Global Change And The Korean Peninsula:

Global Change and the Korean Peninsula Chang Hee Lee,1993 Climate change, agriculture, and adaptation in the Republic of Korea to 2050 Cenacchi, Nicola,Lin, Youngaha,Sulser, Timothy B.,Islam, Shahnila,Mason-D'Croz, Daniel,Kim, Chang-Gil,Wiebe, Keith D.,2016-12-16 As the effects of climate change set in and population and income growth exert increasing pressure on natural resources food security is becoming a pressing challenge for countries worldwide Awareness of these threats is critical to transforming concern into long term planning and modeling tools like the one used in the present study are beneficial for strategic support of decision making in the agricultural policy arena The focus of this investigation is the Republic of Korea where economic growth has resulted in large shifts in diet in recent decades in parallel with a decline in both arable land and agricultural production and a tripling of agricultural imports compared to the early 2000s Although these are recognized as traits of a rapidly growing economy officials and experts in the country recognize that the trends expose the Republic of Korea to climate change shocks and fluctuations in the global food market This study uses the IMPACT International Model for Policy Analysis of Agricultural Commodities and Trade economic model to investigate possible future trends of both domestic food production and dependence on food imports as well as the effects from adoption of agricultural practices consistent with a climate change adaptation strategy The goal is to help assess the prospects for sustaining improvements in food security and possibly inform the national debate on agricultural policy Results show that historical trends of harvested area and imports may continue into the future under climate change Although crop models suggest negative long term impacts of climate change on rice yield in the Republic of Korea the economic model simulations show that intrinsic productivity growth and market effects have the potential to limit the magnitude of losses rice production and yield are projected to keep growing between 2010 and 2050 with a larger boost when adoption of improved technologies is taken into consideration At the same time food production and net exports from the country s major trading partners are also projected to increase although diminished by climate change effects In sum these results show that kilocalorie availability will keep growing in the Republic of Korea and although climate change may have some impact by reducing the overall availability the effect does not appear strong enough to have significant consequences on projected trends of increasing food security *Advances in Climate Change and Global Warming Research and Application: 2012 Edition* ,2012-12-26 *Advances in Climate Change and Global Warming Research and Application 2012 Edition* is a ScholarlyEditions eBook that delivers timely authoritative and comprehensive information about Climate Change and Global Warming The editors have built *Advances in Climate Change and Global Warming Research and Application 2012 Edition* on the vast information databases of ScholarlyNews You can expect the information about Climate Change and Global Warming in this eBook to be deeper than what you can access anywhere else as well as consistently reliable authoritative informed and relevant The content of *Advances in Climate Change and Global Warming Research and Application 2012 Edition* has been

The Future of the Korean Peninsula Mason Richey, Jagannath P. Panda, David A. Tizzard, 2021-07-28. This book considers both Korea's North Korea and South Korea to examine possible pathways for the years leading up to 2032 and beyond, thus offering a composite picture of Korea and its strategic relevance in Asia and the world at large. Through a combined South-North Olympic team and an effort of jointly hosting the Games, Republic of Korea President Moon Jae-in has marked the year 2032 as special in the future of the Korean Peninsula. Although the International Olympic Committee (IOC) has expressed scepticism about a combined hosting of the Games, the expectation in Korea is that this event will underline the shared destiny of the people inhabiting the peninsula and realign two states still caught in an ideologically fraught civil conflict that is one of the last vestiges of the Cold War. Chapters begin with a brief historical review and analysis of the present before moving to consider how these will shape the next decade, drawing comparative and complementary analyses. No matter how contrasting the contemporary trajectories of both North and South Korea might appear, Korea as a singular entity is an old concept still containing great possibilities. As the ongoing inter-Korean reconciliation process underscores the futures of North and South Korea can be found in a complementary singular Korea which would again represent an important political, strategic, cultural, and social space in Asia. An evaluation of the future trajectory, social awareness, and perception of the Koreas, this book offers a valuable contribution to the study of North and South Korea and Asian Politics.

The Drought Risk Analysis, Forecasting, and Assessment under Climate Change Tae-Woong Kim, 2021-01-06. This Special Issue is a platform to fill the gaps in drought risk analysis with field experience and expertise. It covers: 1) robust index development for effective drought monitoring; 2) risk analysis framework development and early warning systems; 3) impact investigations on hydrological and agricultural sectors; 4) environmental change impact analyses. The articles in the Special Issue cover a wide geographic range across China, Taiwan, Korea, and the Indo-China peninsula, which covers many contrasting climate conditions. Hence, the results have global implications; the data analysis, modeling methodologies, and conclusions lay a solid foundation for enhancing our scientific knowledge of drought mechanisms and relationships to various environmental conditions.

