Trustworthy Global Computing Rocco De Nicola, 2005-12-13 This book constitutes the thoroughly refereed post proceedings of the International Symposium on Trustworthy Global Computing TGC 2005 held in Edinburgh UK in April 2005 and colocated with the events of ETAPS 2005 The 11 revised full papers presented together with 8 papers contributed by the invited speakers were carefully selected during 2 rounds of reviewing and improvement from numerous submissions Topical issues covered by the workshop are resource usage language based security theories of trust and authentication privacy reliability and business integrity access control and mechanisms for enforcing them models of interaction and dynamic components management language concepts and abstraction mechanisms test generators symbolic interpreters type checkers finite state model checkers theorem provers software principles to support debugging and verification Global Computing. Programming Environments, Languages, Security, and Analysis of Systems Corrado Priami, 2003-11-24 The goal of the IST FET proactive initiative on Global Computing is to tain models frameworks methods algorithms to build systems that are exible dependable secure robust and e cient The dominant concerns are those of handling the co ordination and interaction security reliability robustness fa uremodes and control of risk of the entities in the system and the overall design descriptionandperformanceofthesystemitself Completelydi erentparadigms of computer science may have to be developed to tackle these issues e ectively The research should concentrate on systems having the following characteristics The systems are composed of autonomous computational entities where tivity is not centrally controlled either because global control is

impossible or impractical or because the entities are controlled by di erent owners. The computational entities are mobile due to the movement of the physical platforms or movement of the entity from one platform to another The con guration varies over time For instance the system is open to the introduction of new computational entities and likewise their deletion The behavior of the entities may vary over time The systems operate with incomplete information about the environment For instance information becomes rapidly out of date and mobility requires information about the environment to be discovered Theultimategoaloftheresearchactionistoprovideasolidscienti cfoundation for the design of such systems and to lay the groundwork for achieving e ective principles for building and analyzing such systems **Trustworthy Global Computing** Gilles Barthe, Cédric Fournet, 2008-03-18 This book constitutes the thoroughly refereed post conference proceedings of the Third Symposium on Trustworthy Global Computing TGC 2007 it moreover contains tutorials from the adjacent Workshop on the Interplay of Programming Languages and Cryptography both held in Sophia Antipolis France in November 2007 The 19 revised papers presented together with 3 invited papers were carefully selected from 48 submissions during two rounds of reviewing and improvement The TGC 2007 symposium papers focus on providing tools and frameworks for constructing well behaved applications and for reasoning about their behavior and properties in models of computation that incorporate code and data mobility over distributed networks with highly dynamic topologies and heterogeneous devices The volume concludes with 3 tutorial papers presented at the co located Workshop on the Interplay of Programming Languages and Embracing Global Computing in Emerging Economies Ross Horne, 2015-11-20 This book constitutes Cryptography the refereed proceedings of the First Workshop on Embracing Global Computing in Emerging Economies EGC 2015 held in Almaty Kazakhstan in February 2015 The 13 revised full papers presented were carefully reviewed and selected from 28 submissions The papers focus on the topic in two ways one part is directly relevant to the problems of delivering cloud services in an emerging economy such as Kazakhstan the other part represents ICT innovation by scientists of the region

The New Global Ecosystem in Advanced Computing National Research Council, Policy and Global Affairs, Board on Global Science and Technology, Committee on Global Approaches to Advanced Computing, 2012-10-23 Computing and information and communications technology ICT has dramatically changed how we work and live has had profound effects on nearly every sector of society has transformed whole industries and is a key component of U S global leadership A fundamental driver of advances in computing and ICT has been the fact that the single processor performance has until recently been steadily and dramatically increasing year over years based on a combination of architectural techniques semiconductor advances and software improvements Users developers and innovators were able to depend on those increases translating that performance into numerous technological innovations and creating successive generations of ever more rich and diverse products software services and applications that had profound effects across all sectors of society However we can no longer depend on those extraordinary advances in single processor performance continuing This

