Global Change And Mountain Regions:

Global Change and Mountain Regions Uli M. Huber, Harald K.M. Bugmann, Mel A. Reasoner, 2006-03-09 Mountain regions occupy about a quarter of the global terrestrial land surface and provide goods and services to more than half the humanity Global environmental change threatens the integrity of these systems and their ability to provide the goods and services upon which humanity has come to depend This book gives an overview of the state of research in fields pertaining to the detection understanding and prediction of global change impacts in mountain regions More than 60 contributions from paleoclimatology cryospheric research hydrology ecology and development studies are compiled in this volume each with an outlook on future research directions

Global Change and Protected Areas Guido Visconti, Martin Beniston, Emilio D. Iannorelli, Diego Barba, 2006-04-11 High mountains can be considered as particularly appropriate environments to detect effects of climate change on natural biocoenoses in a global scale for the following reasons Firstly ecosystems at the temperature limits of plant life are generally thought to be especially sensitive to climate change 1 2 3 An already ongoing upward shift of vascular plants at high summits in the Alps determined by the Austrian IGBP research 4 5 6 7 8 is most likely a response to the atmospheric warming since the 19th century Secondly high mountains still comprise the most natural ecosystems in many countries being largely untouched by human settlements and agricultural influences Therefore climatic effects on ecosystems can be studied without masking effects from human land use Thirdly high mountain ranges are present in virtually every major zoobiome of the earth The research initiative GLORIA aims to establish an urgently needed global monitoring network by using high mountain ecosystems as sensitive indicators as required in the IGBP Mountain Workplan 9 Moreover a deeper understanding of assemblage mechanisms and assemblage processes in vegetation patterns as a contribution to ecological theory can be expected This paper gives a short general overview about GLORIA and a first outline about the concept method and some few results of the Multi Summit Approach one of the basic intentions within the proposed network It aims to encourage the involvement of high mountain researchers and research coordinators in a detailed discussion of the proposed research activities and in a co operation within the planned global monitoring network

Mountains: Witnesses of Global Changes Renato Baudo, Gianni Tartari, Elisa Vuillermoz, 2007-08-02 From an environmental point of view mountains are particularly sensitive and important for monitoring the state of health of our planet Only through distribution of meteoroclimatic and atmospheric composition monitoring points in mountain regions coupled with modelling simulations will we be able to thoroughly analyze complex pollutant transport mechanisms and better understand imminent global changes The Himalayan Karakoram range For its elevation and geographic location represents one of the ideal places for studying long range pollutant transport systems on a regional scale and for monitoring changes index by mechanisms that act on global scale through monsoon circulation The Ev K2 CNR committee with this book reached its objective of creating a unique opportunity for dialogue between major environmental scientists and experts highlighting

the close relationship between diverse themes with a common underlying thread in depth comprehension of the environmental phenomena which are determining the health of our planet

Tourism and Global Environmental Change Stefan Gössling, Michael C. Hall, 2006-06-07 This fascinating book is the first comprehensive analysis of the economic social and political interrelationships between tourism and global environmental change one of the most significant issues facing humankind today Its contributors argue that the impacts of these changes are potentially extremely serious both for the tourism industry and for the communities dependent upon it Integrating knowledge from the social and physical sciences this significant book explores the key issues surrounding global environmental change as well as government and industry willingness to meet the challenges posed by it Divided into four main sections it investigates the tourism and global environmental change relationship in specific environments global issues related to environmental change differing perceptions of global environmental change held by tourists and the tourist industry Comprehensive in scope topical and integrative this key text is essential reading for students scholars and researchers in all aspects of tourism geography and environmental studies

Impact of Global Changes on Mountains Velma I. Grover, Axel Borsdorf, Jürgen Breuste, Prakash Chandra Tiwari, Flavia Witkowski Frangetto, 2014-12-19 Mountain regions encompass nearly 24 percent of the total land surface of the earth and are home to approximately 12 percent of the world's population Their ecosystems play a critical role in sustaining human life both in the highlands and the lowlands During recent years resource use in high mountain areas has changed mainly in response to the

Challenges for Mountain Regions Axel Borsdorf, 2010 Mountains make up around a third of the surface area of the world's mainland and islands While they are home to one tenth of the world's population they provide resources to more than a third of all humans Mountain areas are hotspots of biodiversity as well as offering recreation or even recuperation after an illness for many people There is cause for concern as global change in the form of climate change and as globalization threatens mountain areas more intensely than lowlands Global warming in the mountains occurs up to three times faster than elsewhere and has highly diverse effects Globalization is hitting ill prepared traditional areas that are hard pressed to hold their own against global competition Mountain ranges often run across national boundaries and possess conflict potential At international level and with diminishing resources these conflicts can arise around minerals and water At national level the inaccessibility of some mountain areas makes them a potential shelter for terrorists For these reasons mountain research is now becoming all the more important The aim must be to maintain the functions of mountains and to introduce sustainable development processes The UN has recognized this by passing the resolution Sustainable Mountain Development It adds to the mountain chapter of the Agenda 21 and to the declaration of an International Year of the Mountains in 2002 and 2010 This volume shows that Austrian mountain research is taking up the challenge of global change for mountain regions The authors are or have been members of the Institute of Mountain Research Man and Environment at the Austrian Academy of Sciences or are working closely with the institute

Readers who love the mountains will find here a new more problem oriented view of these fascinating landscapes

