there is no group of compounds more germane than the phosphates **Scientific Basis for Nuclear Waste Management XXIX** Pierre Van Iseghem, 2006
