Becker-Shaffer's Diagnosis and Therapy of the Glaucomas Robert L. Stamper, Marc F. Lieberman, Michael V. Drake, Bernard Becker, 2009-01-01. Authored by three prominent specialists in the field, this text provides comprehensive coverage of diagnostic and treatment modalities for optimal glaucoma management. Revised throughout, this new edition presents the latest guidance in clinical examination, randomized trials, medical treatment, laser therapy, and surgical procedures. Hundreds of illustrations, with many classic black and white figures from the previous editions supplemented with new color images, depict the features of glaucomas and step-by-step procedures for their management. While expanded use of highlighted boxes, lists, and summary tables make the material easy to access, evidence-based and updated information on all aspects of the glaucomas, including physiology, genetics, interventional trials, and new surgical techniques, offer a well-rounded foundation of knowledge for making the most informed diagnoses and choosing the most effective course of treatment. Combines the cumulative experience of three prominent glaucoma specialists addressing a full range of clinical needs for practitioners of all levels for a uniquely written, coherent perspective. Includes extensive references to current and historically important sources to provide comprehensive interpretation of the latest medical literature. Synthesizes a classical approach to the glaucomas based on seven earlier editions spanning over 40 years with the most up-to-date evidence-based and epidemiologically derived classifications and outcomes. Coherently correlates with authoritative consensus documents on key areas of glaucoma drawn up by the world-wide specialists of the World Glaucoma Association and reprinted in the text. Revamps traditional teachings on the angle closure glaucomas in concert with the newest international literature and technologies to keep you up to date on the latest advances. Illustrates detailed surgical interventions applicable to the complete spectrum of clinical settings from the developing world through contemporary operating rooms. Examines the newest and most promising developments in pharmacology, laser, and surgical advances for glaucoma management to enable you to choose the most effective patient approach. Illustrates invaluable but little-known instruments for clinical and research diagnoses, including optic nerve cupping scales, bleb assessment instruments, and more.

Basic and Clinical Perspectives in Vision Research Jon G. Robbins, M.B. Djamgoz, Anthony Taylor, 2013-06-29. I have been asked to write a brief foreword to this volume honoring Hisako Ikeda, providing a review of the accomplishments in our field over the past four decades when Hisako was an active participant. This I am delighted to do. It has been a most exciting time in vision research, and Hisako has been right in the middle of much of the excitement, publishing on a wide variety of topics and providing much new data and many new insights. Hisako's research career can be divided by decades into four quite distinct areas of inquiry. In the 1950s, as a student in Japan, her research interests were psychophysical in nature, and she was concerned with visual illusions, figural aftereffects, and motion detection. In the 1960s, after her move to London, she

began electrophysiological studies Much of her work in the 1960s was concerned with the electroretinogram ERG its components and the use of this electrical response for evaluating spectral sensitivities of the eye and retinal degenerations This work represented the beginning of her electrodiagnostic clinical work which continued until her retirement

Ophthalmology Myron Yanoff, Jay S. Duker, 2009-01-01 Based on feedback the authors have streamlined their bestselling reference to zero in on just the clinical answers ophthalmologists need in day to day practice This new edition presents unparalleled guidance on nearly every ophthalmic condition and procedure *Vision* David T. W. Yew, Kwok Fai So, D. S. C. Tsang, 1988 This volume consists of invited papers from scientists of Chinese origin in the visual field from around the world The papers cover all basic and applied aspects of the vertebrate and invertebrate visual systems from photoreceptors to cortical neurons presenting both review and new findings on the subjects It is hoped that this book will serve as a guide to international research linkage between groups