Climate Change Juan A. Blanco, Houshang Kheradmand, 2011-09-12. This book offers an interdisciplinary view of the biophysical issues related to climate change. Climate change is a phenomenon by which the long-term averages of weather events, i.e., temperature, precipitation, wind speed, etc., that define the climate of a region are not constant but change over time. There have been a series of past periods of climatic change registered in historical or paleoecological records. In the first section of this book, a series of state-of-the-art research projects explore the biophysical causes for climate change and the techniques currently being used and

developed for its detection in several regions of the world The second section of the book explores the effects that have been reported already on the flora and fauna in different ecosystems around the globe Among them the ecosystems and landscapes in arctic and alpine regions are expected to be among the most affected by the change in climate as they will suffer the more intense changes The final section of this book explores in detail those issues *Encyclopedia of Global Warming and Climate Change* S. Climate Change Adaptation in River Management Yi hyun Kang, 2022-10-14 This book examines the approaches to climate change adaptation in water governance taken by South Korea and Germany By comparing their political decision making processes this book explores the factors behind their differences Adaptation to the changing climate is critical to human society and water is the principal medium through which climate change will affect us Due to high levels of industrialization and population density flood control is a high priority in both countries adaptation plans While South Korea has maintained its engineering oriented flood control policy for river management Germany has turned its direction from its long standing technical approach to more nature based solutions The evidence of this study indicates that policy change and stability is the result of discourse and institutional interaction and thus emphasizes the validity of discursive institutionalism This book will clearly explain why certain policies are adopted for water management and will be an invaluable contribution to the expanding literature on the socio political aspects of climate change adaptation

Climate Change and Cultural Dynamics David G. Anderson, Kirk Maasch, Daniel H. Sandweiss, 2011-07-28 The Middle Holocene epoch 8 000 to 3 000 years ago was a time of dramatic changes in the physical world and in human cultures Across this span climatic conditions changed rapidly with cooling in the high to mid latitudes and drying in the tropics In many parts of the world human groups became more complex with early horticultural systems replaced by intensive agriculture and small scale societies being replaced by larger more hierarchical organizations Climate Change and Cultural Dynamics explores the cause and effect relationship between climatic change and cultural transformations across the mid Holocene c 4000 B C Explores the role of climatic change on the development of society around the world Chapters detail diverse geographical regions Co written by noted archaeologists and paleoclimatologists for non specialists

Global Change and Terrestrial Ecosystems in Monsoon Asia T. Hirose, B.H. Walker, 2012-12-06 Forest vegetation is distributed in monsoon Asia continuously from boreal forests through temperate to tropical rain forests This vegetation the richest in the world is being subjected to global change on an unprecedented scale It has been predicted that boreal forests will experience the most significant change in response to global warming while tropical forests are endangered by rapid changes in land use due to high population pressure An increase in atmospheric CO2 concentration will severely affect ecosystem function in this area This volume presents a review of terrestrial ecosystems in monsoon Asia and assesses possible effects of global change on the structure and function of forest ecosystems and feedback routes to the global carbon cycle Audience Vital reading for plant ecologists vegetation scientists environmental managers and government decision makers

Environmental Management of Marine Ecosystems Md.

Nazrul Islam, Sven Erik Jorgensen, 2018-03-09 Ecosystem Based Management EBM is one of the most holistic approaches to protecting marine and coastal ecosystems as it recognizes the need to protect entire marine ecosystems instead of individual species. After decades of pollution, habitat degradation and overfishing, now climate change and ocean acidification threaten the health of the ocean in unprecedented ways. Environmental Management of Marine Ecosystems illustrates the current status, trends and effects of climate, natural disturbances and anthropogenic impacts on marine ecosystems. It demonstrates how to integrate different management tools and models in an up to date multidisciplinary approach to environmental management. This indispensable guide provides several case studies from around the world and creates a framework for identifying management tools and their applications in coral reefs, fisheries, migratory species, marine islands and associated ecosystems such as mangroves and sea grass beds. It discusses the physical and chemical compositions of marine ecosystems along with the threats and actions needed to protect them. The application of model framework to several contemporary management issues include the modelling of harmful algal bloom dynamics, understanding the dispersal of sea lice and the possible impacts on intertidal communities of the provision of novel offshore habitat. The results of extensive research by an international team of contributors, the Environmental Management of Marine Ecosystems is designed to inform scientists, practitioners, academics, government and non government policymakers on the particularities of marine ecosystems and assist them in understanding the EBM approaches in means of mitigation and adaptation of human activities that result in sustainability. These practices will help change the current methodologies used for resource assessment and the future regulations of marine resources.
