Global Change And Terrestrial Ecosystems

Global Change And Terrestrial Ecosystems:

Global Change and Terrestrial Ecosystems Brian Harrison Walker, Will Steffen, 1996-11-13 This major new book presents a collection of essays by leading authorities who address the current state of knowledge. The chapters bring together the early results of an international scientific research program designed to address what will happen to our ability to produce food and fiber and what effects there will be on biological diversity under rapid environmental change. This book addresses how these changes to terrestrial ecosystems will feed back to further environmental change. International in scope, this state-of-the-art assessment will interest policymakers, students, and scientists interested in global change, climate change, and biodiversity. Special features include descriptions of a dynamic global vegetation model, developing generic crop models, and a special section on the emerging discipline of global ecology.

Climate Change and Terrestrial Ecosystem Modeling Gordon Bonan, 2019-02-21 Climate models have evolved into Earth system models with representation of the physics, chemistry, and biology of terrestrial ecosystems. This companion book to Gordon Bonan's *Ecological Climatology: Concepts and Applications*, Third Edition, builds on the concepts introduced there and provides the mathematical foundation upon which to develop and understand ecosystem models and their relevance for these Earth system models. The book bridges the disciplinary gap among land surface models developed by atmospheric scientists, biogeochemical models, dynamic global vegetation models, and ecosystem demography models developed by ecologists, and ecohydrology models developed by hydrologists. Review questions, supplemental code, and modeling projects are provided to aid with understanding how the equations are used. The book is an invaluable guide to climate change and terrestrial ecosystem modeling for graduate students and researchers in climate change, climatology, ecology, hydrology, biogeochemistry, meteorology, environmental science, mathematical modeling, and environmental biophysics.

The Terrestrial Biosphere and Global Change Brian Walker, 1999-03-25 Summarises understanding of global change interactions with terrestrial ecosystems.

Global Change and Arctic Terrestrial Ecosystems Walter C. Oechel, Terry Callaghan, Tagir Gilmanov, 1996-12-13

Terrestrial Ecosystems in a Changing World Josep G. Canadell, Diane E. Pataki, Louis F. Pitelka, 2007-01-10 Over 100 authors present 25 contributions on the impacts of global change on terrestrial ecosystems, including key processes of the earth system such as the CO₂ fertilization effect, shifts in disturbances and biome distribution, the saturation of the terrestrial carbon sink, and changes in functional biodiversity. Ecosystem services such as the production of wheat, pest control, and carbon storage in croplands and sensitive regions in the world threatened by rapid changes in climate and land use, such as high latitudes ecosystems, tropical forest in Southeast Asia, and ecosystems dominated by monsoon climate. The book also explores new research developments on spatial thresholds and nonlinearities, the key role of urban development in global biogeochemical processes, and the integration of natural and social sciences to address complex problems of the human environment system.

Global Change and the Terrestrial Biosphere H. H. Shugart, F. I. Woodward, 2011-06-13 Global climate change challenges ecologists to

synthesize what we know to solve a problem with deep historical roots in our discipline In ecology the question How do terrestrial ecosystems interact with the other earth systems to produce planetary change has sufficient depth to be the focal challenge This central question is sharpened further as the changes that we may be manifesting upon our planet's systems of land sea air and ice can have potential consequences for the future of human civilization This book provides the depth of the history of global ecology and reviews the breadth of the ideas being studied today Each chapter starts with a brief narrative about a scientist whose work traces forward into today's issues in global ecosystems The discussions are framed in a growing realization that we may be altering the way our planet functions almost before we have gained the necessary knowledge of how it works at all

The Impact of Climate Change on Ecosystems and Species John Pernetta,1995 This series presents the results of an investigation by IUCN's Global Change Programme into the possible implications of predicted global change for natural systems and their management This publication examines issues specific to terrestrial ecosystems

Global Change and Arctic Terrestrial Ecosystems Walter C. Oechel,Terry Callaghan,Tagir Gilmanov,Jarle I. Holten,Barrie Maxwell,Ulf Molau,Bjartmar Sveinbjörnsson,2012-12-06 Global warming is likely to have the greatest impact at high latitudes making the Arctic an important region both for detecting global climate change and for studying its effects on terrestrial ecosystems The chapters in this volume address current and anticipated impacts of global climate change on Arctic organisms populations ecosystem structure and function biological diversity and the atmosphere

Global Change and Terrestrial Ecosystems in Monsoon Asia T. Hirose,B.H. Walker,2012-12-06 Forest vegetation is distributed in monsoon Asia continuously from boreal forests through temperate to tropical rain forests This vegetation the richest in the world is being subjected to global change on an unprecedented scale It has been predicted that boreal forests will experience the most significant change in response to global warming while tropical forests are endangered by rapid changes in land use due to high population pressure An increase in atmospheric CO₂ concentration will severely affect ecosystem function in this area This volume presents a review of terrestrial ecosystems in monsoon Asia and assesses possible effects of global change on the structure and function of forest ecosystems and feedback routes to the global carbon cycle Audience Vital reading for plant ecologists vegetation scientists environmental managers and government decision makers
