Microbiologists working in both the pharmaceutical and medical device industries face considerable challenges in keeping abreast of the myriad microbiological references available to them and the continuously evolving regulatory requirements. The Handbook of Microbiological Quality Control provides a unique distillation of such material by providing Quantitative Methods for Traditional Chinese Medicine Development. Shein-Chung Chow, 2015-10-15. In recent years many pharmaceutical companies and clinical research organizations have been focusing on the development of traditional Chinese herbal medicines (TCMs) as alternatives to treating critical or life threatening diseases and as pathways to personalized medicine. Quantitative Methods for Traditional Chinese Medicine Development is the first book entirely devoted to the design and analysis of TCM development from a Western perspective, i.e. evidence based clinical research and development. The book provides not only a comprehensive summary of innovative quantitative methods for developing TCMs but also a useful desk reference for principal investigators involved in personalized medicine. Written by one of the world's most prominent biostatistics researchers, the book connects the pharmaceutical industry, regulatory agencies and academia. It presents a state of the art examination of the subject for Scientists and researchers who are engaged in pharmaceutical clinical research and development of TCMs. Those in regulatory agencies who make decisions in the review and approval process of TCM regulatory submissions. Biostatisticians who provide statistical support to assess clinical safety and effectiveness of TCMs and related issues regarding quality control and assurance as well as to test for consistency in the manufacturing processes for TCMs. This book covers all of the statistical issues encountered at various stages of pharmaceutical clinical development of a TCM. It explains regulatory requirements, product specifications and standards and various statistical techniques for evaluation of TCMs, validation of diagnostic procedures and testing consistency. **Pharmaceutical Dosage Forms**