Climate of the Romanian Carpathians Dana Magdalena Micu,Alexandru Dumitrescu,Sorin Cheval,Marius-Victor Birsan,2014-10-27 This book is a comprehensive climatic monograph which addresses one of the most complex mountain environments in Europe the Carpathians Chain focusing on the branches that lie over Romania The volume aggregates high quality input data state of the art techniques regional analysis and overview perspectives while addressing the spatial and temporal patterns of the main climatic elements The study covers the period 1961 2010 for the present climate while the perspective is extended up to 2050 The main climatic elements e g air temperature precipitation wind are analyzed but some specific variables like snow depth and snow cover are also examined both in terms of average behaviour and extreme characteristics This is the first synthesis addressing the climate of this mountain region and it provides useful information for scientists mountain stakeholders decision makers and general public Mountain ecosystem services and climate change

The Oxford Companion to Global Change David J. Cuff,2008 In recent years global change has become increasingly important in technological ecological and political spheres This companion examines the environmental events of recent times and investigates long term trends as well as broader issues of global change **Climate Change 2022 - Impacts, Adaptation and Vulnerability** Intergovernmental Panel on Climate Change (IPCC),2023-06-22 The Working Group II contribution to the Sixth Assessment Report of the Intergovernmental Panel on Climate Change IPCC provides a comprehensive assessment of the scientific literature relevant to climate change impacts adaptation and vulnerability The report recognizes the interactions of climate ecosystems and biodiversity and human societies and integrates across the natural ecological social and economic sciences It emphasizes how efforts in adaptation and in reducing greenhouse gas emissions can come together in a process called climate resilient development which enables a liveable future for biodiversity and humankind The IPCC is the leading body for assessing climate change science IPCC reports are produced in comprehensive objective and transparent ways ensuring they reflect the full range of views in the scientific literature Novel elements include focused topical assessments and an atlas presenting observed climate change impacts and future risks from global to regional scales Available as Open Access on Cambridge Core Safeguarding Mountain Social-Ecological Systems, vol. 1 Stefan Schneiderbauer,Paola Fontanella Pisa,John F. Shroder,Jorg Szarzynski,2023-12-01 Safeguarding Mountain Ecosystems A Global Challenge provides an overview of the relevant research in mountain regions worldwide identifying existing challenges and providing an understanding of the diversity of mountain ecosystems in different regions Mountain ecosystems are increasingly vulnerable to modified climate conditions and other global changes demographic migration urbanization In this time of change efforts for sustainable development in mountain ecosystems deserve all the attention especially in synergy with the United Nations International Frameworks including the Sustainable Development Agenda 2030

the Sendai Framework for Disaster Risk Reduction the Paris Agreement and the New Urban Agenda Sections underline the importance of mountain regions for humanity at global regional and local scales describe the challenges of safeguarding mountains and possible solutions worldwide and scrutinize regional specificities of the major mountain ranges describing the challenges and opportunities of each Final sections reflect on applications and technologies that address and solve major problems Focuses on existing challenges for mountain regions around the world Presents specific case studies of mountain ecosystems from major mountain ranges Features contributions from representatives of UN Agencies and research experts from the addressed regions offering a very interdisciplinary view on challenges and opportunities *Climate Change* Juan A. Blanco, Houshang Kheradmand, 2011-09-12 This book offers an interdisciplinary view of the biophysical issues related to climate change Climate change is a phenomenon by which the long term averages of weather events i.e. temperature precipitation wind speed etc. that define the climate of a region are not constant but change over time There have been a series of past periods of climatic change registered in historical or paleoecological records In the first section of this book a series of state of the art research projects explore the biophysical causes for climate change and the techniques currently being used and developed for its detection in several regions of the world The second section of the book explores the effects that have been reported already on the flora and fauna in different ecosystems around the globe Among them the ecosystems and landscapes in arctic and alpine regions are expected to be among the most affected by the change in climate as they will suffer the more intense changes The final section of this book explores in detail those issues Mountain Landscapes in Transition Udo Schickhoff, R.B. Singh, Suraj Mal, 2021-11-02 This book compiles available knowledge of the response of mountain ecosystems to recent climate and land use change and intends to bridge the gap between science policy and the community concerned The chapters present key concepts major drivers and key processes of mountain response providing transdisciplinary orientation to mountain studies incorporating experiences of academics community leaders and policy makers from developed and less developed countries The book chapters are arranged in two sections The first section concerns the response processes of mountain environments to climate change This section addresses climate change itself past current and future changes of temperature and precipitation and its impacts on the cryosphere hydrosphere biosphere and human environment systems The second section focuses on the response processes of mountain environments to land use land cover change The case studies address effects of changing agriculture and pastoralism forest water resources management and urbanization processes landscape management and biodiversity conservation The book is designed as an interdisciplinary publication which critically evaluates developments in mountains of the world with contributions from both social and natural sciences *Mountain Geography* Martin F. Price, 2013-08-24 Mountain Geography is a comprehensive resource that gives readers an in depth understanding of the geographical processes that occur in the world's mountains and the impact of these regions on culture and society The volume begins with an introduction that defines mountains followed by

a comprehensive treatment of their physical geography including origins climatology snow and ice landforms and geomorphic processes soils vegetation and wildlife The concluding chapters discuss the human geography of mountains and our attitudes toward them populations in the mountain regions and their livelihoods and interactions within dynamic environments the diversity of mountain agriculture and the challenges of sustainable mountain development Book Jacket