slowdown in the growth of single processor computing performance has its roots in fundamental physics and engineering constraints multiple technological barriers have converged to pose deep research challenges and the consequences of this shift are deep and profound for computing and for the sectors of the economy that depend on and assume implicitly or explicitly ever increasing performance From a technology standpoint these challenges have led to heterogeneous multicore chips and a shift to alternate innovation axes that include but are not limited to improving chip performance mobile devices and cloud services As these technical shifts reshape the computing industry with global consequences the United States must be prepared to exploit new opportunities and to deal with technical challenges The New Global Ecosystem in Advanced Computing Implications for U S Competitiveness and National Security outlines the technical challenges describe the global research landscape and explore implications for competition and national security **Large-Scale Scientific Computing** Svetozar D. Margenov, Jerzy Wasniewski, Plamen Yalamov, 2003-06-30 This book constitutes the thoroughly refereed post proceedings of the Third International Conference on Large Scale Scientific Computing LSSC 2001 held in Sozopol Bulgaria in June 2001 The 7 invited full papers and 45 selected revised papers were carefully reviewed for inclusion in the book The papers are organized in topical sections on robust preconditioning algorithms Monte Carlo methods advanced programming environments for scientific computing large scale computations in air pollution modeling large scale computations in **Emerging Social Computing Techniques** mechanical engineering and numerical methods for incompressible flow Matthew N. as well as their application to the resolution of real life problems This book is suitable for academics scientists software developers and engineers interested in the grid and P2P paradigms **Worldwide Computing and Its Applications -**WWCA'98 Yoshifumi Masunaga, Takuya Katayama, Michiharu Tsukamoto, 1998-02-16 This book constitutes the refereed proceedings of the Second International Conference on Worldwide Computing and Its Applications WWCA 98 held in Tsukuba Japan in March 1998 This volume presents 14 invited and survey papers together with 20 papers selected by the conference committee The volume is divided into topical sections on distributed objects distributed componentware distributed systems platforms Internet technology mobile computing interculture technology collaborative media collaborative support information discovery and retrieval novel network applications Computing Statistics under Interval and Fuzzy Uncertainty Hung T. Nguyen, Vladik Kreinovich, Berlin Wu, Gang Xiang, 2011-11-03 In many practical situations we are interested in statistics characterizing a population of objects e.g. in the mean height of people from a certain area Most algorithms for estimating such statistics assume that the sample values are exact In practice sample values come from measurements and measurements are never absolutely accurate Sometimes we know the exact probability distribution of the measurement inaccuracy but often we only know the upper bound on this inaccuracy In this case we have interval uncertainty e g if the measured value is 1 0 and inaccuracy is bounded by 0 1 then the actual unknown value of the quantity can be anywhere between 1 0 0 1 0 9 and 1 0 0 1 1 1 In other cases the values are expert estimates and we only have fuzzy information about the estimation inaccuracy This book shows how to compute statistics under such interval and fuzzy uncertainty. The resulting methods are applied to computer science optimal scheduling of different processors to information technology maintaining privacy to computer engineering design of computer chips and to data processing in geosciences radar imaging and structural mechanics **Large-Scale Scientific Computing** Ivan Lirkov, Svetozar D. Margenov, Jerzy Wasniewski, 2006-02-15 This book constitutes the thoroughly refereed post proceedings of the 5th International Conference on Large Scale Scientific Computations LSSC 2005 held in Sozopol Bulgaria in June 2005 The 75 revised full papers presented together with five invited papers were carefully reviewed and selected for inclusion in the book The papers are organized in topical sections **High Performance Computing Systems and Applications** Robert D. Kent, Todd W. Sands, 2012-12-06 High Performance Computing Systems and Applications contains fully refereed papers from the 15th Annual Symposium on High Performance Computing These papers cover both fundamental and applied topics in HPC parallel algorithms distributed systems and architectures distributed memory and performance high level applications tools and solvers numerical methods and simulation advanced computing systems and the emerging area of computational grids High Performance Computing Systems and Applications is suitable as a secondary text for graduate level courses and as a reference for researchers and practitioners in industry **Service-Oriented Computing ICSOC 2006** Dimitrios Georgakopoulos, 2007-09-27 This book constitutes the workshops of the 4th International Conference on Service Oriented

**Programming Languages and Systems** David A. Schmidt,2004-03-18 This book constitutes the refereed proceedings of the 13th European Symposium on Programming ESOP 2004 held in Barcelona Spain in March April 2004 The 27 revised full papers presented together with the abstract of an invited talk were carefully reviewed and selected from a total of 118 submissions The papers deal with a broad variety of current issues in the specification analysis and implementation of programming languages and systems
