Evaluating Natural Resources Use In Agriculture:

Evaluating Natural Resource Use in Agriculture Thyrele Robertson, Burton C. English, Robert R. Alexander, 1996

Handbook of Forest Resource Economics Shashi Kant, Janaki Alavalapati, 2014-04-03 It is increasingly recognized that the economic value of forests is not merely the production of timber. Forests provide other key ecosystem services such as being sinks for greenhouse gases, hotspots of biodiversity, tourism and recreation. They are also vitally important in preventing soil erosion and controlling water supplies as well as providing non timber forest products and supporting the livelihoods of many local people. This handbook provides a detailed comprehensive and broad coverage of forest economics including traditional forest economics of timber production, economics of environmental role of forests and recent developments in forest economics. The chapters are grouped into six parts: fundamental topics in forest resource economics, economics of forest ecosystems, economics of forests, climate change and bioenergy, economics of risk, uncertainty and natural disturbances, economics of forest property rights and certification and emerging issues and developments. Written by leading environmental, forest and natural resource economists, the book represents a definitive reference volume for students of economics, environment, forestry and natural resource economics and management.

Assessing and Restoring Natural Resources In Post-Conflict Peacebuilding David Jensen, Stephen Lonergan, 2013-02-15 When a country emerges from violent conflict, the management of the environment and natural resources has important implications for short term peacebuilding and long term stability, particularly if natural resources were a factor in the conflict. They play a major role in the national economy or broadly support livelihoods. Only recently, however, have the assessment, harnessing and restoration of the natural resource base become essential components of postconflict peacebuilding. This book, by thirty five authors, examines the experiences of more than twenty countries and territories in assessing post conflict environmental damage and natural resource degradation and their implications for human health, livelihoods and security. The book also illustrates how an understanding of both the risks and opportunities associated with natural resources can help decision makers manage natural resources in ways that create jobs, sustain livelihoods and contribute to economic recovery and reconciliation without creating new grievances or significant environmental degradation. Finally, the book offers lessons from the remediation of environmental hot spots, restoration of damaged ecosystems and reconstruction of the environmental services and infrastructure necessary for a sustainable peace. *Assessing and Restoring Natural Resources in Post Conflict Peacebuilding* is part of a global initiative to identify and analyze lessons in post conflict peacebuilding and natural resource management. The project has generated six books of case studies and analyses with contributions by practitioners, policy makers and researchers. Other books address highvalue resources, land, water, livelihoods and governance. Syria,

Natural Capital Peter

Kareiva, 2011-04-07 In 2005 The Millennium Ecosystem Assessment MA provided the first global assessment of the world's ecosystems and ecosystem services. It concluded that recent trends in ecosystem change threatened human wellbeing due to declining ecosystem services. This bleak prophecy has galvanized conservation organizations, ecologists, and economists to work toward rigorous valuations of ecosystem services at a spatial scale and with a resolution that can inform public policy. The editors have assembled the world's leading scientists in the fields of conservation, policy analysis, and resource economics to provide the most intensive and best technical analyses of ecosystem services to date. A key idea that guides the science is that the modelling and valuation approaches being developed should use data that are readily available around the world. In addition, the book documents a toolbox of ecosystem service mapping, modeling, and valuation models that both The Nature Conservancy and the World Wide Fund for Nature (WWF) are beginning to apply around the world as they transform conservation from a biodiversity-only to a people and ecosystem services agenda. The book addresses land, freshwater, and marine systems at a variety of spatial scales and includes discussion of how to treat both climate change and cultural values when examining tradeoffs among ecosystem services.
