Global Bioethics Henk ten Have, 2016-02-10 The panorama of bioethical problems is different today Patients travel to Thailand for fast surgery commercial surrogate mothers in India deliver babies to parents in rich countries organs body parts and tissues are trafficked from East to Western Europe physicians and nurses migrating from Africa to the U S thousands of children or patients with malaria tuberculosis and AIDS are dying each day because they cannot afford effective drugs that are too expensive Mainstream bioethics as it has developed during the last 50 years in Western countries is evolving into a broader approach that is relevant for people across the world and is focused on new global problems This book provides an introduction into the new field of global bioethics Addressing these problems requires a broader vision of bioethics that not only goes beyond the current emphasis on individual autonomy but that criticizes the social economic and political context that is producing the problems at global level This book argues that global bioethics is a necessity because the social economic and environmental effects of globalization require critical responses Global bioethics is not a finished product that

can simply be applied to solve global problems but it is the ongoing result of interaction and exchange between local practices and global discourse. It combines recognition of differences and respect for cultural diversity with convergence towards common perspectives and shared values. The book examines the nature of global problems as well as the type of responses that are needed in order to exemplify the substance of global bioethics. It discusses the ethical frameworks that are available for global discourse and shows how these are transformed into global governance mechanisms and practices.

Have, 2018-06-14. This book presents and elaborates on how the teaching of global ethics in healthcare contributes to furthering ideals of cosmopolitanism solidarity equality respect for differences and concern with what human beings and specifically patients have in common regardless of where they live and who they are. Global problems such as pandemic diseases disasters lack of care and medication homelessness and displacement call for global responses. The new area of global bioethics is providing answers by arguing that ethical discourse should first of all criticize the structures of violence and injustice that underlie many threats to global health. Education of health professionals should articulate that they are citizens of the world like their patients. This book first demonstrates that a moral vision of global education is necessary to gain a global dimension. It is argued that a global framework of ethical principles is available the challenge is to elaborate and specify that framework into specific educational approaches and models. The book subsequently analyzes goals and challenges of global education in biomedicine and healthcare. It is shown how such challenges e.g. inequities and cultural differences can be overcome. Finally the book presents concrete examples cases methods and practices of global education in bioethics. The unique feature of the book is that it addresses global education challenges specifically in the area of healthcare medicine and medical science. It combines two areas of research and experience that are usually not connected global bioethics and global education. This book is written for all those involved in global ethics teaching in medicine nursing ethics philosophy law and theology courses.
