## **Global Change And Local Places:**

**Global Change and Local Places** Association of American Geographers GCLP Research Team, 2003-06-26 This comprehensive book explores the ways people and biota contribute to climate change in four localities of the United States. This volume summarizes the findings of the Global Change in Local Places GCLP project initiated by the Association of American Geographers to investigate the contribution of local factors to global change, how and why these factors change over time, and how the effects might be controlled and mitigated locally. The sources and driving forces for greenhouse gas emissions vary widely among the four research sites, as do the possibilities and propensities to mitigate emissions and adapt to the local changes. Global warming could bring. Policy makers and legislators will be unable to address human induced climate change effectively without the insights revealed by examining and understanding the daily routines that are simultaneously the sources of climate change and the keys to reducing its severity and coping with its effects. **Global Cities and Climate Change** Taedong Lee, 2014-08-21 Cities have led the way to combat climate change by planning and implementing climate mitigation and adaptation policies. These local efforts go beyond national boundaries. Cities are forming transnational networks to enhance their understandings and practices for climate policies. In contrast to national governments that have numerous obstacles to cope with global climate change, in the international and national level, cities have become significant international actors in the field of international relations and environmental governance. *Global Cities and Climate Change* examines the translocal relations of cities that have made an international effort to collectively tackle climate change. Compared to state-centric terms, international or transnational relations, translocal relations look at policies, politics, and interactions of local governments in the globalized world. Using multi-methods such as multi-level analysis, comparative case studies, regression analysis, and network analysis, Taedong Lee illustrates why some cities participated in transnational climate networks, for cities under what conditions cities internationally cooperate with other cities, with which cities, and which factors influence climate policy performance. An essential read to all those who wish to understand the driving factors for local governments' engagement in global climate governance from a theoretical as well as practical point of view, Lee makes a valuable contribution to the fields of international relations, environmental policies, and urban studies. 21st Century Geography: A Reference Handbook Joseph P.
