Case-Based Reasoning Michael M. Richter, Rosina O. Weber, 2013-10-31 This book presents case based reasoning in a systematic approach with two goals to present rigorous and formally valid structures for precise case based reasoning and to demonstrate the range of techniques methods and tools available for many applications *Advances in Case-Based Reasoning* Peter Funk, Pedro A. González Calero, 2004-08-19 This book constitutes the refereed proceedings of the 7th European Conference on Case Based Reasoning ECCBR 2004 held in Madrid Spain in August September 2004 The 56 revised full papers presented together with an invited paper and the abstract of an invited talk were carefully reviewed and selected from 85 submissions All current issues in case based reasoning ranging from theoretical and methodological issues to advanced applications in various fields are addressed *Computational Logic in Multi-Agent Systems* João Leite, 2004-11-16 Over recent years the notion of agency has claimed a major role in defining the trends of modern research In unifying a broad spectrum of disciplines such as sociology psychology philosophy and many more the agent paradigm virtually invaded every sub field of computer science because of its promising applications for the Internet and in robotics Multi agent systems MAS are communities of problem solving entities that can perceive and act upon their environments to achieve their individual goals as well as joint goals The work on such systems integrates many technologies and concepts in artificial intelligence and other areas of computing There is a full spectrum of MAS applications that have been and are being developed from search engines to educational aids to electronic commerce and trade Although commonly implemented by means of imperative languages mainly for reasons of efficiency the agent concept has recently increased its influence in the research and development of computational logic based systems Computational logic by virtue of its nature both in substance and method provides a well defined general and rigorous framework for systematically studying computation be it syntax semantics and procedures or implementations environments tools and standards Computational logic approaches problems and provides solutions at a sufficient level of abstraction so that they generalize from problem domain to problem domain ordered by the nature of its very foundation in logic both in substance and method which constitutes one of its major assets *Case-Based Reasoning Research and Development* David W. Aha, Ian Duncan Watson, 2001-07-18 This book constitutes the refereed proceedings of the 4th International Conference on Case Based Reasoning ICCBR 2001 held in Vancouver BC Canada in July August 2001 The 36 revised full research papers and 14 revised full application papers presented together with 3 invited papers were carefully reviewed and selected from 81 submissions The papers address all current foundational and theoretical aspects of case based reasoning as well as advanced applications in a variety of fields , *Professional Practice in Artificial Intelligence* John Debenham, 2006-10-11 The Second Symposium on Professional Practice in AI 2006 is a conference within the IFIP World Computer Congress 2006 Santiago Chile The Symposium is organised by the IFIP Technical Committee on Artificial Intelligence Technical Committee 12 and its Working Group 12.5 Artificial Intelligence Applications

The First Symposium in this series was one of the conferences in the IFIP World Computer Congress 2004 Toulouse France. The conference featured invited talks by Rose Dieng, John Atkinson, John Debenham and Max Bramer. The Symposium was a component of the IFIP AI 2006 conference organised by Professor Max Bramer. I should like to thank the Symposium General Chair Professor Bramer for his considerable assistance in making the Symposium happen within a very tight deadline. These proceedings are the result of a considerable amount of hard work. Beginning with the preparation of the submitted papers, the papers were each reviewed by at least two members of the international Program Committee. The authors of accepted papers then revised their manuscripts to produce their final copy. The hard work of the authors, the referees and the Program Committee is gratefully acknowledged. The IFIP AI 2006 conference and the Symposium are the latest in a series of conferences organised by IFIP Technical Committee 12 dedicated to the techniques of Artificial Intelligence and their real world applications. Autonomous Robotic Systems 5 H. Asama, T. Arai, T. Fukuda, T. Hasegawa, 2012-12-06. The 6th International Symposium on Distributed Autonomous Robotic Systems DARS 2002 was held in June 2002 in Fukuoka, Japan, a decade after the first DARS symposium was convened. This book containing the proceedings of the symposium provides broad coverage of the technical issues in the current state of the art in distributed autonomous systems composed of multiple robots, robotic modules or robotic agents. DARS 2002 dealt with new strategies for realizing complex modular, robust and fault tolerant robotic systems, and this volume covers the technical areas of system design, modeling, simulation, operation, sensing, planning and control. The papers that are included here were contributed by leading researchers from Asia, Oceania, Europe and the Americas and make up an invaluable resource for researchers and students in the field of distributed autonomous robotic systems.

Intellectics and Computational Logic Steffen Hölldobler, 2013-04-18. Intellectics seeks to understand the functions, structure and operation of the human intellect and to test artificial systems to see the extent to which they can substitute or complement such functions. The word itself was introduced in the early 1980s by Wolfgang Bibel to describe the united fields of artificial intelligence and cognitive science. The book collects papers by distinguished researchers, colleagues and former students of Bibel's, all of whom have worked together with him and who present their work to him here to mark his 60th birthday. The papers discuss significant issues in intellectics and computational logic, ranging across automated deduction, logic programming, the logic-based approach to intellectics, cognitive robotics, knowledge representation and reasoning. Each paper contains new, previously unpublished, reviewed results. The collection is a state-of-the-art account of the current capabilities and limitations of a computational logic-based approach to intellectics. Readership: Researchers who are convinced that the intelligent behaviour of machines should be based on a rigid formal treatment of knowledge representation and reasoning. *Intelligent Data Engineering and Automated Learning-IDEAL 2006* Emilio Corchado, 2006-09-20. This book constitutes the refereed proceedings of the 7th International Conference on Intelligent Data

Defeasible Control in Dynamic Environments John-Jules Ch. Meyer,Jan Treur,2013-03-09 This volume the 7th volume in the DRUMS Handbook series is part of the aftermath of the successful ESPRIT project DRUMS Defeasible Reasoning and Uncertainty Management Systems which took place in two stages from 1989 1996 In the second stage 1993 1996 a work package was introduced devoted to the topics Reasoning and Dynamics covering both the topics of Dynamics of Reasoning where reasoning is viewed as a process and Reasoning about Dynamics which must be understood as pertaining to how both designers of and agents within dynamic systems may reason about these systems The present volume presents work done in this context extended with some work done by outstanding researchers outside the project on related issues While the previous volume in this series had its focus on the dynamics of reasoning processes the present volume is more focused on reasoning about dynamics viz how human and artificial agents reason about systems in dynamic environments in order to control them In particular we consider modelling frameworks and generic agent models for modelling these dynamic systems and formal approaches to these systems such as logics for agents and formal means to reason about agent based and compositional systems and action change more in general We take this opportunity to mention that we have very pleasant

recollections of the project with its lively workshops and other meetings with the many sites and researchers involved both within and outside our own work package
